1. HF DX Grid Hunting

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 01:00:29 UTC
From: rc@itchy.ncsl.NIst.GOV
Message-ID: <9501010100.AA05240@itchy.ncsl.nist.gov>
Source record: 254166

I have been wondering for some time why the HF DX crowd hasn't started chasing Grids. Serious DXers "ran out of countries" years ago (except for the few created from the USSR, and artificially manufactured ones). They'll run out of IOTA eventually; then what? GRIDS.

While the recent posting proposed an completely informal setup, the "audience" will surely want arbiters, wall-paper, etc.... There is already a field corps of VUCC QSL-card checkers, and the system seems to work well. If the League doesn't care to pick up the concept, maybe CQ or some Region 1 ham society will...

While W5FF has worked nearly all the continental USA 4-character grids on 6, the vast number of them world-wide should hold the HF DX crowd for quite a while.

73 de Bob w3otc@amsat.org

PS I have worked 434 4-character grids in 44 2-character fields on SIX METERS. Let's see, that's 19096 "points". Now, if I could get cards out of some of the difficult ones....

2. Free Cabinet rack

Newsgroup: rec.radio.amateur.misc

Heres the story. I have a cabinet rack
width 23 inches
Height 20 inches
Depth 16 inches
This is made to accept 19inch panels. Today these cost about 100 bucks.
Its all yours FREE FREE FREE Please take it out of here I need the room.
I am Tracy Diers w2oqk. You can reach me at 718-651-2798 or by Email
herbie@dorsai.org or by Email at herbie@ios.com. I am located in New
York City, Queens. Happy New Year.

4. Looking for a phone line interface (not a patch)

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 02:14:27 UTC
From: carndt@netcom.com
Message-ID: <carndtD1pFK4.Hvz@netcom.com>
Source record: 254155

What I'm looking for pointers to is a radio/phone interface that will ring trip, answer and connect a radio (2m, 440 etc) to the phone line thru a VOX and maybe a bucket brigade device. I already have a microprocessor simplex patch, but it doesn't do what I would like in this case. We have an in home phone system, and I would like to be able to call an extension and be on the air. That way I can monitor and use the radio from anywhere in the house w/out having to move the radio or extend the antenna feed.

73,

Chris KD6DSI

5. Yaesu FT-530 mods?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 03:33:45 UTC
From: Ed Ellers <edellers@delphi.com>
Message-ID: <xU+6QEh.edellers@delphi.com>
Source record: 254156

Does anyone have the details on how to unlock extended coverage on *late production* versions of the Yaesu FT-530 dual-band HT? My uncle just bought one; he has the mod sheet that was posted two years ago (it's on the Walnut Creek QRZ! CD-ROM), but he says that the connections on his rig don't match those listed.

>DE Frank C. Morris, N5YZM...

If you live in an area that doesn't have local access numbers for access and charge high fees for their 800 lines you might want to contact Prometheus Information Network Group (PING) at (800) 746-4835. They have 800 access lines to the Internet, slip/ppp for $5.40 an hour (9 cents/min).Which includes the 800 access and the IP connection. If you have to dial long distance you probably end up paying more than that.

Chris,

Look into AEA's HamLink unit. It does exactly as you want.

If you are talking about the 800 Mhz receive, forget it. It can't be done on
the late
production rigs as far as I know. I believe that the last lot number that
could be modified had a serial number that started with 4D.

Good Luck

Rick

12. Amateur Radio: Elmers List Info and Administrivia

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 12:00:22 UTC
From: pschleck@gonix.com
Message-ID: <radio/ham-radio/elmers/admin-1-788961618@gonix.com>
Source record: 254160
Cross-posted to: rec.radio.amateur.misc,rec.radio.info,rec.answers,news.answers

```
Posted-By: auto-faq 3.2.1.2
Archive-name: radio/ham-radio/elmers/admin
Revision: 1.10 10/30/94 22:07:48
Changes: Uniform Resource Locators (URL's) now used throughout

This administrivia file and the companion Amateur Radio Elmers Resource
Directory are intended for non-commercial distribution via Usenet. Any
other uses, please E-mail for permission.

[Special note: My E-mail addresses have changed, reflecting a move to
Greater Omaha Public Access Unix, which was motivated by a desire to
seek a stable site for the Elmers List for some time to come. See my
signature below for the new addresses. My old E-mail addresses, at the
University of Nebraska at Omaha, will probably work for the foreseeable
future, but are not guaranteed.]

In order to standardize the Internet resource notation used in this
Directory, I've decided to adopt Uniform Resource Locator (URL) format
throughout. In addition to being a straightforward, human-readable,
format for specifying File Transfer Protocol (FTP) archives, Gopher
and World-Wide Web (WWW) servers, and Usenet newsgroups, it is also
amenable to formatting as hypertext links in Hypertext Markup Language
(HTML). For example, users viewing this document at the Ohio State
World-Wide Web Server (see "How may I obtain the latest copy of the
Elmers List?" below) will see all URL's converted to hypertext links
on their WWW client. Rather than fumbling with the various
conventions of FTP, Gopher, WWW, and Usenet News software, the
document or directory referenced by a hypertext link is but one mouse-
click (or key-click) away.

Scott Ehrlich has graciously agreed to be a WWW Elmer and provide
further information about how to obtain and use WWW client software
such as Lynx and Mosaic (see his entry). While I'm happy to
incorporate the latest and most popular information-formatting
standards into the documents that I maintain, I really can't allow
myself to be dragged into the role of a WWW help-desk for all of the
Internet. Please understand this when I politely refer you to other
Elmers, easily-obtainable on-line documentation, or even local
expertise such as resident gurus, consultants, or help-desks at your
school, company, or information service provider.

I expect there to be a bit of controversy regarding my adoption of
this somewhat radical new standard, especially to many users who can't
or won't use WWW. Those users should be assured that I wouldn't have
adopted a standard unless it was easily human-readable by those
```

accessing this document as straight ASCII (which is one of the main reasons why the entire Elmers list isn't HTML, MIME, MMDF, or one of many other competing, mostly non-compatible, information formats). The URL format is easily mapped into human FTP, Telnet, Gopher, and Usenet News reader commands. For example:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/README

Anonymous FTP to ftp.cs.buffalo.edu and get the file README under the /pub/ham-radio directory.

gopher://oes1.oes.ca.gov:5555/

Access the Gopher root page at oes1.oes.ca.gov via non-standard port 5555 (if the standard Gopher port of 70 was used, the ":5555" part would be replaced by ":70" or most likely not appear at all).

telnet://callsign.cs.buffalo.edu:2000/

Initiate a Telnet (remote terminal) session with callsign.cs.buffalo.edu via non-standard port 2000 (if the standard Telnet port of 23 was used, the ":2000" part would be replaced by ":23" or most likely not appear at all).

news:rec.radio.info

Access the rec.radio.info newsgroup on your Usenet newsreader from your local news server.

URL's that start with:

http:

Are only accessible via WWW client software (which is why almost all http: URL's in this directory also have corresponding ftp: or gopher: URL's).

For more information about URL formats, see:

http://www.cc.ukans.edu/lynx_help/URL_guide.html
ftp://nis.nsf.net/documents/rfc/rfc1630.txt
http://info.cern.ch/hypertext/WWW/Addressing/URL/URI_Overview.html

Disclaimer: While I have personally confirmed the accuracy of all URL's through the Lynx WWW client, any referenced documents external to this document are subject to future changes beyond my control. In addition, with networks and their administration being what it is, many services with up-to-date URL's may be temporarily unreachable. Please consult with your local gurus, consulting staff, or help-desk to confirm that it's a non-local problem, then ask the Elmer him or herself (me in the case of URL's which appear outside of individual entries). The currency and accuracy of URL's should be at least no worse than that of the Elmers entries themselves (which are each individually confirmed by me every 2 years, and updated within 1 month on request of the Elmer).

A Brief Historical Overview:
++++++++++++++++++++++++++

If there is any one constant in the changing state of the communications art, it is that "Hams" (Amateur Radio Operators) have always been on the forefront of it. Rumors abound where the term "Ham" came from. Some of the more amusing are described in the list of Frequently Asked Questions for this newsgroup.

Regardless of origin of the name, a "Ham" is universally recognizable as one who experiments in radio and communications.

Whether it be constructing a low-power CW radio with vacuum tubes, or designing TCP/IP packet networks, such experimentation has historically spilled over into the mainstream such as was the case with Howard Armstrong, who developed the regenerative oscillator and FM radio, or General Curtis LeMay (W6EZV) who was instrumental in making Single-Sideband the communications standard for the Strategic Air Command (1947-1992, now reorganized into a joint command called USSTRATCOM) and eventually the U.S. Air Force. Although packet-switching techniques originated from DARPA (Defense Advanced Research Projects Agency) and the ARPANet, no one can deny the tremendous influence that amateurs have had in demonstrating the viability of TCP/IP and AX.25 communications via radio links. The efforts of AMSAT (the Amateur Satellite Corporation), including the development of many ham satellites and the low-orbiting Microsats (communications satellites no bigger than a breadbox that use store-and forward packet techniques), have certainly advanced the state-of-the-art in communications, one of the defined purposes of the Amateur Radio Service, as recognized by international treaty.

Since in many cases hams are writing "the book", there is often no "book" or other established reference for a beginner to refer to. Traditionally, information has been passed on from ham to ham via word-of-mouth. Like many of the traditional crafts, a variation of the Master-Apprentice system has emerged, the Elmer-Novice relationship. Called "Elmers" because they are usually older and wiser, having the benefit of many years in the hobby, including several failed projects, and an electric shock or two, they have traditionally been the mainstay of amateur radio, and the source of many new hams, particularly those interested in working on emerging technologies.

Even more importantly, Elmers provided an outlet for the impatient newcomer who wanted "to know everything, and right away." Faced with such a request, a good Elmer will smile and proceed to lead the novice through some project or operating experience. Several hours, days, or weeks later, the novice would have his answers, but would have earned them. Even better, the sense of accomplishment would boost the novice's confidence and nudge him or her down the road to being a model, experienced ham operator.

Many present hams feel that such an experience is missing today. In today's hustle-bustle world, the response to such natural curiosity and

desire to learn is, more often than not, "I'm too busy" or "RTFM." As a result, the quality of new hams declines and the knowledge and operating habits they develop in their first formative months and years leave much to be desired. And the very same hams who claim that they "can't understand the new generation" also, in almost the same breath, lament about the "decline of amateur radio."

What is an Elmer today?
++++++++++++++++++++++

An Elmer today is of any age, male or female, who has some expertise and is willing to share it with beginners. Elmers don't even need to be licensed amateurs, just people with knowledge in some area of electronics or communications technology.

What is a Usenet Elmer?
++++++++++++++++++++++

With the ever-widening scope of the Internet, and the amateur radio newsgroups on Usenet, the potential for Elmers to share their knowledge to a wide audience has never been greater. To that end, I have started to maintain a list of such Elmers. Volunteers need only send me their name, E-mail address, and area of expertise. I have set up an administrivia mailbox for this purpose (elmers-request@gonix.com, the default Reply-To: of this message).

Those desiring a more extensive list, or who need more specific assistance, are encouraged to contact Rosalie White, WA1STO, Educational Services Manager at the American Radio Relay League, 225 Main St., Newington, CT 06111 or via electronic mail addressed to rwhite@arrl.org.

How may I obtain the latest copy of the Elmers List?
++

There are currently 7 ways of obtaining the Elmers List. Any site at least reachable by Internet E-mail can use options 3 or 4:

1. Usenet News: The latest copy of the list can be found in the companion postings to this message, "Amateur Radio: Elmers Resource Directory [A-M]" and "Amateur Radio Elmers Resource Directory [N-Z]." Since the list is cross-posted to the following newsgroups:

news:rec.radio.amateur.misc
news:rec.radio.info
news:rec.answers
news:news.answers

on the 1st of each month, with an expiration date 6 weeks into the future, there should always be a copy available at most news sites. Check your newsreader documentation for information about reading previously-read articles or articles that are "threaded" to this one. Also complain to your local news administrator (E-mail to "news" or

"usenet" on your local host) if your local news server is configured to ignore Expires headers (and thus prematurely delete the articles) in worthwhile, mostly moderated, information newsgroups like those listed above.

2. Anonymous FTP: If your site is directly connected to the Internet, you may retrieve the latest copy via File Transfer Protocol (FTP) from the following sites:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/elmers/

3. Mailing-List: Since the list is cross-posted to rec.radio.info, the latest copy may be obtained from the mailing-list gateway for that newsgroup (along with many other informational articles about radio) when it is published each month. To subscribe, send E-mail to:

listserv@ucsd.edu

and in the BODY (not the Subject) of the message, write:

subscribe radio-info

The server may not be able to determine your return address. In that case write:

subscribe radio-info (your E-mail address)

You should get an acknowledgement very shortly.

4. Mail-Server: If you don't want to read through the entire gateway of rec.radio.info, or want a copy of the list right away, send E-mail to:

mail-server@rtfm.mit.edu

and in the BODY (not the Subject) of the message, write:

send usenet/news.answers/radio/ham-radio/elmers/admin
send usenet/news.answers/radio/ham-radio/elmers/index
send usenet/news.answers/radio/ham-radio/elmers/list/a-m
send usenet/news.answers/radio/ham-radio/elmers/list/n-z
send usenet/news.answers/radio/ham-radio/elmers/diff

and the latest copy of the list should be sent to you E-mail within 24 hours (the mail-server uses batch priority to reduce system demand).

The last three services are experimental. I'm not terribly familiar with them, and cannot offer much technical support regarding their use. (I'd appreciate feedback on whether or not you find them useful, though.)

5. Internet Gopher: The latest copy of the list should be available from the following Gopher sites:

gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/

see also news:comp.infosystems.gopher

6. World-Wide Web (WWW): The latest copy of the list should be available from the following WWW site:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/elmers

The advantage of reading the Elmers list at this site via WWW client software is that all URL's are converted to hypertext links.

see also:

news:comp.infosystems.www.misc
news:comp.infosystems.www.providers
news:comp.infosystems.www.users

7. Wide-Area Information Service (WAIS): The latest copy of the list should be available from the WAIS server at:

wais://rtfm.mit.edu/usenet

see also news:comp.infosystems.wais

How may I contribute to the Elmers List?
++++++++++++++++++++++++++++++++++++++

By using this resource, you are benefitting the net by obtaining assistance in the fastest and most efficient way possible. By volunteering to appear on this list, you are contributing to the good reputation of the radio-related newsgroups.

Thanks to all the volunteer Elmers, as well as courteous list users, for making this service a success.

John Ackerman AG9V

jra@lawdept.daytonOH.ncr.com -or- jra@ag9v.ampr.org

My primary interests are in packet radio network building (particularly
higher speed stuff) and TCP/IP. I've got quite a lot of info on using
the Kantronics D4-10 19.2kB radios, as that's the hardware we've been
struggling with here.

TAPR (Tuscon Amateur Packet Radio) has formed a special interest group
to discuss issues of regional packet networking (Net-SIG). As a result,
the TAPR net-sig mailing list was born, and is now ready for operation.

This list is <not> intended to replace any of the existing packet-related
mailing lists. Its purpose is provide a medium for communications among
those interested in packet radio networking, both dealing with technical
issues and political/regulatory ones. We'll discuss things like how the
potential 219MHz band will fit into the networking picture, how to link
areas using different networking schemes, how to set network parameters,
etc. The list's charter will be posted there regularly.

The address of the list is net-sig@tapr.org and you can subscribe by sending
mail to listserv@tapr.org with the text "join netsig".

Apart from subscribing to the list, you can contact me for further details
about the Net-SIG (including upcoming conferences).

(See also Bob Nielsen for more information about TAPR)

Joint ampr.org IP Coordinator for Ohio subnet (44.070.xxx.xxx)

Please direct all correspondence regarding the assignment of ampr.org IP
numbers in Ohio to:

ipaddr@ag9v.ampr.org
```

which is a mailing list read by a team of coordinators.

(See also Tony Schliesser)

Jay Appell --> KA1SNA

1976-1978 FCC Personal Users Radio Advisory Committee
Task force for rules Rewrite Citizens Radio Service
Rules Interpretation

1988-Present Stratus Computer/ Technical Support Engineer

I am CEO of Creative Media Productions a multimedia consulting
company.

Address: Jay_Appell@cac.stratus.com
Telephone: 1-508-478-6969 X200 at Creative Media Productions
1-508-478-1429 24 Hour Ham radio BBS and other topics

I enjoy SCA reception and multimedia use in Amateur Radio. If anyone would
like to reach me by modem, 508-478-1429 (24 Hr) BBS 14,400.

I have been referred to as the ham responsible for digital users manuals
in amateur radio. The first manual was the DJ-590 and subsequent manuals
included the 560,580 and 600 for Alinco. My contacts in the amateur radio
community have helped other amateurs to know more about products, hidden
features and new product offerings. The BBS will now include the latest
info on YAESU and ALINCO products. If you have a product that you wish to
have evaluated for the general amateur community, please contact before
sending.

If you have questions with regard to customer service at these
companies, please forward to me and they will be passed to the company
contacts.

PO Box 515
Millbury, MA 01527-0515

ATTENTION RADIO NEWCOMERS!

Are you interested in radio communications but don't have
enough information? Do you have questions but no one to
ask? Are you looking for a publication geared toward the
novice radio enthusiast?

***** FIRST CONTACT *****

"First Contact" is a newly forming publication. An
electronically distributed email newsletter via the Internet
for the beginner. Here is a forum to get the information
you're craving. Get involved in this fascinating hobby!
Scanning, ham radio, shortwave listening, CB radio,
General Mobile Radio System (GMRS), etc. will all be
covered.

You input is essential to the success of this publication. I
need to know what you want to know and what subjects
you want covered in the newsletter. I will attempt to
publish on a monthly basis, possible bi-weekly if there is
enough interest.

The only "cost" on your part is to fill out a subscription form
completely (E-mail for a copy). A classified section is being
contemplated with a small fee to advertise. Hard copies
will be available to those without email access. Please
contact me for details.

Everyone is welcomed to subscribe whether you've never
turn on a radio or whether you're an old-timer. I am
looking for authors to contribute short articles on the
subjects you request.

So let's get "First Contact" off to a good start! Get your
radio information via email. Subscribe NOW!

Tom Bruhns K7ITM

tomb@lsid.hp.com

Electronic Circuits
Antennas and Transmission Lines

My electronics expertise is mostly analog, but I have some insights into
DSP applications that can do better in what used to be the analog
dominions. I can be of the most help with low-frequency analog stuff,
particularly measurements and low-level/low-noise/low-distortion
applications. I breadboard with IC's, discretes, and surface mounts
(which I prefer to use now, as surface mounting requires less drilling
of PCB boards once they are etched). My electrical engineering
education (Ph.D.) emphasized control systems. I also have a clear
understanding of transmission line measurements and behavior (a
personal research interest for the last 25 years or so).

ampr.org IP Coordinator for Arizona subnet (44.124.xxx.xxx)

[Editor's note: All ampr.org coordinators are listed in the document at:

ftp://ftp.cs.buffalo.edu/pub/ham-radio/ampr_coordinators

]

Owner of the Land-Mobile-Radio Mailing List

The purpose of this list is to allow discussion about commercial land-mobile radio equipment, its use and maintenance.

Owner of the Military Affiliate Radio Service (MARS) Members Mailing List.

The purpose of this list is to allow discussion about MARS (Military Affiliated Radio Service) activities. The list is open to all branches of MARS.

To subscribe to or unsubscribe from either of the above lists, please send electronic mail to:

listserv@stat.com

and include the command:

subscribe list-name

or

unsubscribe list-name

as the first line of your message, where list-name is either land-mobile-radio or mars-list. An acknowledgement/welcome message should follow very shortly.

Moderator of rec.radio.info newsgroup

Please direct all rec.radio.info submissions to rec-radio-info@stat.com and all feedback and administrivia to rec-radio-request@stat.com.

For more information about rec.radio.info, see:

Roy Engehausen AA4RE

enge@almaden.ibm.com

AA4RE Packet BBS

Poster of RACES Bulletins

Thanks to Chris Spell <spell@seq.uncwil.edu>, there is now a mailing
list for AA4RE BBS program sysops. I hope all will subscribe. It
should be very helpful to all of us.

To send a message to the mailing list send it to:

aa4re@matsci2.uncwil.edu

To subscribe to the mailing list a user needs to send a message to:

aa4re-request@matsci2.uncwil.edu

With the following in the body of the message:

subscribe aa4re your_account_name@your.address.wherever

To unsubscribe one would send this text in the message:

unsubscribe aa4re your_account_name@your.address.wherever

++

Scott Ehrlich, Amateur Radio Callsign: WY1Z
How to reach me: wy1z@neu.edu [Internet], wy1z@wa1phy.ma [Packet]
Boston ARC FTP archives: ftp://oak.oakland.edu/pub/hamradio/
Boston ARC Web page: http://www.acs.oakland.edu/barc.html

I've played around with Mac and PC hardware, as well as dabbing a
little with DOS, UNIX, MacOS, with a tad of VMS operating systems.

I co-maintain the Boston Amateur Radio Club anonymous FTP file archives
with Phil Temples, K9HI (k9hi@netcom.com).

A sampling of the archives include:

A virtually complete archive of all ARRL bulletins since 1992 is
available at ftp://oak.oakland.edu:/pub/hamradio/barc/w1aw-list/

A mirror of all files available from the ARRL info server is also
available: ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/

The ARRL infoserver mirror has FCC Part 97 (U.S. Amateur Radio Service
Rules and Regulations) at:
ftp://oak.oakland.edu/pub/hamradio/arrl/infoserver/rib/part97.txt

Programs mentioned in QST are in:
ftp://oak.oakland.edu/pub/hamradio/arrl/qst-binaries/

Amateur Radio Newsline is now also being archived, too:
ftp://oak.oakland.edu/pub/hamradio/docs/newsline/

Mike Ardai, n1ist@netcom.com, runs the following Boston ARC mailing lists:

newsline-list (Amateur Radio Newsline)
w1aw-list (ARRL Official Bulletins)
letter-list (ARRL Letter)

ky1n-list (KY1N VEC listing, Local Boston area VE sessions)
barc-list (local Boston-area stuff)
barc-races (again, local)
fieldorg-l (ARRL Field organization discussions)
ham-tech (Untamed technical discussions about the hobby)
fox-list (local Boston stuff - T-hunting)
qrp-l (QRP, or low power, radio, previously maintained by Bruce
Walker at think.com)
arrl-exam-list (amateur radio license examinations scheduled in the US and
in some foreign areas.)
arrl-ve-list (ARRL VE Announcements, run by ARRL VEC Bart Jahnke)

To join any or all of the above:

Send a message to: majordomo@netcom.com
In the body of the message, type: subscribe list_you_want

Ham Radio and More, the radio show carried live every Sunday (6pm - 7pm
EST) on the Talk America Radio Network, now has a World Wide Web home page:

http://www.acs.oakland.edu/barc/ham-more/ham-more.html

The Boston Amateur Radio Club also has a World Wide Web Home Page:

http://www.acs.oakland.edu/barc.html

Due to the popularity of the KY1N VE listing and W1GSL's hamfest list,
I have incorporated both of these listings into the Boston Amateur Radio
Club's Web page:

http://www.acs.oakland.edu/barc/ne-happenings.html

With the cooperation of the Boston Amateur Radio Club, I have put
together a World-Wide Web page for the American Radio Relay League
(ARRL).

Since the ARRL does not yet have web capabilities of their own, this page
is being offered on the same site as the Boston Amateur Radio Club's web
page.

The address to access the page is:

http://www.acs.oakland.edu/barc/arrl.html

It has pointers to the ARRL Letter, E-mail addresses of HQ staff,
official League bulletins, and much more!

You will need Lynx, WWW, or Mosaic to view them (or you may obtain a
copy of the page via E-mail; send a message to listserv@info.cern.ch
with the word "help" in the body for more information). Ask me for
more details about this.

I can assist anyone with most PC installation/troubleshooting
problems. I have a good deal of experience installing and configuring
OS/2, have a good grasp of Unix (not a wizard yet though :), and a
thorough familiarity with the ISA bus and the cards that go in it.

On the radio side of things, I like digital modes and experimenting with
antennas, specifically:

- PACTOR and AMTOR
- Configuring Kantronics All-Mode (KAM) TNC's for proper operation
- Over a decade of packet experience, including setting up both DOS and
OS/2 versions of KA9Q NOS
- HF wire antennas, including 160m full-wave delta loops

ARRL Laboratory Engineer

Radio Frequency Interference (RFI) matters
Equipment Testing

My survey of automotive EMI problems is mostly complete. The results are in September 1994 QST, including warranty and customer service information for most automobile manufacturers (many of whom have published installation guidelines).

I am also continuing to pursue more formal contacts and standards-making through the EMR and EMI Standards Committee of the Society of Automotive Engineers (SAE), of which I am a member.

Copies of General Motors installation guidelines are available. Saturn allegedly has a video on mobile installation, but none of the dealers seem to know about it. I have a call into one of my low friends in high places. :-)

If anyone would like a copy of the GM installation guidelines, send a 9X12" SASE with two units of postage *and* a specific request for the "GM Installation Guidelines" to the ARRL Technical Department Secretary, 225 Main St, Newington, CT 06111. A copy has been reprinted in the ARRL book -- Radio Frequency Interference -- How to Find It and Fix It.

EMI/RFI Resource List and RFI Tips package available. A business SASE with 98 cents postage is appreciated. Please specify the desired documents in your correspondence.

The FCC has released the results of a telephone interference survey just completed.

If you would like a copy of the survey, which includes a list of telephone models checked, send an SASE with two units of first class postage to the Technical Information Service at ARRL HQ. Alternatively, you may obtain an electronic copy from the info server below.

If anyone is having a problem with CATVI, send a 9X12" SASE with 4 units of postage to the ARRL Technical Department Secretary. Ask for the "EMI/RFI Package" and "EMI/RFI - CATV." The CATV package includes a reprint of the article I wrote for Communications Technology -- the journal of the Society of Cable Television Engineers. Your local cable company will recognize this publication and will give credence to the words therein.

If you have any questions after you have read the material, contact me here at HQ. I can usually get back to you within a few days to offer some additional help.

Many amateur radio informational documents (including EMI/RFI files) are also available from the ARRL info server. Send E-mail to info@arrl.org with the word "HELP" in the message body.

ARRL info server files may also be accessed via anonymous FTP at:

ftp://oak.oakland.edu/pub/hamradio/arrl/

Mobile Antenna Systems and Installation

An FAQ list for the rec.radio.amateur.antenna newsgroup is being contemplated. Please direct all submissions, feedback, and administrivia to my E-mail address above. Volunteer co-editors are most welcome.

BOATANCHORS CHANGEOVER RELAY GOES "KER-CHUNK"!!!

Greetings and welcome to the new and improved (but still vintage) "boatanchors" mailing list. An automated list manager should help things run more smoothly for everyone while still providing the same outstanding signal-to-noise ratio we have enjoyed since the list's beginning.

I have agreed to provide a new home for the list, with the blessings
of Paul Prescott N1AAC who took over from Our Esteemed Founder Jim
Lockwood KM6NK.

NOTE - You need not re-subscribe or take any special action other than
noting the new addresses listed below. The subscription list was moved
intact from the old mit.edu site and you are already on it if you got
this message.

Subscribers of the satellite list on boatanchors@beacons.cts.com will
also be moved to this new address.

The new mailing list address is now

boatanchors@ThePorch.com.

Use this now for messages of general interest to the entire group
Please don't use it to subscribe, change address, etc.

The new automated list manager address is

ListProc@ThePorch.com

Use this for subscribing, unsubscribing, getting archived info,
getting the FAQ message, changing your address, etc.
Now send a message to ListProc@ThePorch.com with just
HELP in the body to get info on how to do this.

The new list owner address is

ListOwn@jackatak.ThePorch.com

Use this address only when there is a problem which really
truly can't be resolved otherwise.

Raleigh, NC 27695-7620

rdkeys@csemail.cropsci.ncsu.edu

de NA4G, "Boat Anchor Bob", an ol' cw fart .....

If I can be of assistance in older equipment, junk-boxing
your way to hamdom, the cheapskate's approach, let me
know.

22 yrs a ham, extra class, mostly cw, mostly boat anchors
and radio in the traditional sense.

{Telegraphy has been in my family for almost 100 years!}

CWISTS Friday Night Fist Function

Standard time: Friday Nights at MIDNIGHT LOCAL TIME

Standard freq: 80 meters --- 3702.5 khz for all hands.
40 meters --- 7102.5 khz alternate, for all hands
(between the heterodynes)
(someone scout out a better QRG)

Standard calling signal: CWIST IMI DE <yourcall> K (if there
are no control stations calling for
you to check in), or,
CWIST DE <yourcall> K (if there is a
control station inviting checkins)
(The alternative check in for those OTs
with salt behind the ears is a simple
DE to get the control station's ears
followed by DE <yourcall> K when the
control station acknowledges.)

Note: A simple informal net style protocol will generally be
used, unless no control station assumes control for the
evening, in which case it is an open roundtable format
discussion group.

Note: The midnight local time gathering is designed to maximize
the number of checkins spread out over the world, so less
confusion and more checkins are heard. The hope is that
someone will be aboard almost anywhere and be heard at
least locally, anywhere in the world.

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
applicable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the

technology of radiotelegraphy.

Author of NA4G's National Electrical Code for Hams

ABSTRACT

This work was presented as a talk to the Homebrew Special Interest Group (HB-SIG) of the Raleigh Amateur Radio Society (RARS), on 15 January, 1991 and was revised for another presentation on 26 January, 1994.

This document contains excerpts of the National Electrical Code (NFPA 70-1990) that, in the author's opinion, apply to the installation of amateur radio equipment as would commonly be found in most amateur radio stations. Direct excerpts from the Code are contained within inset quotations. Paraphrased excerpts from the Code are itemized. The author's interpretation and discussion of the Code is set full-width. The author's interpretation and discussion of various sections of the Code is not meant to be all-encompassing, nor the official interpretation of the National Fire Protection Association, nor of any official governing body having legal authority of jurisdiction over electrical installations, but is meant to be used as a teaching tool for amateur radio operators.

For ease of access, the group of files have been 'rolled into one'...

ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq/

and

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/cb-faq/top.html
ftp://rtfm.mit.edu/pub/usenet/news.answers/radio/cb-faq/

Please direct all FAQ submissions, feedback, and administrivia to
hamradio-faq@kluft.com or cb-faq@kluft.com.

As with any volunteer effort, new volunteers are often needed. We need
new editors to post the above FAQ's. Preferably this should be
someone who has enthusiasm for hobbyist radio, experience with UseNet, and
the ability to work with the other editors. No single person can know
all the various aspects of these diverse hobbies so the editorial review
groups are intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is
written in PERL. So it would be a plus for volunteers to post the
FAQ to have PERL installed on their system and be able to use "cron"
or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer
should contact one of the above administrivia addresses.

A mailing list for rec.radio.amateur.* FAQ and Netiquette posting
maintainers, as well as anyone with a sincere interest in helping
keep the rec.radio.amateur.* newsgroups the friendly and useful
forums they are today, is also available. To subscribe, send E-mail
to rra-wg-request@amdahl.com.

++

Steven M. Knapp KA9QOA Computer Engineering Senior
sknapp@iastate.edu Vice President Cyclone Amateur Radio Club
Iowa State University; Ames, IA Durham Center Operations Staff

A few members of our ham radio club were interested in helping out.
Since our turnover is usually 4 years or so (graduation is a horrible
thing), I thought it may be difficult for us to keep the list up to
date. I thought that by creating a local mailing list called
"elmers@iastate.edu" we could add or remove people as need be. There
would always be at least one person receiving mail on that list,
usually more! Even after I graduate, this list will be maintained
allowing ISU hams to easily help others.

Currently we have people with packet experience, some HF experience,
much repeater experience, in addition to a considerable background in
theory, as many here are electrical engineering or computer engineering
students. If a question can not be answered by the readers of the list,
there are many other local hams that could be prodded for the info.

Our local ham radio club has been especially interested in helping local
disabled hams (or hams to be) get on the air. But anyone local who
needed help would find a group at their door ready to work.

| Vending machines should NEVER NEVER| SMTP thing: m.knell@unicorn.nott.ac.uk |
| EVER eat money. - RFC1288 (Finger) | AX25 thing: G7GPA@GB7COV.#29.GBR.EU |
+----------- These are my opinions, not anybody else's, so bog off. ----------+

There is now a mailing list set up for the UK TCP/IP Networking Group
(UKIP). This is a loosely-organised group set up to promote the use of
TCP/IP networking protocols over radio in the UK, and to encourage the
establishment of high-speed backbone links and network gateways.

If you want to subscribe:
Send mail to ukip-request@cs.nott.ac.uk. This is handled by a
human rather than a listserver, so be polite :-)

To post to the list:
Send mail to ukip@cs.nott.ac.uk. Subscription requests and other
administrative bits and bobs should go to ukip-request, _not_ to
the list as this just means that lots of people read your
subscription message and get cross.

I can personally answer quite a lot of the questions about TCP/IP-related
subjects.

Be forewarned that the list is fairly technical in its discussions, so
probably not the best place for beginners to start :).

Fred Lloyd, AA7BQ flloyd@qrz.com
Scottsdale, Arizona | finger flloyd@qrz.com for PGP Key | http://www.qrz.com
----

Author of the QRZ! Ham Radio CDROM. Interested in receiving amateur
radio related public domain and/or shareware programs, data files,
frequency lists, etc., that would make a useful edition to the QRZ
CDROM. Can help arrange volume discounts for clubs and groups,
and will donate copies of QRZ to qualifying non-profit organizations.
Send E-mail or call +1 602 483-2036.

We now have the QRZ FTP archive and QRZ WWW server online, 24 hours a day. Our connection is via a T1 line so you should get pretty decent file transfer times.

We've got about 7,000 files online, including radio mods, software, most everything imaginable. We are also accepting uploads of all ham radio related material.

Feel free to stop by and have a look:

ftp://ftp.qrz.com/
http://www.qrz.com/ (WWW interface to the FTP archive as well as an Callsign database server)

(W) +1 713 770-1836 (6:30am to 3:30pm Central Time)

I have a collection of service information and literature dating back
to the 1920's. I will be happy to assist those needing copies of
out-of-copyright information for specific makes and models of
receivers, transmitters, test equipment, etc..

The collection spans commercial, amateur, and military surplus gear of all
types. Unfortunately I have not taken the time to catalog all this
information, but it is logically filed by make, model, etc.

If you need service information for a specific piece of equipment,
(and I have the information in my collection) I will research and copy
it for you. Cost will vary depending on the time required to find the
information and the amount of pages to be copied. I estimate 10 pages
or less at $1.00/page including US postage. I will quote on larger
manuals.

This is NOT my career or a business. Any requests must be prepaid or I will
ship COD at additional postage costs.

Peter Reynolds reynolds@stc.nato.int CompuServe: 100276,1340
voice: +31-70-314-2401 fax: +31-70-314-2111 radio: KE4BAD
Senior Scientist, Radio Branch, Communications Division
SHAPE Technical Centre, PO Box 174, 2501CD The Hague, The Netherlands

I am very lucky in that I earn my living in radio communications, so my expertise is fairly broad (but not focused on amateur techniques only):

Modulation types - FSK, PSK, MSK
Error control - various types of ARQ and FEC systems
RF - Antennas, HF propagation
Networking - TCP/IP over HF
Frequency bands: VLF, LF, HF, VHF, UHF, SHF

This is a very brief synopsis of the areas that I have dealt with over the years. I always enjoy discussing and researching a communications problem so if you don't see it listed above drop me a line anyway, especially if you happen to be in Europe.

Bob Salnick, Spokane,WA | USENET: oliveb!isc-br!tau-ceti!DejaVu!salnick
Amiga 1000, WB 1.3 | INTERNET: salnick@DejaVu.spk.wa.us
WA9BVE |

I can help people with HF stuff, cheap antennas, and am willing to help
troubleshoot problems with rigs.

I believe that one of the pillars of ham radio - construction/
understanding at the burn-your-hand-with-a-soldering-iron level - is
drifting out of ham radio. With Japanese radios which cost so much,
fewer and fewer hams are willing to risk their warranty to service their
own equipment. I would like to see a turn-around here...

Paul Williamson KB5MU

kb5mu@amsat.org

I'm not the author of InstantTrack itself, but I was extensively involved in its testing. I'm the author of OrbitDRV (the tracking TSR that comes with InstantTrack) and a number of other InstantTrack auxilliary programs.

AMSAT-NA (the Radio Amateur Satellite Corporation in North America) operates the Internet host AMSAT.ORG to provide for efficient communications between people interested in the amateur satellite program. At this time two services are provided: a message remailing service and a mailing list service.

In the future, an archive of files will be accessible by anonymous ftp or possibly by email. In the meantime, check the FTP site:

ftp://ftp.ucsd.edu/hamradio/

for AMSAT-related files. Consult your local guru for help on using anonymous ftp.

The message remailing service permits users to send each other mail on the Internet without keeping track of each other's Internet address. The remailing service allows each user to receive mail sent to the address callsign@amsat.org, where callsign is that user's amateur radio callsign, or other unique identifier. Mail sent to that address will be routed first to the AMSAT.ORG host at UCSD in San Diego, then remailed from AMSAT.ORG to the network address specified by the user. In most cases, this process delays the message by only a very few minutes.

The mailing list service groups subscribers into mailing lists to receive certain types of messages. There are public mailing lists available to anyone, and private mailing lists available only to certain people (for example, AMSAT Board of Directors members or PACSAT command stations). Currently the following public mailing lists exist:

ANS AMSAT News Service

This mailing list carries official news releases from the AMSAT News Service. These messages are posted in a form suitable for direct posting to a packet radio BBS system. Each message contains a Bulletin Identifier (BID), which permits the message to be introduced into the packet network at many places without resulting in duplicate bulletins at any BBS. The primary purpose of this mailing list is to distribute ANS bulletins for redistribution (via the packet net or on AMSAT voice nets), but individuals may also subscribe for their own use. If your local packet BBS doesn't seem to get the ANS bulletins reliably, you are encouraged to post the ANS bulletins yourself.

Only authorized AMSAT News Service personnel should send messages to the ANS mailing list.

AMSAT-BB AMSAT bulletin board

This mailing list carries general AMSAT information. This information may NOT be suitable in content for transmission via amateur radio, so automatic reposting of AMSAT-BB messages to packet radio BBS's is discouraged. The purpose of this mailing list is to provide a forum for general discussion of any satellite-related topic.

Anyone may send messages to the AMSAT-BB mailing list. Simply address your message to amsat-bb@amsat.org, and it will be automatically forwarded to all subscribers to the AMSAT-BB mailing list.

Editors of publications should ask permission of the
sender before publishing anything seen in AMSAT-BB
elsewhere, unless the posting was obviously a public
press release. However, posters should realize that
anything posted to AMSAT-BB is essentially public.

KEPS Keplerian Elements mailing list

This mailing list carries official postings of Keplerian
element sets for satellites of interest to radio amateurs.
Like the ANS bulletins, these messages are posted in a
form suitable for direct posting to a packet radio BBS.

Only authorized AMSAT News Service personnel should
send messages to the KEPS mailing list.

NASAINFO NASA related information mailing list

This mailing list contains information about current
and planned NASA space missions. Be forewarned: at times
this mailing list delivers many large messages.

SAREX Shuttle Amateur Radio Experiment mailing list

This mailing list contains information and press releases
pertaining to SAREX missions.

To obtain any of these services, just send a message to the address

listserv@amsat.org

This address may be reached from CompuServe MAIL as:

>INTERNET:listserv@amsat.org

For the moment, the maintenance of the AMSAT.ORG mailing lists and
remailing aliases is done manually. Later, this service will
probably be automated and you will have to follow a strict message
format. For now, you may send requests in free format. They will
usually be processed within a few days. In general, you will not
receive an explicit reply to your request. Be sure you specify:

1. Which mailing list(s) you want to receive

2. Your callsign, if any

3. The Internet address to be used, if different from the
one in your From: header.

You should not send messages about your subscriptions to any of the
mailing lists. Send them to listserv@amsat.org instead. This
includes questions, requests for changes, requests for information
about mailing services, and complaints.

The list of amateurs who may be reached via the message remailing
service may be obtained by requesting the "address book". Note that
the address book as distributed contains only the callsigns of the

available addressees, not their actual Internet addresses. The address book is updated occasionally, and does not necessarily contain the very latest information.

You may request to be added to the list, to be deleted from the list, or to have your Internet address changed on the list. Please include your callsign if you have one. If you don't have a callsign, that's OK, but please say so. If you have more than one Internet address you want to have available on the AMSAT.ORG remailer, you may so specify. For instance, if you have a regular Internet address and a CompuServe account, you may appear in the address book as both w1xyz and w1xyz-cis. Mail sent to w1xyz would go to your Internet address, and mail sent to w1xyz-cis would go to CompuServe. MCImail accounts have the form w1xyz-mci, and so on.

You may also subscribe or unsubscribe to any of the public mailing lists described above. Send a message to listserv@amsat.org, specifying clearly which mailing list(s) you want to add or drop, and giving your callsign if you have one. When you subscribe to a mailing list, you will automatically be added to the remailing service as well, because the mailing lists are maintained by callsign. If you have more than one address listed in the remailing service, please indicate which one(s) you want the mailing list messages sent to.

Additional mailing lists, public or private, can be set up as needed. Send mail to listserv@amsat.org for details.

Questions about any service offered by AMSAT.ORG may be directed to listserv@amsat.org as well.

Conway Yee N2JWQ
yee@mipg.upenn.edu
2144 East 21 Street
Brooklyn, New York 11229

Maintainer of the Universal and Free Listing of Repeaters for Radio Amateurs

This listing with all the data is available for anonymous FTP from:

ftp://mipg.upenn.edu/pub/yee/rptr010.Z

An experimental search and submission front-end is available at:

http://www.acs.ncsu.edu/HamRadio/scripts/repeaterdb.perl

As far as I am aware, all the data is freely redistributable and my
intent is to make sure it stays that way. For this reason, I have
applied the GNU General Public License.

The repeater project will now include repeaters from ALL bands and
is not limited to the US. This reflects the intent to make this
directory universal.

Contributions of data may be made by anonymous ftp to:

ftp://mipg.upenn.edu/pub/yee/uploads/

or via email to yee@mipg.upenn.edu

The data format has not been changed from the old format so
contributions that you were planning to make (prior to my recent

troubles) are still current and most welcome. This repeater listing will be of use if people take an active part in making it accurate and useful.

WC> And last, the cost. With a new postal increase hanging
WC>over all our heads, the costs are getting high.

Really? Going from 19 cents to 20 cents for a postcard is only
a 1 cent rise in cost!

WC> I myself QSL 100%. If I get a card, the other person
WC>always gets one back.

Yes, same here 100%. there was only one very brief period in my
hamming career that I couldn't QSL.

WC> While we are on the QSL subject, has anyone given
WC>thought to the idea of a DOMESTIC QSL service? Some league
WC>officials had suggested the idea, and I was wondering what
WC>everyone thought of it.

I think it has been done, and may still be being done.
It could save all of us a LOT of money. Seems like it could be a good
business for some enterprising ham too!

WC> In closing, I think QSLing is one of the traditions
WC>than no one can really argue with. You could sit here and
WC>argue about CW and AM untill you are blue in the face, but
WC>QSLing applies to all aspects of ham radio and is one tradition
WC>worth holding on to.....

Right on!
No doubt SOMEONE SOMEWHERE will have a gripe against it, but I love
collecting QSLs ... always have!

&#65533; SLMR 2.1a &#65533; Who'd a' thunk it!

>licensing system with full privileges for all??

Yes, that's exactly what I have in mind. I even have a modest suggestion
for a name for the class, we could call it "amateur". For those who
simply must have wallpaper to confirm their self worth, the ARRL could
offer a series of certificates of varying technical difficulty, and
even Morse Code speed runs, if that seems of any interest.

19. Shuttle Comms

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 16:54:00 UTC
From: Roger.Cravens@f239.n109.z1.fidonet.org
Message-ID: <a99_9501012009@blkcat.fidonet.org>
Source record: 254046

I went to Florida last summer and quite by accident, the Shuttle was scheduled to take off. My and wife and I both stood with jaws hanging down to our belt buckles over this incredible piece of human engineering. I was fortunate in that I had my 200XLT with me, but with very, very few frequencies.

This year, I believe I'm loaded for bear. Going back on vacation, _BUT_, will be taking my 200XLT/PRO-2006/ICOM R-71A HF Receiver, and for reception, my Scanner Beam and Scantenna for the two scanners, and a roll of 17 gauge aluminum wire (and a sling-shot to get it over a tree somewhere).

Now, since I am now hardware rich, but frequency poor in this particular
area, I am asking for and would seriously appreciate any and all frequencies for the shuttle, launch pad, going up, coming down, and all phases in between.

Also, if anyone has the 1995 summer schedule (from around May through August), would also appreciate that, too.

Thank you ever so much!

Roger

Steve,

The orbit for RS-15 is currently being determined. The following
info is pretty accurate:

Satellite: RS-15
Object Number: -31157
NASA Designation:
Epoch Time, T0: 94 360.2714005
12/26/94 06:30:48.99 UTC
Epoch Rev, K0: 2
Mean Anomaly, M0: 0.92710°
Mean Motion, N0: 11.27503470
Inclination, I0: 64.83140°
Eccentricity, E0: 0.01757800
Arg Perigee, W0: 310.13100°
R.A.A.N., O0: 174.61680°
Beacon Frq, F1: 29.3520.0000
Decay, N1: 0.00000e+000
Decay, N1: 0.00000e+00

A few more comments:

Name: RS-15
Launch: Rokot vehicle, refurbished SS-18. Baikonur
Orbit: altitude 2300 km
inclination 67 deg.
Uplink: 145.857 - 145.897 MHz
Downlink: 29.357 - 29.397 MHz, Power 5 W
Beacon #1: 29.398 MHz, CW, Power 0.4 or 1.2 W
Beacon #2: 29.353 MHz, CW, Power same as Beacon #1
BulBoard: 2 Kbytes, CW
Antennas: Dipoles
Weight: 70 kg
Atitude: No space stabilization.

Hope this helps.

22. Re: how do you exchange QSL cards ?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 17:23:38 UTC
From: tigger@prairienet.org
Message-ID: <3e6oeq$90a@vixen.cso.uiuc.edu>
Source record: 254170

In a previous article, wcoyle@delphi.com () says:

>One thing when QSL ing to consider is that if you work a
>novice, or a new general op, that person may not have QSL's
>printed up yet. By the time I got my QSL's printed, I had
>racked up over 100 QSO's and I had allready recieved about 20
>cards. Some other things to consider in the QSL game

This is a valid point. In addition to that, I'll usually let my "SASE Required" rule slide if I work a new guy, because he doesn't know the etiquette yet. This is a chance for education. I don't slam a guy just because he doesn't know something...I'll send him a card along with a note that sez, "SASE next time, OK?" I've yet to receive any maligning over that practice, though the day may come. :)

>
> Some folks are really busy and don't always have the time
>(I'm busy, but I usually try to write up the QSL right after I
>get off the air).

Wish I'd thought of that! I just spent the last week filling out requests I've received from the buro, plus all of my outgoing requests. This involves my unconfirmed DXCC countries, new countries for me on 40 and 80 meters, new states for my 5-band Worked All States effort, and new grid squares on 6 meters. Total output: 500+ QSL's.

I need a computer to do all this stuff...my arm is tired!
>
> And last, the cost. With a new postal increase hanging
>over all our heads, the costs are getting high.

this is a personal issue, especially with personal outgoing requests. I want my new countries on 40 and 80 meters in hand as soon as possible, so I'm sending out all my requests DIRECT. Once you figure in return postage, I figure I've got about $100 worth of direct cards going out. Buro would be cheaper, but it can take YEARS in some caes.

>
> I myself QSL 100%. If I get a card, the other person
>always gets one back.
>

An honorable practice that is slipping by the wayside.

> While we are on the QSL subject, has anyone given
>thought to the idea of a DOMESTIC QSL service? Some league
>officials had suggested the idea, and I was wondering what

>everyone thought of it.
>

The folks who chase counties on 14.335 have already established their own
buro.

> In closing, I think QSLing is one of the traditions
>than no one can really argue with. You could sit here and
>argue about CW and AM untill you are blue in the face, but

To my knowledge, the HTX-202 does have true FM rather than phase
modulation. That's what the guy who posts about once every two weeks
about how great the HTX-202 says. Me, I've got one for me and one for
the XYL, but I don't run packet. As far as the receiver goes, the HTX-202
is about as clean a 2M FM rig as I've heard, if that means anything on
packet.

: Gary

There are so many problems with that proposal that I hardly know where
to begin. Trying to be brief:

The current incentive licensing structure may need some adjustment,
but its intended purpose is based upon sound reasoning. In exchange
for a demonstrated increase in ones technical knowledge and operating
skills, you get more priveleges. This is a fairly logical way to
promote "self-training" in the Amateur Service. Without it, I suspect
the average amateur, given full priveleges, would be inclined to close
the books, settle into his favorite niche, and that would be that.
The fact that the current testing scheme is probably inefficient at
assuring real improvement in skills and knowledge is another question
altogether.

How would a one-class Amateur Service work? Is there a test at all?
If so, would it be equivalent to the Novice or Tech? If so, do you
really want to give that level of demonstrated knowledge full
priveleges? If you make the test difficult enough to assure that the
person is fully capable of dealing with full privs, then how is the
newcomer, with no electronics background or experience, ever going to
get into ham radio?

In an ideal world, you might suggest, a "real amateur" would want to
learn new things and advance on his own. Some would, and some do.
But be honest...the _average_ ham needs some incentives.

Upgrading for most has nothing whatever to do with "confirming our
self worth" as you assert. It is a simple matter of gaining increased
priveleges. That's the way the system was intended to work. In this
day of push-button-everything, what is wrong with asking someone to
demonstrate increased knowledge in exchange for increased priveleges?

A lot of people have said if we change "this" or "that" about ham radio, it will become just like citizens band...maybe yes, maybe no. But if you remove the incentive system from amateur radio, you're going to create a huge population of very content "mike-potatoes". I don't know if that's citizens band, but it sure isn't (or shouldn't be) ham radio.

Hmmm...I would have to say that here in the Greater Washington D.C. area,
the most requested/played song of the year was The Funeral March.

The problem with the examinations today is that they don't test for
a demonstrated increase in ones technical knowledge. They simply test
to make sure you are able to memorize the question pool.

>Without it, I suspect
>the average amateur, given full priveleges, would be inclined to close
>the books, settle into his favorite niche, and that would be that.

Are you implying that this doesn't happen today already? I can't count the
number of "amateurs" I know that are either single-mode operators, or have
no interest in learning about other modes.

YS>I would be happy to help this person, but I would expect that he
writes at least a brief memo explaining what he would like me to do
as a matter of courtesy. Am I expecting too much from him as
courtesy?

It's not new... I've seen this happen before...10-15 years ago...

Often it occurs because international postage FROM other countries is so
high that it can bankrupt operators who desire to send QSLs.

I must agree that it curely would have been a nice (at least) gesture
for the QSL manager to have included a note requesting your assistance
in forwarding his QSLs. Unfortunately, we see all too little courtesy
among our ranks these days... and it doesn't appear to be getting much
better. There may have been a language barrier, but, if the manager
REALLY wanted to send a note, I'm pretty sure he could have found
someone to assist in the preparation of a 'master' text which he could
have copied (either manually or mechanically) for sending to those whom
he expected to perform the gratis forwarding.

Hope you got my other message... the DISKETTE with BEAM HEADING software
is on its was as of 01-02-95.

32. HP 9000/710 Morse Tutor Software (Unix)

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-01 19:57:50 UTC
From: Quentin Campbell <Q.G.Campbell@ncl.ac.uk>
Message-ID: <3e71fu$rg7@whitbeck.ncl.ac.uk>
Source record: 254031

I am interested in writing a morse tutor for HP 9000/7xx machines running HP-UX 9.0x. This program is unusual in that its aim is to develop a fast touch-typing response to morse characters received by the human operator. The only real difficulty with this tutor software is getting the 9000/7xx system to generate the necessary audio output.

(A question: The Royal Navy trained its Wireless Telegraphists to record received morse on typewriters. There were a number of operational reasons for this but among them was that it facilitated good accuracy at high speeds. Did the US Navy train its operators in the same way?)

The 7xx series systems have a sounder on their HIL board which has a neat subroutine interface requiring a single call to generate a tone of specified pitch and duration. However, try as I have, I cannot get it to generate a series of tones from a C-program.

I have made some further enquiries about this but without success. The various e-mail lists to which I appealed that deal with HP-UX and related topics have not turned up a copy of the "HIL Technical Reference Manual" and the respondents also seem to be unanimous in saying forget the HIL sounder and instead use the Audio Interface (APPI). However this is a very clumsy interface for my purposes.

Has anyone out there any experience of software of this type on HP-UX systems? I would be grateful for any C-source code examples that uses the APPI and timer routines to generate from within the program the data file needed to output a series of short duration simple tone through this interface.

(BTW: I have obtained a copy of the morse tutor for Apollo systems from one of the Amateur Radio archives but this does not really help.)

I can be e-mailed as Q.G.Campbell@ncl.ac.uk if you wish to send responses directly.

Thanks in advance

Quentin Campbell (G4OEU)

You're right Zack...What I meant to suggest was to be aware, as you mention that the XX85 MMICs have the paint dot to indicate the input lead while the XX04 case MMICs have the bump to indicate the output lead...This has confused me in the past until I finally got it all straightened out. The intent was to express the necessity of paying attention to the polarity of the device.

I've been told that the MiniCircuits MMIC's are actually made by Avantek..(and so they *should* be the same)...can you confirm this ?

I would like to suggest to all amateurs, but especially those in the US, that when you want to have a QSL returned, that you enclose either an IRC or "green stamp" or the proper postage stamp for the country of the amateur who will be returning a card to you.

It is most upsetting to receive an SASE from a US amateur with the correct postage from the US to Canada, but in AMERICAN stamps! Unfortunately, NAFTA not withstanding, Canada Post will only accept Canadian postage.

I'll put my sopabox away for now, but watch this space! 73 & Happy New Year!

Phil

I remember seeing an article (about a year ago?), in
PC Computing magazine, in which they tested quite a few
electronic devices in an aircraft. They had spectrum
analyzers and such in a shielded hanger. They took
measurements at several different places, including the NAV
receiver antenna... Several portible (Walkman style) receivers
put out a very large amount of RF, very close (if not in)
to the NAV frequency band. Most of the computers were
very RF quiet.... (I think Class B cert. helps)

True. But it is better than nothing. We _should_ make it better, of
course.

No, I'm certainly not suggesting it doesn't happen now. That's why it
needs "adjustment". My comments were in response to the suggestion
that we eliminate the incentive system altogether, and have a single
class of amateur license with full priveleges. As I said, the
problems with current testing are a separate problem.

From: drranu@lamar.ColoState.EDU
Message-ID: <3e7ac7$23ck@yuma.ACNS.ColoState.EDU>
Source record: 254036

My keypad on my 580 has been worn down now so that one cannot read the characters that were once printed on them (goes to show you how much I use it!). I am interested in getting a replacement keypad (the opaque white face on the front), if you happen to have a mutilated 580 with no need for the keypad please let me know, maybe we can work something out. Or if you have any information about where to get one please mail me or post here.

Damn fine radio...
Thanks for your time!

SB DX @ ALLBBS $OPDX.188
Ohio/Penn DX Bulletin No. 188

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 188
BID: $OPDX.188
January 2, 1994
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, AD1C, K4CEF & Southeastern Cluster Group, WA8JOC, NW8F, WB9YXY, KP4BJD, KP4ECL, NCDXF, 3A2LZ, DF4RD, G3NUG, G4DYO, Japan DX News and JE1DXC for the following DX information.

1P0, SEBORGA. In a fax received by Daniel, 3A2LZ, he states he has received operating permission for 1995. So look for him as IK/3A2LZ/1P0D usually on weekends operating CW, RTTY (until the laptop's battery runs out) and for some activity on the WARC bands. Daniel also mentioned if there are any RS-12 passes while he is in Seborga he will work them too.

1S, SPRATLY ISLANDS. Robin, DU9RG, has announced that plans are being made for an operation around April 10-16th. The callsign that will be used is DU0K. No other information was made available (such as bands, number of operators, QSL route, etc.). Just a reminder that Spratly is claimed by several countries.

8Q, MALDIVE ISLANDS. Carlo, I4ALU, is supposed to be active from here until January 6th, but there have been no QSNs reported as of yet on the Ohio/Penn Network. His activity is to be on all bands CW only, check 10 kHz up from band edge. QSL via I4ALU.

A22, BOTSWANA. Dave, A22MN, will be leaving A2-land in February. He will move on to Finland where he will be there for the next 3-4 years. Meanwhile, Dave has been trying to work stations on 80/160 meters. He is reportedly upset because the same individuals keep calling him on these bands and they are not giving other stations who would like to have a chance to work him as an new one. Also, PLEASE send QSL cards only to his QSL Manager WA8JOC (and not direct to Dave). Dave's future plans while in Finland are to operate from OH0, OJ0 and M-V Island.

IOTA NEWS (H44 and P29). In the second part of January, Norbert/DJ9RB and Bernhard/DL2GAC (H44MS) will be active on CW, SSB and PACTOR with an emphasis on the low bands from Shortland Island (IOTA OC-162)

located in the Western Solomons. After this operation, Bernhard says he will try and activate on his own at Sikaiana Island (the only remaining unnumbered group in the Solomons). Another possibility for March is an island in the Woodlark Group in P29. This is another unnumbered group from Papua New Guinea.

OD, LEBANON. Timo, OH1NOA, will be active as OH1NOA/OD5 until August of 1995. Activity will be on 80-10 meters including the WARC bands (he prefers CW). QSL via OH1MRR.

PACIFIC DXPEDITIONS.
Masa, JE1DXC, who has finally worked out his flight reservation problems, will be active from three different IOTA locations in the Pacific. All activities will be on 80-10 meters with CW, RTTY and SSB while operating barefoot in small antennas. Look for him January 19-20 as 3D2XC (IOTA OC-016), January 21-26 as T30XC (IOTA OC-017), January 27 through February 2 as T20XC (IOTA 0C-015) and February 3-5 he will be active again as 3D2XC. QSL via JE1DXC.

Yoshihiro, JF6BCC, will be active from Saipan (KH0), Belau (KC6) and possibly Guam (KH2) begining in late January. Look for KH0/KH2GR on January 27-29th, KC6IY on January 29-February 1st and possibly KH2GR on February 2nd. QSL via JF6BCC.

QSL INFO (from KF7E). Jim, KF7E, QSL Manager for 5X1HR (94 CQWW SSB), indicated the QSL cards are back from the printer and the first batch of cards went into the mail December 15th (All cards were direct, no bureau cards yet received). He also mentioned that he was one of the participating stations in the Apollo 11 25th Anniversary Special Event operation this past summer and has received 800+ SASEs. On December 20th, he received from NASA the master certificate (some 5 months after the event). He regrets this delay; it was beyond his control. Jim reports the certificate is beautiful, but it will cost about a buck to print and he will be stuck with the additional postage after January 1st. Though the delay and costs are beyond his wildest expectations, he will see to it that all SASEs on hand will be answered. Your PATIENCE is appreciated.

VP8, SOUTH SHETLAND ISLANDS. Andy, SP2GOW, is one of the operators now active from Smith Island in the South Shetland group as VP8CQS. Activity has been mainly on 40 and 80 meter CW, between 2330 and 0300z. QSL via DL1EHH.

XX9, MACAO. Noda-san, JE7RJZ, will active as XX9TJZ, January 9-13th. Reports indicate he will be active on AO-10 and AO-13. QSL via JA7FWR.

ZC6, PALESTINE (?). The station signing ZC6B (operator Sami) continues to be active most days on 14243 kHz at 1400z (with OE6EEG). Sami, who claims to be operating from Gaza, stated that he will be installing a 3 element beam soon. He has also stated that he has not received any mail yet from either the USA or EU, because it takes 1 month or more to receive them. Sami has mailed some QSL cards direct by using the

callbook. According to Sami, USA cards can now be sent to: Dr. Sami Tarazi, c/o 7162 E. Kendall Drive, E. Syracuse, NY 13057. The original QSL route was: Dr. Sami Tarazi, Box 1008, Gaza, Palestine via Israel. There are other rumors floating around stating a couple of DXpeditions will take place in February and March by some JA, European and statside operators. Also, ZC6A is reported to be active soon.
Just a reminder! ZC6 was deleted from the DXCC Countries List as of July 1, 1968. Also, the allocation list of international call signs shows that the prefix for ZC6 is allocated to the United Kingdom of Great Britain and Northern Ireland. (From the ARRL DXCC Countries List, July 1994)

ZL8, KERMADEC ISLANDS. Bren, G4DYO, reports that Barry's, G4MFW/ZS1FJ, proposed DXpedition to Kermadec has been cancelled. Details were not given.

1995 JAPAN INTERNATIONAL DX CW "LOW BANDS" CONTEST takes place January 13th at 2200z through January 15th 2200z. The bands to be used 160/80/40 meters. The mode is CW. Entries can be SO/MB, SO/SB, MO/STX and SO/MB QRP. Contest exchange: JA stations (RST+JARL Prefecture Number) - DX stations (RST+CQ Zone Number). For more details contact "Five Nine Magazine": P.O. Box 59, Kasata, Tokyo 144, Japan.

AMATEUR RADIO CONVENTION IN IRAQ. From the Northern California DX Foundation newsletter, Adel M. Aswad, YI1FC, reports:" We want to inform you that we are planning to hold a world-wide radio amateurs convention in Iraq around March 1995 and we want to invite all active radio amateurs around the world..." For more information, write: Adel M. Aswad, P.O. Box 7441, Baghdad, Iraq.

KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following packet and online addresses listed below.

When I work a DX station and want a QSL direct, I always send the proper collection of IRC's. Believe it or not, though, my p.o. doesn't carry IRC's and I had to drive to the main branch in Media (about 15 miles from home and about 5 miles from school) to get them. When I went into another branch besides mine nearby, the clerk had never even HEARD of an IRC!

It's so hard to find good help these days......

Yah, but you know what I mean, right, Dave? .com is a standard for
TCP/IP, and only a computer has to know what you're talking about. But
a lot of folks hear the word ham, realize they have heard it before, but
still don't know what all it encompases - because the name is not
self-explanatory. I agree with most that we should be getting
away from calling ourselves hams and instead call ourselves Amateur
Radio operators. That's primarily because I want people to know why I am
standing in a Red Cross shelter with a radio in my hand, but I think it
is good for the other aspects of our hobby, too.

JJ>always great and there is almost always a QSO to be had! 73!

JJ>Jeff

Yah, but how do I list that in my log book? ;-)

The FCC has their list of emissions used in the Amateur Service and IRC
ain't one of them. Ha! I guess you could call it DATA 'cause it's
telecommand and computer communications. As a fallback we could list it
as TEST - emissions containing no information.

Wait, that's *ALL* my emissions!!

See ya there some night! Greg Pool WH6DT

I just got my license and before I got it I called the FCC and they gave
me my call sign and said I could start using it immediately and the form
would be in the mail soon.

> Thank you very much. sjhawk2@srv.pacbell.com
> 73 49 0100 1001 de Steve WV6U

Steve ....

EA9IE is a very active and well known DX'er / contester from
Cueta/Melilla. He is also known as a consistent and reliable
QSLer .... if you follow standard DX QSLing practice and
provide assistance in return postage ... ie "green stamps",
IRC's, or Spanish stamps ..... with your request

(And please don't reply with anger over the above statement.
A little reflection on the volume of requests that someone
like EA9IE receives as a "semi-rare" native DX station,
and I am sure that you will agree that helping out with the
cost of postage is only common courtesy on the part of the
garden variety US requestee ..... NOT an indication of greed
on the part of the DX station)

I would also assume that the stateside QSL manager info you
received was based upon a special or contest operation of EA9IE
by the state side ham ..... which is not unusual for a strong
station in a unique location like this one.

It has been several years since I have had an occasion to ask
for a QSL from EA9IE .... but rest assured that he was very
helpful on all five bands for my 5BDXCC ..... the following
address info is from an an old International call book .....
but the entry is highlighted and given several lines of white
space ..... so I would believe that it is still valid:

EA9IE
Juan J. Rosales Fernandez
P. O. Box 410
11080 Cueta Spain

Hope the above helps .... 73 es gud dx de kf5dx bob

50. Reduceing local interferance

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-02 04:47:12 UTC
From: shansen@cello.gina.calstate.edu
Message-ID: <3e80gg$759@cello.gina.calstate.edu>
Source record: 254047

I found a way to reduce interferance from an amateur transciever to a CRT. All you have to do is put a piece of aluminum foil in the way of the signals from the transciever to the sides of the screen. the front does not really matter. It seems to work gre at. I found this correction, because my sister was complaining about interferance to the monitor of the computer she was on when I was doing packet on the other one. Another great way to reduce interferance is to move the antenna away from the screen. I f ound that on an HT, moving it a foot or two reduces interferance dramatically. Just though you might want to know. This seems it might work good for front end overload on TVs too.

support Packet TNC, control ICOM, logging etc etc.
> Thanks.
I have not tried all the logging software out there but I do use TOTAL HAM. It
is sold by REMWARE, PO Box 1566, Manassas, VA 22110. Write and ask for a demo.
They provide a demo with slightly limited capabilities so you can try it out.
Supports PACKET CLUSTER spots, ICOM, Kenwood, Ten-Tec, Yaesu radios, etc.

With certain exceptions, notably Field Day. When I was back in West Virginia, and working Field Day for the Mountaineer Amateur Radio Association(W8SP), it was amazing how often one could break a pileup by using the phonetics "Whiskey Eight Super Pickle".

My current favorite is TImes Microwave LM400- a little lower loss at 1.2GHz
than 9913, uses the same connectors. Solid dielectric, so you can't use it
for a garden hose. The center conductor is copper clad aluminum, so it is
much more flexible than 9913- a real bonus.

Yes, that's true, but to run 9600 you still have to go inside and
modify the rig to get direct varactor modulation and direct discrminator
output. Most folks are a bit shy about doing that to the tiny innards
of a HT. You can't just use the mike and earphone connections for 9600,
but they'll do fine for 1200 baud.

Abs: Q.G.Campbell@ncl.ac.uk (Quentin Campbell)
Date: 01/01/95 19:57

I am interested in writing a morse tutor for HP 9000/7xx machines running HP-UX 9.0x. This program is unusual in that its aim is to develop a fast touch-typing response to morse characters received by the human operator. The only real difficulty with this tutor software is getting the 9000/7xx system to generate the necessary audio output.

(A question: The Royal Navy trained its Wireless Telegraphists to record received morse on typewriters. There were a number of operational reasons for this but among them was that it facilitated good accuracy at high speeds. Did the US Navy train its operators in the same way?)

The 7xx series systems have a sounder on their HIL board which has a neat subroutine interface requiring a single call to generate a tone of specified pitch and duration. However, try as I have, I cannot get it to generate a series of tones from a C-program.

I have made some further enquiries about this but without success. The various e-mail lists to which I appealed that deal with HP-UX and related topics have not turned up a copy of the "HIL Technical Reference Manual" and the respondents also seem to be unanimous in saying forget the HIL sounder and instead use the Audio Interface (APPI). However this is a very clumsy interface for my purposes.

Has anyone out there any experience of software of this type on HP-UX systems? I would be grateful for any C-source code examples that uses the APPI and timer routines to generate from within the program the data file needed to output a series of short duration simple tone through this interface.

(BTW: I have obtained a copy of the morse tutor for Apollo systems from one of the Amateur Radio archives but this does not really help.)

I can be e-mailed as Q.G.Campbell@ncl.ac.uk if you wish to send responses directly.

Thanks in advance

Quentin Campbell (G4OEU)

The current exam structure is *not* a "fairly logical way to promote
self-training in the Amateur Service." That, and the fact that the
exam structure has little or no rationality in coupling skill testing
with associated priviledges, make it less than worthless. It's actually
an impediment to encougaging amateurs to continue to learn and update
their skills throughout their amateur career. And indeed, many (most?)
amateurs settle into a niche once the tests are out of the way, and
forgotten. Passing the tests should not be an end to learning, but
rather a beginning. The way the tests are structured invites amateurs
to stop learning once they have that Extra. The exam structure also
places a disproportionate emphasis on manual Morse and slivers of
HF as the end all and be all of amateur achievment.

>How would a one-class Amateur Service work? Is there a test at all?

>really want to give that level of demonstrated knowledge full

>priveleges? If you make the test difficult enough to assure that the
>person is fully capable of dealing with full privs, then how is the
>newcomer, with no electronics background or experience, ever going to
>get into ham radio?

Ok, lets examine what an applicant should know in order to operate
an amateur station. The most basic thing is to know the rules of the
road. *All* amateurs need a working knowledge of Part 97. That's
basic. There's no reason to allow Novices or Techs to operate with
less knowledge of the regulations than what's needed for an Extra
exam. If we are eliminating class distinctions, the class band and
power limits will no longer exist, so everyone needs the same knowledge.
I'd recomend that the exam have a regulatory element of 50 questions,
open book, with every applicant required to bring a current copy of
Part 97 to the exam. This has several benefits. First it demonstrates
that the applicant knows how to access and interpret the rules for
a variety of situations, and second it assures that each new amateur
has a current copy of Part 97 available. Since rules change, and
memory is often faulty, requiring the applicant to have the skill
to look up and interpret regulations to fit situations gives the
successful applicant a useful lifetime skill.

As important as knowing the rules of the road, is knowing how to
operate an amateur station safely. The second element of the
proposed exam would be a 50 question element on electrical and RF
safety. This would also be open book with a current copy of the
National Electrical Code, and any and all relevant ANSI documents
allowed. Stressed on this exam element would be basic station wiring,
basic antenna wiring and structural issues, and basic RF biohazard
issues. The successful applicant should gain a fundamental grasp
of issues of safety, and where to find detailed information to
answer questions about particular situations that may arise in
his amateur career.

An amateur must know how to avoid causing interference to other
services, particularly critical life safety services. Thus the
third element of the exam will deal with RFI, electromagnetic
compatibility, and spectral purity issues. For most applicants,
this will be the most difficult exam element. There will be
100 questions, again open book, dealing with recognizing, measuring,
and solving problems of electromagnetic incompatibility in conjunction
with amateur equipment and operatons. There will be an approved
list of reference texts that can be used for the exam. The successful
applicant will gain a working knowledge of testing, measuring, filtering,
shielding, and circuit design to prevent unwanted emissions.

There will be no time limit for these elements, the applicant can
employ any electronic calculating tools she may desire to use,
and a passing score of 70% will be required on each element.
The exam questions should be formulated so that anyone of average
reading and comprehension skills, given access to the appropriate

references, should be able to pass the element. No particular memorization skills or motor skills or prerequisite electronic training should be required.

Now *that's* what I'd consider an appropriate exam for an amateur license. It demonstrates that the successful applicant has the necessary skills to carry out a lifetime of self training in the radio arts.

>A lot of people have said if we change "this" or "that" about ham
>radio, it will become just like citizens band...maybe yes, maybe no.
>But if you remove the incentive system from amateur radio, you're
>going to create a huge population of very content "mike-potatoes". I
>don't know if that's citizens band, but it sure isn't (or shouldn't
>be) ham radio.

Frankly, I don't see any real difference between current amateurs suffering under the flawed "Incentive" Licensing scheme and amateurs of pre-68 who didn't have such artificial distinctions drawn. Either a person is qualified to operate an amateur radio station, or they aren't. The current examination system does little or nothing to prepare an amateur for the lifetime of self training they are supposed to pursue. At least with the scheme I propose, successful applicants will have the tools necessary to continue to self train if they wish. With the current system, there is only an emphasis on memorization and rote manual skills. That's poor preparation for a lifetime of amateur radio activity.

Interesting. This now begs the question whether some or ALL of the information is copyrighted. I still find it hard to believe that the IOTA designators themselves are copyrighted (that would be like copyrighting ARRL prefixes, etc). The island's names are (obviously) public information. This being the case, I don't see any problem with anyone producing a list of IOTA designators and their islands and maining this information available - particularly if there is no commercial gain involved.

Sure, if one were to photocopy the book or quote it verbatim, then I could understand there being an problem. I also understand the situation concerning eligibility for the IOTA awards.

Gary,
You criticize the current incentive licensing system because the tests encourage memorization rather than learning. Fine. I also acknowledged that. You also criticize the idea of multiple classes because "once a person passes the Extra, he has no incentive to continue learning", and yet you propose a single exam which would give full priveleges to all amateurs. There is no consistant logic here.

You have some good points regarding test content, and few would argue that the testing scheme should be revised to encourage real learning of material vital to the proper operation of a station. But you have not convinced me that a single-class-non-incentive licensing structure would even come close to working.

You acknowledge that it is difficult to motivate the "average" amateur to advance his knowledge (that the current scheme...several testing levels, can not do it). Why should you believe that _one_ test would do any better?

Greetings!

In a week, I will have the fortune to travel to Colorado for a ski vacation. I will of course be taking my HT, and am looking for someone to advise me on the most active/greatest coverage 2M repeaters in the area west of Denver. I'll be skiing in the Copper Mtn, Breckenridge, and Arapahoe basin area, so I'm interested in whatever covers that neighborhood. I do have the ARRL repeater directory, but the listing is quite extensive, and only tells of the existence of a repeater, and not it's likelyhood of being monitored for a ragchew or emergency assistance- the kind of info I'm searching for.

Many thanks in advance for your advice, and hope to meet ya on the air.

Date: 1995-01-02 20:15:03 UTC
From: Jrouse@ix.netcom.com
Message-ID: <3e9ms7$27f@ixnews2.ix.netcom.com>
Source record: 254072

I note a myriad of messages dealing with QSLS and how to get them without a lot of woe. As a QSL manager for several DX stations, let me offer a few pointers to the new DXers: Please always send a self-addressed-stamped-envelope (with 32 cents in postage in the USA). Don't send a mailing label and a stamp, otherwise the QSL manager has to supply the envelope and that's not fair. ALWAYS USE GMT on the QSL and make sure the date and time are correct. In many cases, a manager can get the right data from the computer. BUT not all managers use a computer and it's a real hassle to take time to go searching for the correct date and time......And PLEASE make sure you have the correct manager for the DX station. If you haven't received a QSL from a manger in quite some time, perhaps you neglected to send an SASE. In my case, I send those cards to the bureau. Make sure you have SASEs filed with your area QSL bureau. You may be in for a surprise!
Thanks, all, and Happy New Year!

I got into the thread a little late, but what is sounds like you're doing is proving the wrong medicine for what you're trying to cure. It appears that what you really need to target is improving the current licensing procedures that are currently in place.

In all honesty, if you are serious about your proposal, it will never fly with the FCC. If you want more supporters, then try moving your angle of attack just a bit.

WB0RTK's arguements are right in step of what needs to take place. I feel that a total-revamp of the exam proceedures is probably not the best thing to do.

Just my $.02.

74. N8FOW on line conference

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-02 21:26:32 UTC
From: Rick Lehman <rlehman@gate.net>
Message-ID: <3e9r28$t99@tequesta.gate.net>
Source record: 254073

I am having trouble using the N8FOW on line conference. For those not familiar with this, it is very much like IRC(Chat mode). I access this on line conference by way of the WWW at URL-

http://www.calpoly.edu/~dmalone/w6bhz/

Once at this home page, I use the hypertext link labled <other stuff useful to amateur radio>. There I find the hypertext link labled <N8FOW conference....> Following this link results in a telnet connection to <wsu.n8fow.ampr.org:3600/>.

My problem is that upon entering the conference all apparent tabbing is lost and I end up with a display which is very difficult to read because of run-on text. The telnet program I am using has an executable called telw.exe and I believe results in VT100 terminal emulation. I have tried changing the emulation mode by way of the /charset command available in the conference and nothing helps although VT100 does not appear to be available. I have tried changing the display width but again no luck. I have tried other telnet programs and again no luck. I have tried accessing the connection by way of my unix shell account and cannot make connection.

Does anyone have experience with this conference or have any ideas?

Thanks for any reply.

Rick

RC>I have been wondering for some time why the HF DX crowd hasn't started
RC>chasing Grids. Serious DXers "ran out of countries" years ago (except
RC>for the few created from the USSR, and artificially manufactured ones).
RC>They'll run out of IOTA eventually; then what? GRIDS.

So Bob, how do we get started? I think it would be a lot of fun.
You could collect grid squares for specialized modes like QRP CW,
10 meters, 30 meters etc.

First step for me would be to try to figure out what MY square #
is!!

 SLMR 2.1a Who'd a' thunk it!

78. Second Biannual Elmers Directory Mass-Ack

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-02 22:33:39 UTC
From: pschleck@gonix.com
Message-ID: <pschleck.789086019@gonix>
Source record: 253930
Cross-posted to: rec.radio.amateur.misc,misc.test

Today, I mailed the following to all Elmers listed in my Amateur Radio
Elmers Resource Directory at their last known E-mail addresses:

>Greetings fellow Usenet Elmer,
>
>Hard to believe, but the Amateur Radio Elmers Resource Directory will
>be four years old this March. While the list's size and diversity
>that has developed during this period is commendable, it also brings
>with it the increased chance of inaccurate and out-of-date
>information. Therefore, I'm undertaking the second biannual
>reconfirmation/purge of the Elmers list. I will also be undertaking a
>recruiting drive for new Elmers (more on that in a future
>announcement). Long-time Elmers will recall when I went through these
>gyrations in late 1992. Hopefully things will be as smooth as last
>time and I will only lose a handful of Elmers, and those that stay
>will have only a small number of updates (because they've provided
>updates to me all along, right? :-).
>
>I've enclosed the latest copy of the Directory in an accompanying
>message (Just in case your system doesn't like large E-mail, at least
>you will see this message. If you don't get the full list, E-mail to
>elmers-request@gonix.com will send you information as to how to obtain
>a copy). Please take the time to review your entry, confirm that it
>is correct, and make updates if necessary. Please also check the
>index to make sure I've listed you under the right topics. I've
>enclosed the full list so that you can be aware of other entries,
>particularly on the same or related topics, and adjust your entry
>accordingly.
>
>Apologies if you have recently joined or sent updates, but I really
>feel the need to solicit an across-the-board "QSL" to insure that
>everything is correct and up to date. I promise I won't bother you
>again for another 2 years (which, if all goes well, should be in early
>1997 :-).
>
>I will also be posting a notice to the rec.radio.amateur.misc
>newsgroup on January 1st (and a second notice on February 1st) to
>compensate for bounced E-mail (and vacations, time away from the net,
>end-of-semester/ tax-year/bowl-game distractions, etc., etc.).
>
>If I don't hear from you by March 1st, I will assume that your entry is
>obsolete and will delete it. I will, of course, be more than happy to
>reinstate it at any time upon receipt of updated information.

>
>I'd like to collectively thank all the Elmers for their volunteerism and
>enthusiasm in support of this project. The net appreciates your
>efforts.
>
>73, Paul W. Schleck, KD3FU
>
>elmers-request@gonix.com
>
>Maintainer, Amateur Radio Elmers Resource Directory

I'm posting this message in case my E-mail didn't reach everyone for
some reason or another (certainly not due to outdated E-mail
addresses, as everyone kept me updated, right? :-).

Remember, if I don't hear a positive confirmation from you by March
1st, I will assume your entry is inactive and I will delete it.
Apologies to the rest of the net for this closed-circuit. As I noted
above, I promise I won't bother the net again for another 2 years :-).

83. Do NTSC TVs work on 50 Hz power?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-03 00:48:05 UTC
From: price@cod.NOsc.MIL
Message-ID: <9501030048.AA24439@cod.nosc.mil>
Source record: 253941

First, Happy New Year to y'all!

Apologies for this posting not being specifically ham radio
related, but perhaps some of you can help.

My wife and I will be moving to London, England in a few months,
it looks like, for a temporary work assignment. I'm starting to
compile a lengthy "to do" list, and also a "questions" list.

Note: I *know* that NTSC TVs won't receive PAL signals, so please
don't answer that question.

My question to you all is: If I take a standard NTSC TV and VCR
to England, and use a wall transformer so that the power to the TV
and VCR is 120 v, 50 Hz, will either the TV or VCR work properly?
E.g. could I play NTSC video tapes, or even watch the output of my
NTSC camcorder?

The reason I suspect there would be a problem is that I've always
assumed that TVs (at least older ones) use the line voltage
frequency to derive the field/frame rate (60 Hz in the case of
NTSC). Similarly I've assumed that VCR motors expect a 60 Hz
power source to operate properly.

Related question: are there newer TVs and/or VCRs that are
completely digital so that these questions are not an issue? Are
there TVs that will switch between NTSC and PAL?

Inquiring minds want to know, by direct replies, please. Tnx,
73--Jim, K6ZH, price@nosc.mil

You can operate any mode over 50 mhz but puting a key in a mic jack
doesn't count as CW because you are using FM as your signal instead of a
CW signal. What you would be performing is MCW.

87. RS-15 experiences yet?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-03 01:21:48 UTC
From: price@cod.NOsc.MIL
Message-ID: <9501030121.AA24711@cod.nosc.mil>
Source record: 253944

I see on the local DX PacketCluster that RS-15 has been launched, the up and down links and the Keps have been posted, etc. Anyone made a contact yet? With the higher altitude orbit, longer distance QSOs should be possible than with RS-10 or RS-12. But it may take a bit more power to hit it--or maybe it has a much better Rcvr?

In order to "calibrate" my sat. tracking program on this bird, could someone give me a few correct orbit times, especially those covering Western U.S.? Tnx, 73--Jim, K6ZH, price@nosc.mil

88. Re: Alinco DJ-580 keypad? ...

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-03 01:24:17 UTC
From: jgates@pnw.net
Message-ID: <3ea901$qua@cascade.pnw.net>
Source record: 253940

Alinco is advertising a new HT (forgot the model number) that looks like the 580 family - looks like the rubber membrane keypad is the same. And they claim the keypad problem is non-extant on the new radio. Get in touch w them and see if you can buy one and put it in the 580.

Radio is called th DJ 582; "improvements include 2x scan rate, separate low power PTT switch, and a highly durable keypad"

What else could you ask for !

Tim ....

Without any equivocation .... I can reccomend that you run ... not walk .... to your nearest HAM store or mail order house (eg Ham Radio Bookstore tel: 603-878-1441) and buy a copy of "The Complete DX'er" by Bob Locher, W9KNI.

This is (IMHO) the best and most entertaining book on the joys and how-to's of DXing that has ever been published.

The book is series of narratives or vignettes by Bob illustrating various aspects of DXing that are not only informative but just plain fun to read.

He covers how to search for DX (the art of LISTENING is paramount), how to QSL with the best chance of success, what equipment to buy and how to use it, etc etc.

But the most important part of this book is that Bob is an excellent writer ... and an excellent DXer (top of the cw honor roll). His tales of contacts with a south pacific island school teacher using solar panels to a qrp rig, how he researched and taught himself enuff french to be able snare a first contact with a reluctant Reunion Island ham, and his blow by blow descriptions of how to survive and be successful in pile-ups are absoloutley facinating. They will inspire you to fire up the rig an enjoy this wonderful aspect of amateur radio.

(no .... I have no affiliation with w9kni, Bencher, or Ham Radio Bookstore)

If he's got an all-mode VHF rig, then it very well could be CW (A1A or
A1B).

If you're going to be such a stickler, then you'd better watch out for your
units. 50 mhz is VLF. 50 MHz is VHF.

The original poster's question asked if he could operate CW without
passing a test...the answer was "yes". However, without stipulating
the frequency he had in mind, he also used the example of feeding the
audio output of a code practice oscillator into a mike for
on-the-air-practice. That's what people have been trying to clarify
with their answers. If he intends to use that method on any
frequency restricted to A1A mode, he would be in violation.
That's not being a stickler, that's trying to be accurate and helpful.

They were being crossposted originally from rec.radio.info; but since I
received a number of complaints, I kept them to the rec.radio.info
newsgroup.

However, this point is moot, since the service has gone to a paying
subscription only service as of 1/1/95 and there will no longer be any
posts from them.

Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.swap,rec.radio.shortwave

Hello All,

I have for sale an Icom 24at dualband handheld. I am selling this radio to upgrade to a more expensive handheld.

Included with the radio, I will include the charger and the original papers and box (if I can still find them). I will also include the original stock rubber duck antenna, however, you will want to go and purchase another one right away. The stock antennas aren't very good. Also, I will include two battery packs. The first is the stock battery which is 7.2V @ 700mAH. The second is 7.2V @ 1000mAH.

Again, if I can find them, I will also include the factory diodes necessary to modify the radio's extended transmit and receive capabilities along with the directions.

I am asking $270 for the package, and I will ship via UPS ground. If interested, please e-mail.

Anyone know of using the Sound Blaster or Sound Blaster Pro DSP card
as a RTTY send/receive interface? If so, direct email appreciated.

Thanks in advance. Happy New Year everyone.

best regards/bob K6KGS buaas@wireless.net

99. Problem with ICOM 2m/70cm Mobile Unit

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-03 06:01:19 UTC
From: dave@boi.hp.com
Message-ID: <D1tFE8.Kp6@boi.hp.com>
Source record: 253949

I've just purchased an ICOM IC-2700H DualBand
Transceiver, and am having some peculiar problems
with it. On 2m, an obnoxious hum is present,
and 70cm operation exhibits high levels of noise.
The clues are as follows:
- The problems exist while in one car (Nissan
Maxima), but not the other (Toyota 4Runner).
- Problems exist regardless of using either of
two cable/antenna systems.
- An Alinco DJ580 handheld does not exhibit
the problems running from the same power system
(the car battery) and driving the same antenna
systems.
- Problems exist whether the Maxima engine is on
or off.
- Problems exist when I remove the Maxima power
source as a variable by supplying 12V from a
car battery sitting in the passenger seat.
My power hookup is through a cigarette lighter connector,
connecting to the lighter recepacle.

Has anyone had similar problems with ICOM dual banders,
or have any suggestions as to what the problem cause
could be?

Thanks,

Dave

Hookups for mobile radios (be they CBs, amateur, commercial, police,
whatever) should NEVER be run from the cigarette lighter. I suggest you
run a nice 12AWG cable from the battery, to a quality 30A circuit
breaker, to the cabin through a grommeted firewall hole. Hook this up to
your radio, directly. Avoid anything but butt-connectors. For a ground,
you definitely want a 12AWG running from the ground to a ring connector.

```
|------| <----- #10 Tek screw or larger, silver finished
| |
--- ---
| |
-----------######### <-- Ring terminal for ground
| |
*--******--** <--- Star washer
| |
\ / I would drive this into a NON-CARPETTED area, into the
\| car's steel. This would be a good ground.
```

Most radio noise is either power, ground, or antenna based. I suggest
you try the power and ground routes, based on your experimentations.

Cheers!

>better of the types available.

Mike,

Get the Program supermorse, from a simtel mirror, I think. It is called
sm???.zip with ??? the version number. The manual tells you a lot on cw
and its learning. As to learning method, just *never* try to visualize
the code, and think fo dit's and dah's, not of dashes and dots.

cu on hf, Moritz DL5UH

>computer software and would like to know what you feel is the best or
>better of the types available.

Mike:

I learned CW using the computer program SuperMorse, which is available as shareware from most ham-related FTP sites. The best way to learn is to set up a definite schedule for study and stick to it. Set aside 30 minutes a day and work with the program. Try to learn a few new characters a day, and keep reviewing the old ones. Don't go longer than 30 minutes at one time or you'll start to feel fatigue...take lots of breaks. Enjoy the experience (it IS fun) and you'll progress rapidly. Once you start getting a good grasp on the characters, start sounding out things that you read in code. For example, when you're out driving and you come to a stop sign: spell it out in code. Start doing this with everything you come in contact with: signs, books, magazines, etc. It's great practice and it keeps you from limiting your study to your pre-set sessions. If you do this for 3-4 weeks you should be fairly comfortable at 5 WPM, though you might learn slower or faster depending on your own particular abilities and study habits. Also, be sure to use Farnsforth code...that is, keep your character speed at 18 WPM and use longer spacing to slow it down.

In addition, I would recommend buying a straight key and code-practice oscillator (or borrow one) and practice sending. Find someone else who is learning (or knows) morse code and send back and forth to each other. Tape yourself sending and play it back a few days later; that will give you good copying practice as well as point out any flaws in your sending. Most importantly, relax and enjoy the experience...I had a great time learning CW and I'm sure you will also.

All of the above is taken directly from my own experience: it is how I learned CW 2 years ago. Everyone is different, of course, so if the above method doesn't seem to work for you, be sure and experiment to find out what DOES work.

Good luck and 73's!

-Mike KB7QOP

103. Mods for Midland 73-005

Sorry, Bill. I am going to remain at the Convention through Saturday and Sunday to help staff the League booth. We normally do double duty by also representing ARRL HQ at the Convention. It is too late for this one, but I will give some serious thought to the possibility of doing more than one of these per weekend if there are "nearby" ARRL-sanctioned hamfests.

Maybe I'm crazy, but I thought I had once heard that the Alinco people were handing out replacement keypads at their booth at Dayton last year or the year before to people who specifically complained about this problem. Or it might have been another HT manufacturer with a similar problem, I dunno.

I would definitely call Alinco and complain to see if you can get a new keypad out of them.

Cheers,
Tom

Not sure, Victor, that this is entirely correct. Simply keying the PTT DOES count as CW since it will create an on-and-off, amplitude, keying of the RF carrier. FM will not be evident until a modulating signal is applied to the mic <audio> input.

Even with a (continuous) modulating signal applied to the mic input, and keying the PTT, the output still is not "modulated CW". I think, and may be incorrect, to qualify as "modulated CW", the carrier must be continuous

and the audio signal keyed.

Either way, it is permissible for a Technician operator (w/o code) to operate CW (using MCW or keyed carrier) on any frequency (above 50MHz) that is authorized to him/her. Only thing to observe is that the intended emission is authorized on that particular frequency.

Best of the New Year!!

>because "once a person passes the Extra, he has no incentive to
>continue learning", and yet you propose a single exam which would give
>full priveleges to all amateurs. There is no consistant logic here.

There's very consistent logic here. No small finite number of exams offers incentive for a lifetime of self training. One or five, it makes little difference. What my proposal represents is an *entrance* exam into the learning environment that is amateur radio. It makes sure you know enough, or know how to find out enough, to be legal, safe, and not cause harm to other services. Those are things *every* licensee needs to master before being allowed to emit RF.

Beyond that, the proposed test is structured to teach you the research skills you need to proceed with further learning *if you wish*. There's an old saw about leading a horse to water. That's true in amateur radio too. The proposed exam points you down the road toward a lifetime of learning via the open book format, which introduces you to the relevant references, but it can't force you to actually learn anything. My point about the Incentive Licensing scheme is that *it doesn't either*, and it doesn't even *try* to see you have the right kind of skills to pursue further learning.

The current system doesn't point you to anything down the road but more memorization and more rote manual skills. No real learning skills are needed to pass the entire suite of current exams. It doesn't require critical thinking or library research skills to pass even the current highest level exam, so it leaves you ill prepared to pursue a lifetime of self training. And besides that, the current system allows people to be licensed without even the rudimentary skills needed to determine if they are legal, safe, and causing no harm to other services. The current system doesn't even *emphasize* those latter matters. It's entire focus is disproportionately aimed at speed testing of a rote manual skill of negligible importance to modern communications in order to get small additional slivers of HF spectrum, also of little importance to modern communications. (The rote manual skill testing is redundant anyway since those wishing to use code will have to teach themselves code in any event, and those not wishing to use code won't, even if they are tested on it.)

ALIASNAME>>Im concerned about this myself. Im waiting till I get my tech license in the mail before i go on transmitting just to be safe . Why spoil a good thing over rumors.

What a way to start your Amateur Radio career! As of December 20, 1994, you do not have to actually hold your license - the mere issuance is sufficient for you to enjoy your privileges.

After your Application has been in the FCC's hands for about three weeks, call them on their toll-free 1-800 line, and ask if you've been issued a License. If so, you're "on the air!"

CITATION (not "rumor"):

>From ARRL Headquarters
Newington CT October 25, 1994
To all radio amateurs

SB QST ARL ARLB084
ARLB084 FCC licensing changes

The FCC today released a 7-page Order amending its amateur rules, effective December 20, 1994, to reflect what the Commission calls ''nonsubstantive procedural changes'':

1. To permit electronically filed data from VECs (paper applications also will still be accepted);

2. To authorize operation as soon as the new license data appears in the amateur service licensee data base, rather than (as now) when the license document has been delivered (details of how the new licensee can determine his call sign will be announced later);

3. To add a new rules section, ''Examinee Conduct,'' to emphasize that an examinee must comply with the instructions given by the administering VEs;

4. To treat ''Technician Plus'' as a license class;

5. And to provide for a ''renewal short form'' which the FCC says will be mailed to licensees in advance of their expiration date beginning sometime in 1995. The FCC added that renewal applications would be accepted no more than 90 days before the expiration date.

Because of the nature of these rule amendments, there is no notice or comment period required by federal law. Again, these changes do not take effect until December 20, 1994.

From: bcieslak@mkelan5.remnet.ab.com
Message-ID: <bcieslak.47.00102589@mkelan5.remnet.ab.com>
Source record: 253843

I've been trying to run jvfax and have been having pretty good luck with the exception that I can only see pictures in black and white....One fella on the air said I should run a VESA driver??? I have an older video 7 graphics card and paradise autocard .I've tried using the selections available with JVFAX for that card but still B&W. I was also told that there is a general VESA driver that I can use with any card. If so where could I get a copy? I want to exhaust all possibilities for my existing video card before I spring for a Hi Color card.

Thanks,
Brian AE9K

116. DX

From: TSTABLER@iunhaw1.iun.INdiana.EDU
Message-ID: <11B4F5B6C16@iunhaw1.iun.indiana.edu>
Source record: 253961

I have been off the air for years. When I left, I operated 80 meters as a technician and now that I am back, am an advanced. So now I operate a lot of 20 meters. My problem is that I am building up DX contacts and I am not sure of what to do to get a QSL card from them.

I know--ask people around me. I do not see any local people and when I ask on the air, I get all sorts of comments.

So, is there a good book, or something else, for this information?? I got the ARRL piece on QSL cards, but that seems to just say send the cards in with no comments on IRCs or green stamps.

Any help would be appreciated.

Thanks.

------------------- response --------------
Some HF DXers have been working grid squares for at least 10
years and the Japan Amateur Radio League sponsors the Worked
All Square Award (WASA) for working 100 squares (endorsements
at 100 increments).

You might notice that most Japanese QSL cards and some from
Europe the GL or loc. code, which is the Grid Square code.

For $400, you were expecting a full Micor repeater station? You must
be kidding. Hamfest-special repeater stations, with no guarantee, won't
go for under $1000, and from a used equipment dealer, they're typically
$2500-$3000 for a 75 watt PL UHF repeater.

The Micor mobiles and the full repeater stations share much of the same
circuitry. The receivers are identical. The PA's are identical, although
obviously mounted on different heat sinks. The power control,
audio, etc. is almost all identical. The exciters are different - the
base/repeater stations use a VHF exciter with its own channel element
to allow you to pick *any* Tx frequency, while the mobiles have a
UHF exciter that takes the LO from the receiver and beats it up to
produce a 5 MHz shift only, which is fine for amateur service.

I've done many Micor mobile conversions for repeater service. Well over
50. Even if I hurried, I couldn't do a complete conversion in under
10 hours. It's a lot of work to do it right. It's not just as simple
as a couple jumpers and bring out the receiver antenna cable as you
might be led to believe. Even if the guy's time is only worth $20
an hour, it's still a fair deal.

You've got some good suggestions for test content, Gary, but the rest of your post is kicking a dead horse! There`s little question that the current exams are not very good at doing what they purport to want to do. We're not in (much) disagreement there. I still don't think your concerns about "promoting life-long learning" could be satisfied with a one-time all-priveleges entry exam. A PROPERLY designed incentive system seems more likely to do the trick.

I'll ignore the re-introduced comment about CW. There are a few people here who tend to get very personal about that subject, and I've desided for '95 to try to avoid that agravation. I got in on this thread when it looked like it might get away from that topic!

It's refreshing to find even a little common ground with you...though it probably won't last :-)

Happy NU Year!!!

Nope, it was more like a bull pen (baseball vernacular). A place
for you to warm up and unfold your stuff with others who were
at your level. Away from the jeers and sneers of the high and
mighty who might be looking to bash the new guy. There sure
wasn't any derisive comments made novice to novice because
each was just as shaky at the key.

David Broder (Washington Post Writers Group) recently wrote a column about strengthing civic life and the return of civility in public discourse. Part of that article mentioned an essay by Robert D. Putman of Harvard U. called "Bowling Alone" where some 80 million people claim to have bowled in the last year and that's up 10 percent since 1983 yet league bowling declined 40% in the same time span. This ends up being a discussion of "public capital" and it's depletion - a term Putman used to describe quality of civic life.

The point being that without public capital, institutions of self-government become brittle and break...and writing a check to an organization is no substitute for working a problem through with fellow citizens.

In the case of amateur radio, we have a lot of people who are licensed yet never get on the air. We have areas of spectrum looking for utilization yet no one wants to be part of the over all group -- they just want a packet bbs to use or a voice repeater without concern to how all that came to be ...a lot of "open bowlers" but no "league bowlers" that really make it possible for the bowling alleys to be open in the first place.

maybe someone will be able to expand on this a bit....i'm beat right now and about to quit for the day here...

The Boeing Employees Amateur Radio Operators North Society (Bearons) will be offering amateur radio study courses again this Winter. A Novice/Technician course will be offered for those wanting to obtain their first amateur radio license, or to upgrade from Novice to Technician or Tech+. A General/Advanced course will be offered for Technician, Tech+, or General class licensees who would like to upgrade to a higher license class.

Both courses will be held for nine consecutive Tuesday evenings starting January 24, running through March 21, from 6:00 PM to 9:00 PM.

The final class for both courses will be an examination session. All persons wishing to take any FCC Amateur Radio License exam, Novice through Extra, are welcome to attend the examination session on March 21, at 6:30 PM.

Contact Charles Scharlau (NZ0I), at 353-9277, or on packet at NZ0I @ n7oqn should you require additional information.

Classes will be held at the Boeing Everett Activity Center, located at 6400 36th Ave W, just North of the Everett Boeing plant. Take the Boeing freeway to the Seaway Blvd exit. Follow Seaway Blvd north for 2.1 miles. The Activity Center will be on your left. Talk-in will be held on the BEARONS repeater (443.925 MHz, PL 100.0 Hz). Class materials, consisting of license manuals and Morse code practice software for the IBM PC, will be available at the first class session at a cost of $20. Bring a pencil, paper and calculator. There is no charge for the instruction. Registration will be held during the first class. There is no pre-registration.

It's a word. In turn-of-the-century parlance, "hamming" meant something like "playing around for the Hell of it." In radio this gave rise to "ham-fisted", a derogatory term used by professional operators to describe sloppy sending. Something like QLF ("Are you sending with your left foot?").

Take care.

Hello all,

I have an AOR AR1000XLT receiver for sale. The following applies:

- Less Than One Year Old (have purchase receipt)
- Very Little Use
- Receives 0.500Mhz to 1300.0Mhz Continuous (from factory)
- 1000 Memory Channels
- Great Condition
- Howard Bornstein's "Guide to the AR1000"

As mentioned I am including Howard Bornstein's book for an easier understanding on its use.

I am asking $325.00 firm, which includes UPS delivery in the US. If you are interested, please respond directly to me at: asplund@scf.usc.edu

FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 03 JANUARY AND FORECAST FOR 04 JANUARY - 06 JANUARY

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 77/16

GOES satellite data for 02 Jan
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 1.1E+04
Daily Electron Fluence >2 MeV: 3.7E+06 (normal)
X-ray background: A1.6
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
04 Jan 05 Jan 06 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 04 Jan: 78/17

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active, with a minor
storm period 06-09UT.

Estimated Indices : A K Observed A Index 02 Jan
Learmonth 23 4354 3433
Fredericksburg 17 17
Planetary 20 12

Observed Kp for 02 Jan: 1233 2443
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
04 Jan 20 Unsettled to active
05 Jan 15 Quiet to unsettled
06 Jan 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
03 Jan normal fair-normal fair
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
04 Jan normal fair-normal poor-fair
05 Jan normal fair-normal poor-fair
06 Jan normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
03 Jan 2 near predicted to slightly depressed.

Predicted Monthly T-index for January: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
04 Jan 5 Near predicted monthly values to 10% depressed.
05 Jan 15 Near predicted monthly values
06 Jan 15 Near predicted monthly values
COMMENT: IPS HF Communications Warning 16 was issued on 30 December
and is current for interval 3-4 January.

Hello Bob

I'm sorry that you couldn't send me E-Mail direct. I don't have a personal Internet account but my local FidoNet BBS allowed me to receive E-Mail. Unfortunately the week after I posted the information about the Amiga Amateur Radio User Group the facility was withdrawn by the Internet provider. Murph's law!!!

There's a floppy disk which contains information about the group which I will mail to you within the next few days, so look in your post box sometime about 10 January for a padded bag from me. If anyone else wants a copy of this AARUG introduction disk then please send a blank 720k floppy and enoughIRCs for return postage to me at:

Paul Whatton G4DCV
39 Wellington Road
Deal
Kent
CT14 7AL

Tel/fax UK+ 304 368790

All the details are on the floppy but in brief the group membership is free. You just register and then lodge enough SSAEs or IRCs to get the (spasmodic) Newsletter mailed out to you. There's some sample Newsletters on the floppy for you to have a look at.

The group has about 300 members at this time, most in the UK but also many abroad. We also run a free PD library- basically you send a blank floppy

with return postage and it comes back from the librarian with your program on it. I don't bother much because I can freq (FTP) Amiga Ham files from AmigBee BBS in London (Sysop G6LPF).

Currently the group is run completely on a voluntary non-profit making basis so things like the Newsletter aren't that regular (g) but it is a great way of finding those elusive Amiga Ham programs and of contacting other Amiga Hams.

Gary,
Your message was interesting to me. My husband and I have recently purchased a scanner, BC178XL XLT Uniden Bearcat. It has been great fun! I have gone out and gotten the "Police Call" radio and enjoy followint the police cars all around the city. While this is not a "radio" as such I am looking for someone to teach us the "ins and outs" of scanners. Are you interested? What did you start out with? When the "bug" bit you??

: >73, Victor (Tech +)

: //jbaltz

The original poster's question asked if he could operate CW without
passing a test...the answer was "yes". However, without stipulating
the frequency he had in mind, he also used the example of feeding the
audio output of a code practice oscillator into a mike for
on-the-air-practice. That's what people have been trying to clarify
with their answers. If he intends to use that method on any
frequency restricted to A1A mode, he would be in violation.
That's not being a stickler, that's trying to be accurate and helpful.

Since I've received several requests, the following is a verbatim
copy of page AM005 of the new FCC callsign database format description
as obtained on November 1, 1994.

It is my personal opinion that most of these call signs should not
be restricted. I feel that what we are seeing here is another example
of how Political Correctness ultimately rules in Washington.

-fred

AMATEUR RADIO SERVICE DATE: 4/10/92
DATA ELEMENTS & CODES AM0005

7. Edit Required on Data Element (continued)

In all instances, an edit must be made to insure the letter "X" does
not appear as the first letter of the call sign suffix (5th position)
for 2X3 call signs. For example, WA1XBC is not a valid call sign;
however, W1XBC, WA1X, W1XA, WA1XB, and W1X are valid call signs.

Members of the public have found some call signs to be offensive, in
poor taste, or objectionable for other reasons. Additionally, some
call sign suffixes could be confused with international distress or
information codes contained in ITU regulations. The following list
contains call sign suffixes which are not to be issued. However, if
call signs containing these suffixes already exist, they may continue
to be held, and may be renewed or modified.

ASS BAG BOX COC

Ok here is a chance to get it off your chest...is six meters worth the time and money to get into???
Read a good book on "The Magic Band" and the author makes it sound like the next ham heaven...not much QRM...polite operators and gear that still be had for reasonable $$$ used and antennas easy to build.
So let me know...I can work all the bands but find not having a lot of time, I thought concentrating on six meters might be a good way to be active, focused, and enjoy ham radio like I used to.

MAXIMUM PERMISSABLE ACCORDING TO THE CURVE.

PROPOSED:
42 M in HORIZONTAL DIRECTION @ 24 HR CONTINUOUS DUTY IS THE MAXIMUM
PERMISSABLE ACCORDING TO PROPOSED CURVE

WHERE YOU OBTAIN ADDITIONAL INFORMATION:

I have gathered alot of data on this subject, I can reply to those
who need more info.

A little background:

I am a neighbor to an EXTRA AND A NO-CODE.

My home is in a direct horizontal plane to the <hf>beam.

All data was gathered from FCC, and ANSI.

All data is available in print form from GPO.

OR, I can send just the current and proposed curves to you in .GIF
format...

Some clippings:

First of all do you have our OET Bulletin No.56 and OST Bulletin 65? If you
do not have them, ANSI tel. 212.642.4900 or IEEE 800.678.IEEE

--
Q 4. What are the potential effects, long and short term, of the radiation coming from the transmitter?

A See OET Bulletin 56 pages 4-6

Q 5. Do these effects warrant considerations with respect to sitting and safety, considering the antenna does point at my house, when used at full power?, and is it common for directional antennas to " point" directly at "structures" for 1500 watt output with considerations for an occupant who may not be aware it is happening?

A The effects of RF radiation have been taken into effect based on our current RF Guidelines and proposed guidelines. These guidelines created by the IEEE/ANSI are based on the latest Studies, Ideas, Papers and evidence submitted by private industry, Universities, the Military, and other public working groups. (See pages 6-9 of OET 56).The proposed guideline for which we are basing our predictions on has a factor of 50 built into it. The graph and calculations are for continuous exposure.

Here are some consulting firms in the Washington
DC area that do measurement work they might know of someone in your local area.
Jules Cohen & Asso. Po Box 18415, Washington DC, 20036-8415 (202)-659-3707
Lohnes & Culver 8309 Cherry Lane, Laurel Md 20707-4830 (301)-776-4488
Cohen Dippel & Everist 1300 L St NW Sute 1100, Washington DC,20005
(202)-898-0111

Where are the various hot spots WRT tower, antenna, and slopers? Can you show me graphically how strong the side lobes of radiation are coming in front of the main beam?, and behind it?

A This information is not known. All cases are different as to where, how much RF radiation they are exposed to. The closer you are to the antenna the more of the RF radiation field you are in. There are a lot of factors to consider so there is no generic graph. If you are standing in front of a directional antenna you are in a higher field than standing to the rear of the antenna. At the sides of the beam antenna the signal is greatly reduced also. Slopers radiate bi directional front and back equally and little from the sides.

>> Could you plot a graph of power density exposure over time, or how long it would take to exceed the exposure limits for a given range to the transmitter? (make graph as a function of time, ex.: dW//dt | dS/dt ?)

A The program we use is called MSAM it is available from the National Telecommunications Information Agency, U.S. Department of Commerce. They can be accessed by telnet at FEDWORLD. Or FTP NTIAOSM1.NTIA.DOC.GOV pub\msam.

for additional information or net pointers please email:

Cleve,
The real question is "is 6 meters for me"? That depends a lot on
the sort of conditions you like. 6 meters has been one of my favorite
bands for over 20 years. The reasons I like it are that there is
usually very little activity unless (very important...) propogation
is good. For years I ran RTTY on 6 meters AM with a group of local
RTTY fanatics. QRM was unheard of! Later, at the top of the
sunspot cycles, I enjoyed SSB, and FM (52.525MHz, simplex). It
is quite a kick to work Arkansas from Florida with 2 watts on
FM!!! I would strongly suggest you see how much activity there is
locally before spending big $$$'s because things only really get
'interesting' around the peak of the sunspot cycle. Also, there
are a few repeaters on 6 these days...

Oh yeah...transmitting on the 6 meter band WILL cause TVI, especially
if you have channel 2 in your area. Television channel 2 is adjacent
to '6', and TV front ends are notoriously broad. :-(Something to
consider.

Source record: 254018

Walter --

In response to your question concerning linked repeater systems, the one I am most familiar with uses a large number of low-to-medium profile recieve sites, which use a "voting" system that determines which recieve site is recieving the strongest signal. The strongest signal is then transmitted (how I don't know, probably a 440 or similar link) to one or more high-profile transmit sites. This transmit site then repeats the information on the output frequency. This is probably the easiest method to implement a repeater network.

The Phelps machine (147.090+) in Phelps, KY, often has a recieve-only link operative for what I believe is the same repeater system you are mentioning. If you listen, you will notice that the courtesy tones are actually morse characters at about 18WPM or so. By learning the correlation of characters to positions, you can figure out roughly where a given signal is coming from.

Which areas of KY/OH are you searching for repeaters? I live in the Ashland, KY, area, and know of these repeaters: 147.240+, 147.940-, 146.640-(WV), 146.715-
Also, consider purchasing an ARRL Repeater Directory. ($6)

I became a licensed ham in 1992 at 61 years of age. Thus I have lived through but was not active in the early days (old days?) of amateur radio. As a Boy Scout I did visit a ham shack in 1947-48. It was filled with WW II radio gear and QSL cards were displayed on the walls.

Now I am reading the 50 year history articles in the January 1995 issue of "CQ" magazine and find them very interesting. I'm a bit of a history buff in several areas.

Have you read those articles? What is your reaction to them? What are your recollections of those early days? Please share with us newcomers.

I would like to read your recollections of those years posted in this newsgroup so that I and others may gain a greater understanding of our hobby.

Thank you, Arthur, N1NhZ, Member
Boston (MA) Amateur Radio Club, 73

155. KAM to Kenwood TA205AT HT Interface

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-04 07:07:40 UTC
From: dbledsoe@netcom.com
Message-ID: <dbledsoeD1vD4t.6M3@netcom.com>
Source record: 253834

I need to get the correct connector wiring to allow a KAM TNC to properly key a Kenwood TA-205AT HT for packet use. If you have the wiring scheme, please send it to me via E-Mail. Thanks ... and best 73's ...

>Oh yeah...transmitting on the 6 meter band WILL cause TVI, especially
>if you have channel 2 in your area. Television channel 2 is adjacent
>to '6', and TV front ends are notoriously broad. :-(Something to
>consider.

Cleve,

What Steve says here about activity is true. There are long periods of quiet and then for a few hours the band opens and it is a blast. Being in Iowa and having the band open up really is neat because this end is the busy end of a pile-up. I and another operator in the next grid square north set up about 25 kHz apart and work the people directing them towards each other as we are about the only operators in the two grid squares on a regular basis. There are others that are active during contests but not the rest of the time. The best way to find the activity on the band is to leave a radio on the calling frequency all the time and squelch it. When the squelch breaks the band is opening.

Now in my situation the local TV channel 2 is not a problem. I run 10 watts into a 5 element beam at 40 feet and my TV antenna is 20 to 30 feet away and there is NO interference between my transmitter and the TV set on channel 2. Now if you run high power there is the likelyhood of TVI. But on 6 you do not need the hight power when the band opens up. I have run 3 watts on CW into 3 elements at 6 feet and got through a pile up to Texas. The other hams that were in the area couldn't believe that I was able to do that. It's fun too watch peoples reaction when you do something like that.

As for radios I got an Icom 551 for 175.00 dollars at an auction because everyone was afraid of TVI.

Good luck on your decision and hopefully this information will help you out some.

>

100% agreement with your thoughts on the subject. One point on the new hams (Novice/Tech), though. I guess some would consider that I go to extreme lengths to get a QSL to a new ham. To me it is a rare pleasure to be a Novice or Tech Pluses first contact on CW and I would do most anything to get a confirmation of the contact in their hands. It is very frustrating holding onto these cards waiting for the quarterly updates of the callbook to appear. And every quarter, I send out 20-25 cards to these new hams welcoming them to the hobby. To receive a response back from them is an even greater pleasure. Most of the time they aren't expecting anything and are ecstatic to receive something.

If you want a good CW ragchew, do it in the Novice bands - you still meet interesting people, and you will probably be encouraging someone to upgrade.

It is unfortunate that QSLing is becoming a lost art. Now people are arguing whether the QSL you treasure is valid or not. I can remember not too long ago a discussion about QSLs being valid based upon if it followed a meaningful QSO or if it was just to secure "wallpaper" down the road. I do both and I treasure both.

>What is the origination of the term HAM referring to radio operators?
>
>Is it an abbreviation or word?

It's now a word, as in "ham radio" = amateur radio, as a hobby.
It is the first letter of the last name of each of three amateur radio
pioneers, according to some ham radio information I read some decades
ago, but I don't recall ever reading what those three names actually were.

The HamComm interface as described in the manual for HamComm 3.0 works fine with JVFAX 7.0. Of course you have to tell it about the type of interface. Start JVFAX, go to the 'Config' screen and set the interface type to HAMCOMM. This should fix your PTT problem. For TX tones thru the COM port select 'serial audio'.

165. Tire QRN, how to cure?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-04 12:38:26 UTC
From: rc@itchy.ncsl.NIst.GOV
Message-ID: <9501041238.AA05579@itchy.ncsl.nist.gov>
Source record: 254014

Ok all you bright folks, I have a problem!

I bought new tires for my car and now have "sizzling" QRN on some road surfaces. That's on the AM broadcast band. No such trouble with the old Michelin tires, but the new Pirelli 300 ones have the problem; same stations same places as before.

The noise goes away when brakes are applied, thus really grounding the moving part of the axle/wheel assembly. I know that QRN from static electricity arcing across wheel bearings was a fairly common problem in the Bad Old Days (BOD), but I doubt if that could be the problem since only the wheels were removed in the tire swap.

Could the new tires be slightly piezoelectric? The noise is worse on a jiggly road.
v-- see above
I vaguely remember some magic conductive powder from the BOD which was to be blown into tires to cure this type of noise. DOES IT STILL EXIST? ANY OTHER SUGGESTIONS? I watched while the tires were changed, so don't think that there was any accident in jacking the car.

Any and all suggestions welcomed.

[907]

The following advisory is not necessarily for broadcast.
This is just a reminder that the address for the Newsline Support Fund is Newsline, in care of Andy Jarema - N6TCQ, Post Office Box 660937, Arcadia, California 91066. Again, and as always, we thank you. This ends the closed circuit with Newsline report number 907 for release on Friday, December 30, 1994 to follow.

The following is a QST

A communications industry group says it's time for the FCC to show local governments who's the boss on radio matters. The EAA wants federal regulation to stop any and all local radio frequency interference rules. Also, a new Russian ham satellite is in orbit and operation from Palestine may not count for DXCC. These stories and more on Newsline report number 907 coming your way right now!

(*****
LOBBY GROUP PROPOSES FEDERAL BAN ON LOCAL RFI LAWS

If a Washington-based communications trade association gets its way, state and local regulation of radio frequency energy matters will be a thing of the past. Instead, jurisdiction on any issue involving RF should rest with the FCC. That's what the Electromagnetic Energy Association says must happen if new technologies are to be developed. As Newsline's David Black, KB4KCH, reports from our Southeast Bureau in Alabama, what the Association wants could have a major impact on amateur radio. This could be the start of sweeping new rules that take away power by local governments to regulate radio frequency issues. The Electromagnetic Energy Association is made up of some of America's leading communications and telecommunications companies. The EEA says existing technologies are on a collision course with increasing state and local RF energy regulation. Amateur radio operators will be watching this one with interest.
Don Stoner, W6TNS, is past president of the National Amateur Radio Association. He says what the Energy Association wants could give hams new ammunition when fighting locally imposed operating restrictions. Stoner says he's backing the Energy Association 100-percent.
Without FCC preemption, the association says technologies including advanced television, digital audio broadcasting, and personal communications services cannot be fully realized. In a December 22nd petition, the Association asks the FCC to issue a Further Notice of Proposed Rulemaking on the matter. EEA Chairman Jesse Russell calls FCC preemption of state and local regulation of RF energy something whose time has come.
The EEA says FCC preemption is warranted whenever local laws obstruct the intended social, technological or economic benefits of continued service or future advancements in communications.

(*****
RS-15 IN ORBIT

The new Russian Radiosport 15 satellite is in orbit and on the air. According to information supplied by Leonid Labutin, UA3CR, RS-15 was launched on December 26th at 03:00 UTC into a 64 degree inclination orbit with a period of 124 minutes 24 seconds. The apogee and perigee distance from earth were stated as 1946 and 1809 kilometers respectively.

(*****
DX - PALESTINE ZC6B UPDATE

Don't look for the December 11th, ZC6B operation to be counted for DXCC credit. This is because the call sign has not been valid since July of 1968. That's when the ZC6 prefix was deleted from the DXCC countries list. While the operator who is identified as Dr. Sammi Tarazi has reportedly sent the paperwork for this operation to the ARRL under the current DXCC rules it is unlikely

that DXCC credit for Palestine using the ZC6 prefix can be reinstated. This is because the allocation list of international call signs shows that the prefix ZC6 is legally allocated to the United Kingdom of Great Britain and Northern Ireland.
Even if no DXCC credit is granted the QSL card from that operation is truly a collectors item. If you were lucky enough to contact ZC6B, QSL to Dr. Sami Tarazi, Box 1008, Gaza, Palestine via Israel.

(*****
NEO NAZI PACKET

A South American Neo-Nazi ham radio group is spewing message of hate out onto the worldwide packet radio airwaves. Amateur radio operators throughout north America are outraged by a message originated under the call sign PP5SH that endorse the so called "Skin Head" movement and other fascist doctrine.
The pro-Nazi posting was transmitted into the worldwide packet network through the PY2GN Sat Gateway in Brazil. It herald the return of fascism to rule the world.
While many SySops tried to kill the pro-Nazi posting as soon as it appeared, the sheer volume and duplicity of routing is making censorship of this messages an almost impossible task.

(*****
ORACLE TO NZART: READ OUR LIPS!

ORACLE, New Zealand' Organization Requesting Alternatives through Code Less Examinations has told that nations national Amateur Radio society that it plans to continue its lobbying efforts to overturn mandatory Morse Code testing. The lobby group has also issued a policy paper that takes to task the position of the New Zealand's Amateur Radio Transmitters. As reported last week, the NZART endorses continuing the status quo.
Specifically, ORACLE says that the NZART statement does not accurately reflect the actual position of Morse code policy in New Zealand. Rather it reflects a conservative view of the national ham radio society.
With regard to the Minister of Communications letter to NZART also reported on by Newsline, ORACLE Managers say that the response says that the ministry is open to further discussion on this matter. They note that the Minister is legally the Government spokesperson for amateur radio. ORACLE interprets his words as meaning it would be unwise to adopt the three very specific positions recently proposed by the NZART.
ORACLE notes that the letter shows that the New Zealand Government has a more progressive view of amateur radio than appears to be the case for NZART or the IARU on Morse code policy. It believes that there can be a change at such time as evidence of significant opinion is produced.
Finally, ORACLE says that it is recognized by the New Zealand

Government on this issue. It guarantees it will be active in producing evidence in support of abolishing Morse Code testing worldwide.

(*****
2400-MHz COMMENTS FILED BY ARRL

The ARRL has filed comments on an FCC notice of proposed rule making, in ET Docket 94-32, a proposal to reallocate a block of spectrum from federal government to commercial use. Some of that block includes parts of the 2400-MHz band shared by Amateur Radio on a secondary basis with the government.
The ARRL asked that the Amateur Service be given primary allocation status at 2402 to 2417 MHz, and that it be given at least co-primary status at 2390 to 2400 MHz.
The League also said that because a previous government study had recommended the 2400 to 2402 MHz segment for amateur use, it would be desirable to make the entire segment 2390 to 2450 MHz amateur primary.
The ARRL notes that any fixed or mobile service station that is granted an assignment at 2390 to 2400 MHz, must be required to protect the Amateur Service from interference and must tolerate any interference received from amateur stations.
In summation, the League requested that the FCC not make any additional allocations in the 2390 to 2417 MHz band. Rather it wants to have Amateur Radio made the primary allocation status in that band.

NEW 2 METER TROPPO RECORD

In DX, new tropospheric ducting, continental distance record has been reported on the 2 meter band. This, on November 5th when Rene Shaw, WB4MJE, of Big Pine Key, Florida, and Serge Spilfogel VE1KG, of Halifax, Nova Scotia worked over a 1687 mile path. The previous record was 1468 miles was set by K5WXZ and K1RJH. It had stood since October of 1968.

(*****
DXCC LIST

Also a reminder from the American Radio relay League that the annual DXCC list will not appear in QST magazine. Rather, look for it in the 1995 DXCC yearbook due out in February. Anyone who made a DXCC submission during the past twelve months will automatically receive a copy.

(*****
CABLE PIRACY SENTENCE

The National Cable Television Association's anti-piracy division is praising an Arkansas judge's decision requiring a man convicted of cable copyright theft to pay a record $2.7 million in restitution.
Jan Gregory Manzer, who went by the alias V.C. Hacker, was fined the $2.7 million and sentenced to 46 months in jail in U.S. District Court in Hot Springs, Arkansas after being convicted of illegally modifying General Instruments VideoCipher descramblers. He was also found guilty of constructing satellite receivers with software that allowed other dealers to receive unscrambled signals.
Jim Allen, who heads up the NCTA's office of cable signal theft says that operations like Manzer cost the cable and satellite industry billions of dollars a year in stolen programming services. The message of this court decision is that cable piracy leads to jail time."
At the Manzer sentencing hearing, representatives of HBO and Cable Home Communications Corp. testified that Manzer's actions cost the industry millions in lost revenue.
Manzer is expected to appeal.

From: jesposit@sctcorp.COM
Message-ID: <m0rPVuo-0003PhC@sctladm.sctcorp.com>
Source record: 253842

Darrell, NR3Y, asked about whether or not IOTA material is copyrighted. I believe that the RSGB claims that it is. Nonetheless, to receive any of the IOTA awards, it is necessary for the applicant to have their own officially-obtained IOTA directory. Inside each directory is a unique registered number assigned only to that applicant by the IOTA Administrator. That number must be included with each submission for award credit. I hope this has shed some light on the program. An excellent article on the program was published in CQ or QST within the last two years. You might want to research it.

There is one item I would like to add to this thread. Hopefully it does
not apply to any of us :)

I have seen a number of older HF rigs advertised at close to what they
cost new! I realize with inflation and the cost escalation of new rigs

that a good price may be a little more, but:

When someone advertises a 'Great Novice Rig' and it costs as much as it did new, a newcomer needs a good elmer to help him in purchasing the right rig at a fair price.

It does not do much for this great hobby if a newcomer finds that they paid to much for their first rig. I think in this case the price police are justified in their followup postings.

Just my thoughts.

Tom NG3Q

171. How to Find Your Grid Locator

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-04 13:41:53 UTC
From: rc@itchy.ncsl.NIst.GOV
Message-ID: <9501041341.AA05591@itchy.ncsl.nist.gov>
Source record: 253852

There will surely be two dozen postings responding to the recent question,
but here is the 25th....

How to find you grid locator....

1. The hard part: Find the geographic coordinates of your station. Use USGS
quadrangles, or NOS Sectional Aeronautical Charts, or borrow a GPS
receiver.

2. The easy part: Convert the geographical coordinates into grid locator.
Use a Trimble GPS receiver, which reads in grids, or...There are many
convversion programs free for downloading, but it's really
too simple to bother with a program.
a) The conversion rule is "read right and then up", starting at the south
pole and international date line (180 degree longitude).
b) The locator consists of alternating pairs of letters and numbers, to
the degree of resolution desired, ie FM19JB35RS53TU....
c) The first two letters define the grid field. Each field is 20 degrees
in longitude (EW) by 10 degree in latitude (NE). Thus the field just
east fo the Date line, running north from the south pole is AA. The
field from 80 W to 60 W and 30 N to 40 N is FM. The letters run from
A through R.
d) Each field is divided into"squares",each 2 degrees EW and 1 degree NS,
starting in the "lower left" (SW corner). They are numbered 0 thru 9.
my location is between 78 and 76 W and 39 and 40 N, thus the 4-char
locator is FM19.
e) The next pair of letters resolves each 1x2 degree square into 24x24
subsquares, each 2.5 by 5 minutes, lettered A through X, again
starting in the SW corner of the 4-char grid. My location is about
77 degrees 12.2 minutes W and 39 degrees 3.5 minutes N, or FM19JB .
f) You can continue this forever, with the numbers dividing the previous
quadrangle into 10 parts and the letters dividing it into 24 parts.

I am trying to promote the convention that any portion of the locator which is
SURE, whould be in CAPS, guessed portions in lowercase.

Europeans all seem to know their 6-character locator, while Americans - being
"geographically challenged" - seem to be lucky to get their 4-character
locator correct (just look at the crossed-out locator on my QSL card!!).

Does this help?

I use both of these programs without problems. I don't have the schematic here in front of me but it sounds like you have your RTS line high all the time. I think that is the one hooked to the PTT circuit. Anyway recheck all your connections and make sure you don't have RTS and DTR switched around. I believe those are the two key lines that control where the "Vcc" goes for rcv or xmit.

Unless there's a cable system in your area, in which case you can pretty much forget about TVI. If there's no cable, you can build the filter in the ARRL handbook (in the 'Setting Up a Station' chapter) and leave the rest to the neighbors.

I moved last weekend, and had an opportunity to go through the many boxes of accumulated junk I have (and throw much of it out).

One box I found was my old Boy Scout stuff, including a Boy Scout Handbook from 1979-80 or so, and my uncle's "Handbook For Boys" from the late 1940s. Both books have a Morse Code table.

My book from around '79 has the listings in ".- -... -.-." form.

My uncle's book from around '46 has the listings in "dit-dah, dah-dit-dit-dit, dah-dit-dah-dit" form.

(Neither book says anything about amateur radio, though.)

Sorry, that might be the definition of "amateure" radio, whatever that is, but it isn't the definition of amateur radio. When people get together in voluntary cooperation, as in a church, the Red Cross, or in amateur radio groups, it's not a commercial venture. It's a voluntary cooperative activity to enhance the public good, or service, that can be supplied by group efforts over that which can be provided by individuals acting alone.

What Kevin appears to be lamenting is that too many amateurs treat the service, and their participation in it, as "just a hobby" instead of as a voluntary enterprise intended to advance the public and national interest as outlined in the charter of the amateur radio service in Part 97.1.

I've been archiving these since October for callers to my BBS, The
CQ Centre. I'm afraid it's an international call for you, on 01144
1753 595468 or 593524.

Anyway, here goes:

SB DX @ ARL $ARLD062
ARLD062 DX news

ZCZC AE60
QST de W1AW
DX Bulletin 62 ARLD062
>From ARRL Headquarters
Newington CT October 13, 1994
To all radio amateurs

SB DX ARL ARLD062
ARLD062 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Bob, W5KNE, Chod, VP2ML, Glenn, W6OTC, Joe, NJ1Q, the Ohio/Penn DX Bulletin, QRZ DX, The DX Bulletin, and the Contest Corral column from the pages of QST. Thanks.

SWAZILAND. Adam, SP2JYX, signs 3DA/SP2JYX and has been on 15 and 20 meters, most of the time on SSB. QSL via CBA.

RWANDA. Hartmut, 9X5HG, will be active until about October 22, at which time he plans on leaving Rwanda. Tips include 7001 kHz around 0300z and 14025 kHz around 2030z. QSL via the DL Bureau or to his home CBA.

THAILAND. Reiner, DL2VK, will be here for approximately 6 months. He will be signing HS0/DL2VK and plans to operate primarily CW. Some Packet, AmTOR, PacTOR and SSB may be in the works.

LAOS. Minoru, JA3MNP, should be on the air from the station of XW8KPL as XW3MNP October 20 to 27, including RTTY. QSL via PO Box 59, Kyotonishi 6165, Japan.

CAMBODIA. XU7VK has been on 3506 kHz at around 1316z.

SAUDI ARABIA. Mike, K3UOC, is now working in Riyadh. If plans to obtain a Saudi license fall through, he hopes to be able to operate 7Z1AB, the station at the U.S. Embassy.

NAURU. Teo, DJ1RL, and Harry, DL6NA, should be signing C2/ their call signs by the time this bulletin hits the airwaves. Teo is the CW op and Harry likes SSB. They will concentrate on the lower bands. Try 1827/1832 kHz. QSL via the DARC Bureau or their home calls. The following three entries are their planned itinerary after Nauru operations.

FIJI as 3D2AN and 3D2FT, October 17, 18 and 19.

SOUTH COOK ISLANDS as ZK1/ their home calls, October 19 to 22.

FRENCH POLYNESIA as FO/ their home calls, October 22 to 28.

SOMALIA. SM7CIP operates T5AR with a barefoot rig and low profile antennas. His QSLs will not be printed until early 1995, so please be patient. QSL via SM0DJZ.

SYRIA. Mike, VE3UWC, is with UN Peace-keeping forces here for about 3 more months. He signs VE3UWC/4U, though little is known of his

operating habits other than to try 14220 kHz between 2130 and 2200z.

ETHIOPIA. Listen for ET3BT on the Family Hour Net at 14226.5 kHz around 2300z.

MACAO. Listen for Roger, G3SXW, and Nigel, G3TXF, around October 19 for a week of CW operating. Plans are to emphasize LF and WARC bands.

GUYANA. Listen for Eddie, G0AZT, and Glenn, W6OTC, operating RTTY as 8R1TT. Plans are to be in on the JARTS WW RTTY Contest this weekend. Check 80 through 10 meters before and after the contest. QSL via Eddie Schneider, POB 5194, Richmond, CA 94805.

ANGUILLA/SINT MAARTEN. Warren, WB1HBB, will be doing some operating while vacationing on these islands. He will sign VP2E/WB1HBB October 18 through 20, and PJ7/WB1HBB from October 21 through 28. Try 14263 kHz at 1230 and 2100z. QSL his home call.

COCOS ISLAND. TI2JJP should be on as TI9JJP October 20 to 29.

GUANTANAMO BAY. Larry, WB6VGI, will be signing KG4ML until October 21. Though 17 meters is his bread and butter, he has occasionally strayed to 30 and 40 meters. QSL via CBA.

QSL CORRECTION, or please use phonetics. Rick, AA6KS, reports that he is not, repeat not the QSL Manager for ZF8BS. The correct route is via AA6KX.

THIS WEEKEND ON THE RADIO. On the air operating events for October 15 and 16 include the Simulated Emergency Test, 36th Boy Scout Jamboree On The Air, aka JOTA, the JARTS WW RTTY Contest, QRP ARCI Fall CW QSO Party and the RSGB 21/28 MHz CW Contest. For rules and more information on these events, check pages 96 and 126 of September QST.

QST de W1AW
DX Bulletin 63 ARLD063
>From ARRL Headquarters
Newington CT October 20, 1994
To all radio amateurs

SB DX ARL ARLD063
ARLD063 DX news

The items in this week's bulletin are courtesy of Marilyn, N6VAW, Jeff, KU8E, Tedd, KB8NW, the Ohio/Penn DX Bulletin, Bob, W5KNE, QRZ DX, Chod VP2ML, The DX Bulletin and the Contest Corral column from

the pages of QST magazine. Thanks.

THE GAMBIA. The Whitton Amateur Radio Group of London plans a DXpedition to C5-land. Hopes are to operate on 13 amateur bands from 160 meters to 2.3 GHz. The Gambia is very rare on satellite and this may be the first Mode S operation from this DXCC country. Dates will be between October 23 and November 10. During the CQWW DX SSB weekend, listen for C56DX during the CQWW DX Contest. Other times they will sign C56/G0MRF. QSL via G0MRF.

BELAU/YAPP. OKDXA members Jim, WV5S, and Coy, N5OK, will sign KC6SS and KC6OK respectively from October 25 to November 2. From there it is on to Yapp in the Eastern Caroline Islands November 2 to 7, signing V63SH and V63OH. QSL via their home calls.

MADEIRA ISLANDS. Frank, DL8KWS, was signing DL8KWS/CT3 but now has the call CR9WAG. Another German op is active as DL3KUD/CT3. Both stations are very busy on CW and plan to be on the air through October 27. QSL via their home calls.

LUXEMBOURG. A group of Dutch operators will sign LX/PA3DKC on HF and LX/PA3CDI on 6 meters from October 26 to 30.

SEYCHELLES. Andres, EA4EGZ, will operate from Mahe Island October 21 to 28, with activity 40 through 10 meter CW.

PITCAIRN ISLAND. Listen for VR6MW and other VR6 stations around 0600z with a net on 7083 kHz SSB.

CAMBODIA. Europeans were working XU1MF on 18138 at 1515z on October 11. QSL via JA1JTU.

The following are planned operations for the upcoming CQWW DX SSB Contest.

NAMIBIA. Listen for N0AFW, WA0PUJ, N9NS, AH9B, NH6UT and V51GB from October 25 to November 6 as V51T. The Americans will sign V51/ their home calls before and after the contest period. QSL V51T and V51/ stations via WA2FIJ.

ANTIGUA. Members of the Frankford Radio Club, FRC, will be active as Team Antigua signing V26B. Non-contest calls will be V26A, V26B and V26E. QSL V26A via WB3DNA, V26B via WT3Q, and V26E via AB2E.

SAINT LUCIA. Members of the Southwest Ohio DX Association will be on as J6DX. Before and after the contest, from October 22 to November 5, members will be on all bands using a variety of call signs.

GUYANA. Marko, OH6DO, aka AB6NJ and VR2NJ, will be signing 8R1K. He is planning a serious Single Op/All Band effort. QSL via OH6DO CBA only.

BURUNDI. Paul, 9Q5EXV, and a few other 9Q5 ops plan to be active during the contest as 9U4U.

GUANTANAMO BAY. Jeff, WI2T, will man a Single Op effort, work schedule permitting, signing KG4JO. QSL via WI2T.

ANTIGUA. Ratko, YU1NR, will be active for 20 days starting October 26. He will participate in the contest as V28NR. QSL via YU1NR, Novakovic Ratko, PO Box 145, YU-34000 Kragujevac, Serbia.

BELGIUM. OT4T will be a multi/single effort from the QTH of ON4UN, famed author of Low Band DXing. Expect some big signals on the low bands.

REVILLAGIGEDO ISLANDS. XF4M will be an international team effort from Socorro Island. They will be on all bands, most modes, and as a bonus will operate through RS12. QSL via JH1AJT.

SAINT MARTIN. FJ5AB will be on as a multi-multi effort. Before and after the contest, operators N2HIG, K2MME, AA2SZ, N0IMH and F6GOX will operate signing FJ5/ their home calls.

CANADA, ZONE 2. VE2NRK by WJ2O, and VE2TJA by WB2K, will operate single op, all band, high power in the contest. QSL via their home call signs.

ASCENSION. Jim, N6TJ, plans single band work on 20 meters as ZD8Z. QSL via VE3HO.

NEVIS ISLAND. V47NS by W9NSZ will also be a 20 meter single band entry.

CURACAO. Seppo, OH1VR, will be shooting for a record on 40 meters as PJ9U.

SINT MAARTEN. PJ8Z will be by KI4HN, KA9FOX and N0BSH. QSL via KA9FOX.

SOUTH COOK ISLANDS. Marilyn, N6VAW, and Rich, WB6UDS, will be signing ZK1VAW and ZK1UDS respectively, October 24 to November 5 from Raratonga.

FRENCH POLYNESIA. Listen for FO/DJ1RL and FO/DL6NA between October 22 and 28.

THIS WEEKEND ON THE RADIO. The Texas QSO Party, sponsored by the Texas DX Society, runs from 1400z October 22 to 2200z October 23. In this phone and CW event, Texas stations will send their name and county. Other stateside stations exchange name and state, VE/DX stations exchange name only. Full details appear on page 126 of October QST.

SB DX ARL ARLD064
ARLD064 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Bob, KA1XN, Chod, VP2ML, The DX Bulletin, Adam, N7VEW, Mathieu, F5SHQ, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SOUTHERN SUDAN. John, PA3CXC, is on signing PA3CXC/ST0. Check 18075 kHz between 1800 and 2200z, 7005 kHz around 0315z and 21020 kHz after 2200z. QSL via his CBA.

TOGO and CAMEROON. Adam, N7VEW, QSL manager for missionaries 5V7MD and TJ1JR, has announced the following skeds. Wednesdays at 2230z on 14165 kHz with TJ1JR and Thursdays at 2200z on 14165 kHz with 5V7MD. After the skeds 5V7MD or TJ1JR will usually hang around or move up the band to work some stations. QSL TJ1JR and 5V7MD to N7VEW at his 1994 CBA with an SASE. Please, no bureau cards.

MACAO. G3SXW and G3TXF are active as XX9SXW and XX9TXF. They operate mostly CW.

COCOS ISLANDS. TI9JJP is now active and should remain so through October 29. Check 14195 kHz and the usual DX frequencies.

80 METERS. A group of Asian operators including EX0V, EY8MM, UN7VV and AP2SD, are on a daily lookout trying to work west coast stations. Try 3795 kHz between 1200 and 1400z.

U.A.E. Don, WB2DND, will be visiting Dubai from November 11 to 16. Listen on 20 meters at 1300z on either 14025 kHz CW or 14090 RTTY, 14240 SSB at 2100z and 80/160 meters each morning at 0200z.

CUBA. A group of Cuban and Portugese hams will activate CO9OTA in the archipelago Jardines de la Reina between November 7 to 9.

Arnie, CO2KK, is now active on 160 meters. QSL via Arnaldo Coro, PO Box 6060, Habana Cuba 10600.

TAIWAN. WB4IUX plans to be in Taiwan either November 7, 8 and 9 or 16, 17 and 18. He is working feverishly on getting permission to operate. If he can secure this permission, plans are to operate almost exclusively 80 and 40 meters to give low band operators a chance for BV. Look for him in the 7008 to 7012 and 3508 to 3512 windows.

THIS WEEKEND ON THE RADIO. The CQ World Wide DX Contest, phone, is your chance to grab some new ones for your DXCC total. The Test runs from 0000z October 29 to 2400z October 30. All the details are in September QST, page 126. Here are some of the planned efforts for what is referred to by some as CQ World War.

SAUDI ARABIA. Terry, N4KT will be on operating HZ1AB solo on 80 meters.

EGYPT. There have been rumblings that SU2MT will be active in both the SSB and CW weekends of CQWW as a multi/single entry. Meanwhile, look for him on 15 meters around 1200z or 20 meters between 1700 and 2000z.

THAILAND. Fred, K3ZO/HS0ZAR, says members of the Radio Amateur Society of Thailand are planning major efforts in both the SSB and CW weekends. Listen for HS7AS and HS0AC.

TAJIKISTAN. Nodir, EY8MM, is gearing up for a single op/multiband entry. Listen for him on 160, 80 and 40 meters. It is believed that this will be the only station on from Tajikistan in this test. QSL via DL8WN. He also plans to be active during the CW weekend as EY3A with team members EY8WW, EY8QX, EY8CQ, EY8JX and UA3AB.

CORSICA. DL6RAI, DL5MAE, DL5MFF, DJ0MBU and DF4RD will be visiting TK5EL to activate that call as a multi/single entry. Before the contest listen for them signing TK/ their own call signs.

TURKS AND CAICOS ISLANDS. A group from the North Florida DX Association, NFDXA, will be traveling to VP5 to operate as multi/single using the call sign VP5Y.

GUANTANAMO BAY. Jeff, WI2T, will be active as KG4JO, single op, his work schedule permitting. QSL via WI2T.

BELAU/YAPP. Jim, WV5S, and Coy, N5OK, of the Oklahoma DX Association will be returning to Belau. Their old calls, KC6SS and KC6OK, may be used. They plan to be on until November 2. Emphasis will be CW on 160, 80 and WARC bands, with a chance for some RTTY. QSL via their home calls. After Belau they will be on from Yapp. Listen for V63SH and V63OH between November 2 and 9.

CANADA, CQ ZONE 2. John, WB2K and Davis, WJ2O, will be operating separate single op stations from locations about 20 miles apart. WB2K will be sign VE2TJA. WJ2O will be on as WJ2O/VE2. QSL via their home calls.

ANGUILLA. K1DG and KA1XN will be in the fray as VP2EB. They will be active before and after the contest starting October 26 and ending November 1, as VP2E/K1DG and VP2E/KA1XN. Listen for them on 3753 and 14152 kHz.

GUERNSEY ISLAND. Listen for GU/F6FGN/P and GU/F5SHQ/P from October 28 to November 4 on SSB and CW, 80 through 10 meters. QSL direct to PO Box 14, 44521 OUDON, France.

ISLAND PING PONG. JA1ELY, JA1ETQ, JA1IDY and JL1UXH will be on from Comoros October 24 to 26, Mayotte Island October 27 and 28, and back to Comoros for the 29th and 30th. JA1OEM will be on from Reunion October 25 to 30 and then Madagascar as 5R8HP from November 1 to 20.

OTHERS TO LISTEN FOR include BV/N4MQX, C56DX, 3DA0Z, 5X1HR, 6D2X, 8R1K, HC8A, OH0MM, TO5MM by N3ADL, 4U4U, V29NR, V47WK, XE2DX, ZK2XN and ZV7C. Good luck in the test.

ARLD065 DX news

The items in this week's bulletin are courtesy of Kirsti, VK9NL, the HIDXA, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column in QST. Thanks.

BHUTAN. Despite poor propagation conditions, a successful demonstration of Amateur Radio was carried out today for the Deputy Minister of Communications and staff. Jim Smith, VK9NS, reports that A51MOC is now the official call sign of the Ministry of Communications.

PACIFIC TRIP POSTPONED. Masa, JE1DXC, has run into transportation problems. His trip that included stops at 3D2, T2 and T30 has been postponed with no rescheduling date mentioned.

ANTIGUA. Ratko, YU1NR, continues to be active as V29NR. Recent spots show most of his activity being on 17 meters. Try 18115 kHz at 1510 and 1700 to 1730z. Also check 24951 kHz around 1600z. QSL via YU1NR.

CENTRAL KIRIBATI. Ron, ZL1AMO, reports his T31RW trip has been moved back until around April or May 1995.

HAITI. Missionaries HH1D and HH1T are Darlene, KB8CTC, and husband Tim, KB8CTD. They operate between 14260 and 14350 kHz around 2200z and 7288 kHz at 1000z running a TS-450S from a solar charged battery system.

IRAQ. YI9CW has applied for authorization to operate on 30 meters.

THAILAND. DL2VK will be signing HS0/DL2VK for about 6 months. Most activity will be CW, though packet, AMTor, PacTOR and SSB may be used.

HEARD ISLAND. Tony, WA4JQS, plans ahead. He is working on obtaining permission to visit the island in 1997. Until then he and WA8JOC, WD8SDL and W9OEH continue work on refurbishing 3Y0PI antennas.

UNITED ARAB EMIRATES. Don, WB2DND, should be in Dubai from November 11 to 16 and operate A61AD. Most operations will be early mornings and late evenings with Don having to do so around his work schedule. Check 160 and 80 meters around 0200z. He has a sked with WA2UDV and N1QMM on 14240 kHz at 2100z and takes calls afterwards. QSL via WB2DND.

TONGA. Paul, KK6H, should be on the air as A35RK from November 24 to February 7. Most operating will be CW on 160 through 30 meters. QSL his home CBA w/SASE.

MARIANA ISLANDS. Listen for JA2NQG signing AH0F on CW until November 6. JA2NVY is also along operating both CW and SSB as AH2CW/KH0. JI2UAY signs KH2GV/KH0 on 29 MHz FM. QSL via their home calls.

THIS WEEKEND ON THE RADIO. 2100z Saturday will usher in the 61st annual ARRL November Sweepstakes CW contest, which runs to 0300z November 7. Work as many US and Canadian stations as possible exchanging the classic Sweepstakes exchange information of serial number, power class, call sign, check number and ARRL Section.

The HA QRP Contest, sponsored by the Hungarian ARS and Radiotechnika Magazine, runs through 2400z November 7, from 3500 to 3600 kHz CW only. Use 5 watts or less output power. Exchange call sign, signal report, QTH and name. Both call signs and full exchanges must be sent and received by both stations.

International Police Association Radio Club contest, sponsored by the US Section of the IPA, is from 1800z to 2200z November 5 for CW, and 1800z to 2200z November 6 for SSB. Exchange signal report and serial number. US IPARC members will add IPA after serial number.

The Ukrainian DX Contest, sponsored by the Ukrainian ARL and Ukrainian Contest Club, runs 1200z November 5 to 1200z November 6. In this SSB and CW event, exchange signal report and serial number. Ukrainian stations will send signal report and two letter region abbreviation.

Details on all of these operating events appear on pages 125 and 126 of October QST.

Thanks to Bob, WB2CJL, Gary, NI6T, Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Gary, K8BN, Don, WB2DND, Tedd, KB8NW, the Ohio/Penn DX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST. Thanks.

SYRIA. A eight member team will activate YK0A November 23 to 30. Omar, YK1AO, arranged issuance of the license and secured an operating site inside a Syrian PTT training facility on the outskirts of Damascus. The primary objective is to make YK available on CW, RTTY and the low bands. Secondary to that is to operate a two or three transmitter Multi/Multi in the CQWW CW Contest. Some SSB and WARC band operating is possible. QSL via W6OAT.

CHAGOS ISLANDS ON 160 METERS. VQ9SS and VQ9QM should soon be active again on this band. VQ9SS plans to be in both the CQWW CW Contest and the ARRL 160 Meter Contest.

TONGA. Paul, KK6H, will sign A35RK from November 24 to sometime early in February. He will operate mostly 160 through 30 meter CW. Plans are to be active in the ARRL 160 Meter contest and CQ World Wide DX CW on 160 meters. QSL via KK6H or the W6 bureau.

UAE. A61AD will be on 160 and 80 meters around 0200z from November 11 to 16. QSL via WB2DND.

ANTARCTICA. Nigel, VP8CMR, has been worked on 14260 kHz after 2230z. Plans are to be active on 17 meters from 1500 to 1900z. He will be at the base until February 1995. QSL to Nigel, Halley Base, BAS, Via Port Stanley, Falkland Islands.

TAIWAN. Tom, WB4IUX, has permission to sign BV/WB4IUX. He should be on the air in late November or early December, with plans to operate 80 and 40 meter CW almost exclusively. He may get on 20 meter SSB to spread the word that he is up and running, and to provide his operating schedule.

ZAMBIA. Ely, IN3VZE, will be active as 9J2CE until November 20. Listen for his SSB on 20 and 40 meters. QSL via IN3VZE.

MARIANA ISLANDS. A group will sign KH0AM during the CQ WW CW Contest. Some activity will take place before the contest on the

WARC bands and some RTTY. QSL via JE1CKA, Tack Kumagai, PO Box 22, Mitaka, Tokyo 181, Japan.

JAMAICA. Walter DJ6QT is now signing DJ6QT/6Y5 until December 1. Look for his print in the WAE RTTY contest using the call 6Y5X. QSL via his home call.

CARIBBEAN DXPEDITION. Dieter, DL3KDV, will be active from J6, J8 and J7 starting sometime this month. Listen for him in the CQWW CW contest. Dieter prefers QSL cards via the bureau.

VIRGIN ISLANDS. Listen for N9RJ/KP2, operated by N9RJ, N9KZJ, WB9CEP and W2CGI, from November 12 to 20. Plans are to be on 80, 40, 20, 17, 15, 10 and 6 meters. QSL via WB9CEP.

MARTINIQUE. F6AOI, F6BFH and F9IE will be on all bands with CW and SSB from November 11 to 27. They will sign FM/ their home calls.

ARUBA. Jeff, KR0Y, will sign P40F from Aruba November 21 to 29 including an effort in the CQWW CW Contest.

GIBRALTER. Dave, N7RK, will be active from ZB2 November 10 through 15 as N7RK/ZB2. He will be on 80, 40 and 20 meters, but may try 160 meters. QSL via CBA.

GAMBIA. C56/G0MRF is not listed in 1994 Callbook. Direct QSLing is via G8PDW, or bureau cards may go addressed to G0MRF.

THIS WEEKEND ON THE RADIO. Information on the European DX Contest, RTTY, appears on page 126 in July QST. Please note that W/VE stations are no longer required to send their state/province as part of the exchange.

OK/OM DX Contest, sponsored by the Czech Radio Club, runs from 1200z November 12 to 1200z November 13. Exchange signal report and serial number. OK/OL/OM stations will exchange a 3 letter district code. For details check page 126 in October QST.

The 1994 Japan International DX Phone Contest, sponsored by Five-Nine Magazine, is from 2300z November 11 to 2300z November 13. Exchange signal report and serial number starting with 001. Japanese stations will exchange signal report and two digit prefecture number.

ARLD070 DX news

ZCZC AE68
QST de W1AW
DX Bulletin 70 ARLD070
>From ARRL Headquarters
Newington CT November 17, 1994
To all radio amateurs

SB DX ARL ARLD070
ARLD070 DX news

The items is this week's bulletin are courtesy of Mike, K9AJ, Tedd, KB8NW, Steve, KU9C, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral column from the pages of QST magazine. Thanks.

VIETNAM. Rolf, SM5MX, reports new legislation on amateur radio is in the works and is expected to be passed sometime in 1995. He has been issued the call sign XV7SW and granted permission to operate on fixed frequencies only. They are 3505, 7033, 14016, 14021, 21016, 21019, 28016 and 28019 kHz. His mailing address is Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, VEITNAM.

SEYCHELLES. A group of JA operators will be active from November 22 to 25. The calls S79CC, S79SS, S79TR and S79XE will be used. They will be on 160 through 10 meters and OSCAR 13. Modes will include CW, SSB and RTTY. On 160, check 1824 and 1910 kHz. On OSCAR 13 check 145.885 MHz. QSL via JI1NJC.

BOTSWANA. Dave, A22MN, is on 160 meters starting at 0300z around 1827 kHz. As propagation permits he moves to 3511 kHz, and then sometimes to 40 meters. He will be on during the CW weekend of the ARRL DX contest. Dave leaves Botswana in March 1995.

EAST MALAYSIA. Saty, JE1JKL, will sign 9M6NA for the CQWW CW contest on 20 meters. QSL via JE1JKL.

MADEIRA ISLANDS. DL5EBE, DL2HYH, HB9CRV and a few others will be on from November 25 to December 1. The CQWW CW contest is on their To Do list. Listen for CR3U by DL2HYH on 15 meters, CR3X by DL5EBE on 40 meters and CT3FN by HB9CRV on 80 meters. The DL ops will be signing CT3/ their home calls before and after the contest. QSL via home CBAs.

NEW CALEDONIA. Serge, F6AUS, will be active as FK/F6AUS from November 17 to December 8 on all bands, CW and SSB.

GLORIOSO ISLAND. Jacques, FR5ZU, will sign FR5ZU/G from November 17 to December 8. Asians QSL via JA8FCG. Americans and Europeans QSL via VE2NW.

EASTERN KIRIBATI. A group of JA operators will be active from here December 27 to January 2. Activity will be on 160 through 6 meters with CW, SSB and RTTY. There is a chance for some satellite operations. Jack, KD4ND, will be traveling to Christmas Island on December 3 for a 10 day bonefishing expedition. He has applied for a license and if it comes through, he will try to get on all bands, mostly on SSB. Some CW is possible.

SAINT KITTS AND NEVIS ISLAND. From November 17 to 27, John, WZ8D, and Joe, WB8GEX, will operate on 160 through 6 meters with CW and SSB as V476WZ and V47NF. A meter beacon, donated by WA8R, will be on 50055.5 kHz pumping 3.5 watts to a dipole at 1580 feet ASL. The beacon call will be V44K.

HONG KONG. Dave, WX3N, will return to VS6WO November 22. He plans to operate 80 and 160 meters daily starting at 1030z. On 80 meters try 3501, 3507 or 3513 kHz. He will simultaneously operate on 160 meters on either 1824 or 1833 kHz. During the CQWW contest he will operate VS6WO single op. Outside of the contest listen for him as VR2/WX3N.

GIBRALTAR. Jorma, OH2KI, and Peter, K8UNP, will both be active in the CQWW CW contest. Jorma will operate single band on 80 meter CW as ZB2X. QSL via OH2KI. Peter will operate single op as either ZB2/K8UNP or K8UNP/ZB2 on 20, 15 or 10 meters.

ANGUILLA. ND3F, WR3Z and ND3A, members of the Potomac Valley Radio Club, will be operating as a multi/multi entry during the CQWW CW contest. They will sign VP2EZA. Before and after the contest they will be on 160 through 10 meters with CW and SSB signing VP2E/ their home calls. QSL VP2EZA via ND3A. QSL all other calls via the respective operator's home CBA.

TURKS AND CAICOS ISLANDS. K8MFO, WD8AUB, W9VNE, W6RGG, WA4DRU, WT8N, W0CG, and WD8LLD will be active in the CQWW CW contest as a multi/multi entry as VP5VW. Operations will be from the QTH of Jody, VP5JM. Outside the contest, each operator will sign VP5/ his home call. They may be active as early as November 20. QSL VP5VW via W8TPS. QSL all other calls via the respective operator's home CBA.

BARBADOS. Steve, KU9C, and Ralph, K2PF, will be here on vacation December 8 through 12. They plan to be in on the ARRL 10 Meter contest as 8P9GD and 8P9GE, respectively. Plans are to concentrate on Pacific openings on 20 meter CW. Try around 14005 kHz between 2000 and 2400z. QSL via their home calls.

THIS WEEKEND ON THE RADIO. The 61st ARRL November Sweepstakes is this weekend from 2100z November 19 to 0300z November 21. This will be the phone weekend of the contest. See page 125 in October QST for full contest rules.

ARLD071 DX news

The items in this week's bulletin are courtesy of Rudi, DK7PE, Rob, ND3A, Jacques, W2/F2YS, Tedd, KB8NW, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

VIETNAM. Rolf, SM5MX, aka 4S7MX and 5Z4MX, is active from Hanoi signing XV7SW. Listen for his fixed frequency CW on 3505, 7033, 14016, 14021, 21019 and 28016 kHz. QSL via Rolf T. Salme, Embassy of Sweden, Box 9, Hanoi, Vietnam. Rolf is making plans to be active in the CQWW CW Contest on 3505 kHz.

NEPAL. Willi, OE7KWT, is signing 9N1WT using the station of 9N1KY. He uses 21270 and 14270 kHz around 0800z but has been on the 14226 DX net around 1145z. QSL via OE7KWT.

SAUDI ARABIA. Ops Terry, N4KT, Bengt, SM0CCE, and Thomas, SM0CXU, will operate HZ1AB in the CQWW CW Contest.

TUNISIA. JH2CFD, JF2EZA, JR2RVL and JL2OYI are instructing Tunisians on amateur radio operations and plan to set up a club station. Equipment will include a monobander on 15 meters, a tribander, dipoles for the low bands and barefoot transceiver. The club call sign is 3V8BB. Try 14025 and 14195 kHz around 0700z. QSL via JF2EZA.

GLORIOSO. Jacques, FR5ZU/G, will be going home on December 1. It was reported earlier that the departure date was December 8. Listen for him on SSB daily on 28480 kHz at 1500z or 21256 kHz at 1600z. QSL via VE2NW. Henri, FR5ZQ, who is also on the island at this time, will take over for Jacques and is expected to be active through the end of the year. QSL via CBA.

JERSEY. Rich, K2WR, will be active from the Channel Islands for the CQWW CW Contest. Listen for GJ/K2WR or GJ0/K2WR on 160, 80 and 40

meters. QSL via K2WR. Cards for his May 1994 40 meter WPX jaunt as GH3DVC should go via GJ3DVC.

DOMINICA. Former W1AW DX Bulletin author Paul, K1XM, is heading up a Multi/Multi operation for the CQWW CW Contest. The operator list includes Charlotte, KQ1F, John, K4BAI, Walt, AC1O, Bill, G4WJS, and Bruce, G4WVX. Listen for the call J77J.

ANGUILLA. Barry, WR3Z, and Rob, ND3A, will be at the QTH of VP2EHF and VP2EE November 21 through 29. Barry and Rob will be in the CQWW CW contest as VP2EZA. Outside of contest hours, listen for VP2/WR3Z and VP2E/ND3A on SSB and CW, 160 through 10 meters, with some novice band operations as well. QSL contest QSOs with VP2EZA via ND3A. QSL other contacts via home call signs.

MARTINIQUE. F6AOI, F6BFH and F9IE, who were recently active from J8, will operate from Martinique as TO0P until November 27. They will be on 40 through 10 meters with CW and SSB. QSL via F6BFH.

KERMADEC ISLAND. Barry, G4MFW, aka ZS1FJ, has obtained a license and plans to operate for two weeks starting sometime in March. Arrangements for a stateside QSL Manager are being made.

TAIWAN. Tom, WB4IUX, received approval for his trip and has a firm schedule. He plans to arrive on November 28 and operate for 4 days starting on the 29th. Try at east coast sunrise from 3508 to 3512, as well as 7008 to 7012 kHz.

GOLIST NEWS. Jay and Jan O'Brien of the ''The W6GO/K6HHD QSL Manager List'' have decided to retire after many years of dedicated service to DXers. Paul and Nancy Smith, N4FFO and KB4RGW, will be taking over the QSL Manager List, aka The GOLIST, so the SHOW/QSL and SHOW/GO functions on PacketCluster will remain intact.

PIRATE'S COVE. Rudi, DK7PE, phoned the DXCC Desk on November 22. claiming that stations ST0CW and SU2CW that were on the air November 11 and 12 were pirates. They gave DK7PE as their QSL manager.

THIS WEEKEND ON THE RADIO. The choices for operating events this weekend couldn't be much more different. Rules for the ARRL International EME Competition appear on page 128 of September QST, and info on the CQ World Wide CW DX Contest appears in the same issue, but on page 126.

ARLD072 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Steve, KU9C, the OPDX Bulletin, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

UNITED ARAB EMIRATES. The PTT has approved three more licensees, all graduates of a recent training session at Dubai Men's Technical College. Listen for newcomers A61AH, A61AI and A61AN.

ANTARCTICA. Eddie, VK4EET, is operating as VI0ANT and is expected to be stationed there through March. Listen for him between 1130 to 1630z, primarily on CW, though he does operate some SSB. RTTY and AMTOR contacts are available on request. Try 3502, 7005, 14005 and 21005 kHz for CW, and 3798, 7070, 14190 and 21295 kHz for SSB. QSL via VK4EET. Others are also active. Phil, VK4FPS, is on as VK0FPS with SSB and digital modes. QSL via VK3MA. Lances, VK7ERZ, is on as VK0ERZ with casual SSB ragchews.

CHATHAM ISLAND. Listen for the CW of Ron, ZL1AMO, between December 10 and 20. Though primarily a CW op, he will also operate some SSB and RTTY.

MALDIVES ISLAND. Tom, DL7UTM, aka H44XO, 3D2XO, T21XO and Y31XO, will be signing 8Q7XO between Christmas and year end.

MALTA. Birgit, DL7VTZ, and Holgert, DL7VTM, who were 9I2M and 9I2Z earlier this year, are planning to operate from Malta for two weeks sometime in March 1995.

BARBADOS. Marian, KB9EKO, and Myron, K9JJR, should be on the air soon and be active through December 12. Listen for 8P9CT and 8P9DC. Steve, KU9C, and Ralph, K2PF, will be signing 8P9GD and 8P9GE, respectively, while vacationing December 8 through 12. They also plan to be active in the ARRL 10 Meter Contest. QSL via their home calls.

THIS WEEKEND ON THE RADIO. The ARRL 160 Meter Contest will warm up The Top Band this weekend. It runs from 2200z December 2 until 1600z December 4. W/VE stations send signal report and ARRL/RAC Section for the exchange. DX stations send signal report. If maritime or aeronautical mobile, sent ITU Region. For full contest rules, see page 131 of November QST.

TOPS is an international club founded in Great Britain for CW enthusiasts. The TOPS Activity Contest on 3.5 MHz CW is from 1800z December 3 to 1800z December 4. Limit operating to the 3510 to 3560 kHz segment. Listen for stations calling CQ TAC or CQ QMF.

Exchange signal report and serial number. TOPS members will also
give their membership numbers. Logs go to OE1TKW and are due
January 31, 1995. For more information on TOPS contact G3AWR.

ARLD073 DXAC vote results

DXAC Vote Results

The ARRL DX Advisory Committee, DXAC, has voted 14 to 2 against a
petition to add the Austral Islands and the Marquesas Islands to the
DXCC Countries List. Those voting against shared the feeling that
French Polynesia is not a Point 1 DXCC country, and for that reason
these two island groups do not qualify as separate countries under
the current DXCC rules.

The DXAC voted 13 to 1 against adding the Balleny Islands to the
DXCC Countries List. Most of those voting against this proposal
felt that the Balleny Islands are a part of Antarctica.

Finally, the DXAC voted 14 to 2 against recommending establishment
of a DXCC award for contacts made while operating mobile. Many
comments stated the impossibility of verifying that contacts were
indeed made while operating mobile. It was also noted that all DXCC
awards today are based on either mode or band.

ARLD075 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, the OPDX Bulletin, Rolf, DL7VEE, the DX News Letter, DJ8WL, Mike, OM2DX, and the 160M Bulletin. Thanks.

TUNISIA. Club station 3V8BB continues to be active and has recently added 160 meter capability. QSL via JF2EZA. No documentation for this operation has been received by the DXCC Desk.

KUWAIT. 9K2MU, with pile up assistance by DJ9LJ, has been working 3792 kHz around 0100z. QSL via WA4JTK.

MINAMI TORISHIMA. Ishi, JI7BCD, has been busy as JI7BCD/JD1. Check 7010 kHz at 1030z and 2345z. JD1BIE has also been spotted on 40 meter CW.

RWANDA. Alex, PA3DZN, who is active as 9X5EE on 40 through 10 meters, plans to be up and running on both 160 and 80 soon.

ALAND ISLAND. Pete, N0AFW, will visit Finland from mid-December to mid-January. Plans are to operate for a few days as OH0/N0AFW near the end of his stay. Pete prefers the lower bands and WARC bands.

MARKET REEF. Transportation and weather permitting, Pete may be able to get on as OJ0/N0AFW for a few days, probably between January 10 and 15.

CAYMAN ISLANDS. JH1ROJ will be on Grand Cayman Island from December 29 to January 5. Listen for the call sign ZF2RO on 80 through 10 meters with SSB and CW. QSL via JH1ROJ.

SOUTH SHETLANDS. Henry, SP3FYM, should be on the air in mid December, probably with the call sign HF0POL. His assignment should last through the end of 1995. Henry prefers RTTY and 160 meters. Rhombic antennas should provide many 160 meter operators with South Shetlands. DJ8WL reports Henry made nearly 25,000 QSOs during his 1990/1991 stay. SP2JYV may be active from King George base sometime in December. Listen for him on all bands with CW, SSB and RTTY.

FALKLAND ISLANDS. Dave, VP8BKT, has been very active. Try 14184 kHz between 0000 and 0300z, 18153 kHz at 1830z, and on 21290 kHz starting at about 1700z. VP8CMP has been on 21290 kHz between 1300 and 1500z.

ANTARCTICA. Gavin, VP8GAV, is now at Fossil Bluff, a British base. He has had a good signal on 14024 kHz after 2300z. QSL via GM0LVI. Eddie, VI0ANT, has been active on RTTY from one of the Australian bases. Try 14083 kHz between the time slots of 0100 and 0200z, and 1300 and 1500z. If weather permits, Eddie will be sporting some sort of Yagi. QSL via VK4EET, Eddie DeYoung, 131 Plantain Road, Shailer Park Q 4128, Australia.

PALESTINE. A very weak signal from a station signing ZC6B was heard on 14243 kHz at 1430z, Sunday, December 11. OE6EEG, who was on frequency maintaining the list, stated he would run the list operation for ZC6B every Saturday and Sunday. The DXCC Desk

emphasizes that ZC6 was deleted from the DXCC Countries List as of July 1, 1968, and that the ZC6 prefix is currently assigned by the ITU to the United Kingdom. The DX News Letter of December 6 states that ZC6B was a joint venture DXpedition from the Ghaza Strip by Israeli and Jordan amateurs.

SB DX ARL ARLD076
ARLD076 DX news

The items in this week's bulletin are courtesy of Tedd, KB8NW, Jim, AD1C, Tomo, JH2PDS/1, Bob, W4VQ, Chod, VP2ML, The DX Bulletin, Bob, W5KNE, QRZ DX, Joe, NJ1Q, and the Tokyo, Japan, PacketCluster network. Thanks.

SPRATLY. K5OVC reports that Robin, DU9RG, is planning to operate as DU0K sometime in April. According to the DXCC Desk, the Philippines are one of several countries with territorial claims in the Spratly group. Any operation from the Spratlys should use the call sign of the occupying authority.

NEPAL and BANGLADESH. Members of the Japan UNICEF Ham Club plan to be on the air through year end starting December 24. From January 1 to 7 they will move to Bangladesh and operate from there. CW, SSB and RTTY will be their modes.

QATAR. Tom, DL9FCQ, hopes to be active January 14 to 27. He favors CW during his evening hours on 40 through 10 meters. QSL via CBA.

PHILIPPINES. Tom, SM0CNS, is signing SM0CNS/DU7 on 80 through 10 meter CW from Cebu Island. He will operate SSB or RTTY on request. Tom hopes to be on 160 meters soon. QSL via the DU QSL bureau or direct to Thomas Bevenheim, Ronda, CEBU 6034, Philippines.

ANTARCTICA. Eddie, VI0ANT, works his radio around his work schedule, but is usually QRV from 0030 to 0300z and again from 1230 to 1700z. Though RTTY equipped, Eddie prefers CW on the low end of 20 meters. He hears NA stations on 40 meters around 1400z but reports getting few answers to his calls. Try the long path heading between 0030 and 0300z. QSL via VK4BMD.

KERGUELEN ISLAND. Pierre, FT5XJ, aka F5NLL, was heard on a DX net December 18. Check 14226 kHz at 1415z.

SOLOMON ISLANDS. Norbert, DJ9RB, and Bernhard, DL2GAC, will be on the air during the second half of January. Action will be on CW, SSB and PacTOR, with special emphasis on the low bands. QSL via their home calls.

TURKS AND CAICOS ISLANDS. Joe, WB8GEX, will sign his call /VP5 from December 26 through year end. He will operate SSB on 160 through 10 meters. QSL via WB8GEX with SASE. Remember that new postage rates go into effect January 1.

EASTERN KIRIBATI. Only three of the original five operators will be active from Christmas Island for the DXpedition slated for December 27 to January 2. Listen for T32J by JR5JAQ, T32A by JA5EXW, and T32X by JA4GXS. For CW try 1806 and 1910, 3506, 7006, 10106, 14006, 18074, 21006, 24896, 28006 and 50110 kHz. SSB will be around 3799, 7070, 14190, 18120, 21290, 24940, 28490 and 50110 kHz. Last but not least, for RTTY check 7035, 14086, 21086, and 28086 kHz. QSL via their home calls.

TUNISIA. Tomo, JH2PDS/1, reports that Karl, DK2WV, will probably not be able to operate as 3V8W this year.

SOUTH GEORGIA. Al, WA3YVN, reports that the SGI trip is a go for January 4 to 19. Before departure to SGI, listen for Al, Jan, WA4VQD, and Vince, K5VT, to be on the air from the Falklands.

EASTER AND SALA Y GOMEZ ISLANDS. Bob, KK6EK, and Carlos, NP4IW, are planning a serious DXpedition to these islands for sometime in August and September of 1995. Permits have been obtained. The calls will be XR0Y for Easter Island and XR0Z for Sala y Gomez Island. The team will probably consist of 24 operators, with some big-time calls in DX and contesting being mentioned. They include KK6EK, NP4IW/6, KA3MUF, KD8IR, W6MKB, ON6TT, WJ2O, AB7BB, K9SJC, AA6KX, K1OCS, K1XM, KQ1F, WA5DAN, KD6ISY, and AA6TT.

QSL ROUTE CORRECTION. Wayne, WB6EQX, reports that he is receiving cards for 9K2MU. The correct QSL Manager for 9K2MU is WA4JTK.

SB DX ARL ARLD077
ARLD077 DX news

The items in this week's bulletin are courtesy of Bob, W5KNE, QRZ DX, Chod, VP2ML, The DX Bulletin, Japan DX News, Edward, W9SI/OA4SS, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks.

ANTARCTICA DXPEDITION. The VP8SGP operation is still a go. Departure from the Falkland Islands will be on December 31 with arrival on South Georgia Island expected to be January 4.

NEPAL AND BANGLADESH. Japan UNICEF Ham Club members were supposed to have been on the air from Nepal by now. There have been no PacketCluster spots for them on our local Connecticut node. Plans were for this group to move on to Bangladesh and operate from there during the first week of the new year. Keep an eye on the PacketCluster network.

PACIFIC DXPEDITION. Masa, JE1DXC, has worked around earlier flight reservation problems and his island hopping trip is now back on. Operations will be on 80 through 10 meters with CW, RTTY and SSB. January 19 and 20 he will operate as 3D2XC from Vanua Levu, IOTA OC-016. From January 21 to 26 he will sign T30XC from the Gilbert Islands, IOTA OC-017. Listen for T20XC on Tuvalu, IOTA 0C-015, from January 27 to February 2. February 3, 4 and 5 he will be back at Vanua Levu. QSL via JE1DXC.

VATICAN. Edward, W9SI/OA4SS, will be returning to Vatican City to work as an interpreter. His stay should be from early January through March 25. Though his work schedule will limit on the air activities, there will be some operating windows. They are Monday through Friday from 1400 to 1530 and 1930 to 2300z, Saturdays from 1400 to 1830 and 1930 to 2230z, and Sundays from 0800 to 1130, 1430 to 1830 and 1930 to 2230z. He also reports that the installation of a satellite array is slated for January or February. QSL via I0DUD. Edward maintains schedules Monday through Friday with KD8WS on either 21435 kHz at 1740z or the IMRA Net on 14280 kHz.

EGYPT. Said, SU1SK, reports that IK8AUC is not QSL Manager for his station. Said has no QSL manager. QSL SU1SK via PO Box 62, Shobra Alkima, 13411 Cairo, Egypt.

SAINT LUCIA. W9KDX, KS9W, K9BG, N9JCL and WA9AKT will be on the island January 7 through 13. They will be on 80 through 10 meters with CW, SSB and RTTY. They also plan to operate in the ARRL RTTY Roundup on the 7th and 8th. Call signs are to be issued upon their arrival. QSL via N9NCX.

CAYMAN ISLANDS. Isao, JH1ROJ, should be on the air as ZF2RO from December 29 to January 5. Listen on 75 through 10 meters for his CW and SSB. QSL his home call.

BARBADOS. Chris, G3VBL, is active as 8P9EM until January 12. He favors CW on the WARC bands. QSL via G3VBL.

THIS WEEKEND ON THE RADIO. The ARRL Straight Key Night is actually a 24 hour operating event starting at 7 PM EST December 31. In this low pressure event make friends on CW using a straight key. When giving signal reports, use SKN instead of RST so as to attract others to participate. More information appears on page 132 of November QST.

>concerns about "promoting life-long learning" could be satisfied with
>a one-time all-priveleges entry exam. A PROPERLY designed incentive
>system seems more likely to do the trick.

For an incentive system to have any meaning in the context of lifelong learning, the series of tests and incentives would have to be of lifelong scope, IE a test a day granting an extra kilohertz a day for life. That's obviously ridiculous. Certainly a 5 test system isn't going to address that issue. Worse, hams seem to take the "incentive" exams as graduation exercises, an end to test taking and learning, after those first few months of memorizing answers and practicing rote mechanical skills to wade through the set. I'm suggesting an exam that is clearly an *entrance* exam to a lifelong education process whose only graduation certificate is signed by the coroner.

Lifelong self training by its nature has to be self directed and self motivated. No test, or limited finite number of tests, can do that for the amateur. He has to do that from within. Some will, some won't, that's the nature of humans. All we can realistically do is make sure those about to begin the process have the rudimentary skills needed to pursue the course of learning they're about to embark upon. That only requires one test. But that test needs to be of a different scope, emphasis, and extent than any of the current tests, or of all the current tests taken together for that matter. Not *harder* necessarily, but *different*. It's important that the test be open book because that fosters a sense of "hey, I can find out the answers to questions myself" in the applicant that will be of lifelong use.

Gary

>ago, but I don't recall ever reading what those three names actually were.
>
>--
> ==----= Steve MacGregor
> ([.] [.]) Phoenix, AZ

theory 1: HAM -> Hertz, Armstrong, Marconi (?)
theory 2: HAM -> First letter of the last name of 3 pioneers who
started this hobby. (I knew the names but do not
remember them now, probably I have them written
down somewhere)
theory 3: HAM -> Probably in some language (?) the word amateur
is pronounced as hamateur and ham is an abbreviation
of hamateur.
theory 4: HAM -> Anybody adding on to this ?

A while back I wrote an article which exposes
the design flaw of almost all surge protectors
on the market.

If you'd like a copy of the article emailed to you,
just email me and type in the word "surge."

ghetto n. 1. an area of a city where ethnic or religious minorities
are gathered (voluntarily or involuntarily) separate from others of
a different ethnic or religious bent. (see segregation) 2. Figurative:
"West Point is the beautiful ghetto. Everyone is healthy there, and
if they are not healthy they are discharged." (Atlantic)

I was using ghetto in the spirit of the figurative usage, as a place
where those of like kind are gathered, separated from contact with others
different from themselves.

Ah, let's ask the dictionary.

ham n. 1. the upper hind leg of a hog, usually smoked or salted
...{variations on hind legs}
5. slang (a) bad actor or (b) overacted

ham-handed adj. clumsy, inept

Ham n. second son of Noah, father of the African races (Bible)

HAM acronym for Home Amateur Mechanic magazine, a turn of the century magazine featuring home radio projects. "What kind of radio is that? It's one of those HAM radios."

Which one do you like?

: there was any accident in jacking the car.

Perhaps the magic powder was graphite - like graphite powder for
lubricating locks? It's conductive and would have a tendency to
coat the inside of your tire. The trick is getting it inside the
tire. You could jack up the desired tire, let all the air out,
and unscrew the valve core inside the stem (bike shops sell a little
tool that does this). This leaves you about a 3/16" hole thru
which you could dump some graphite directly into the tire. How much?
I dunno - but probably not enough to let it bunch up and throw the tire
off balance. Presumably, coating the inside of the tire with graphite
would help it ground out any static? Same idea used to coat CRT's
to ground them. I wonder if a little water would work instead?

Good luck.

The names of the three pioneers are Albert S. Hyman, Bob Almy, and Peggie Murray. They called their station Hyman-Almy-Murray, and some people claim that the call later became HAM. It is described in "Why An Amateur Radio Operator Is Called A 'HAM'" in The Amateur Radio Communicator, March/April 1994 issue, page 19. The article is about half a page. If many people are interested in the article, I will post it here. By the way, these three were members of the Harvard Wireless Club.

I read an article a while back, in "Radio Fun" I believe it was, that told the story of the origin of the term HAM. The original amateur broadcasting station was located in Boston, I believe, and it was run by three individuals whose names were H something, A something and M something. When the predecessor of the FCC came along and initiated the concept of identification by callsigns, the station first used the first 2 letters of each of the three owners names. It was later shortened to HAM, and the name stuck to become synonymous with amateur radio.

Its interesting, but I have observed that a significant number of people I meet do not know what amateur radio is, but they _do_ know what HAM radio is and often nod sagely in awe and wonderment when they find out that I am a HAM radio operator. Maybe its because they thought I was so stupid that... uh, hey wait a minute!!!

I remember reading here about the suggestion of an on-line repeater
directory. Did anything ever happen with this?

I would be satisfied with a text file dump of the ARRL repeater
directory that I could do searchs on using grep or any text manipulator.

How about

Hertz-Ampere-Marconi ???

But that would make it HAM not ham. OOPS!!

And for those who don't know about Marconi...

Aditya

I'm looking for software that will allow me to control my Icom radios
from my PC. FTP shareware or vendor info appreciated, software that
doesn't require windows desired. I have the RS-232-Radio interface.
I've tried a few radio BBS's, and none of them have what I want.

Post it for everybody,
galen, KF0YJ

At one time, it was thought to be the call sign of (then boy wonder)
David Sarnoff who was one of the first shore stations to hear
of the Titanic disaster. This rumor has since been refuted.

: I vaguely remember some magic conductive powder from the BOD which was to be
: blown into tires to cure this type of noise. DOES IT STILL EXIST? ANY OTHER
: SUGGESTIONS? I watched while the tires were changed, so don't think that
: there was any accident in jacking the car.

Actually, a lot of newer tires are being made with much less carbon-black
in them than in the old days. As a result, you start getting effects
like you've noticed, as well as static shocks when you leave the car.
My solution was to exchange the pirelli tires I had for some Goodyear
Eagles. Both the shocks and interference went away. :-)

Greetings! I just received an MFJ-1278 multimode TNC and use it for sstv and fax work as well as the usual packet-esque stuff. I do not however have any software to run it. The MFJ Multicom package for the amiga only handles b/w sstv and I think color is a necessity. If anyone out there knows of any decent amiga software to run the thing for SSTV and fax, I'd appreciate the information (or the software if you're selling). I'm currently running WB 1.3 but will upgrade to 2.1 if someone will sell me a rom at a reasonable rate.

On a recent flight (Alaska Airlines) they made a point to tell everyone to turn off and put away all "personal electronic devices, such as laptop computers, game boys, and walkman-type "things" (I forget the word they used) whenever the plane was below 10,000 ft. They also told us when it was OK to use such things.

They didn't say whether the walkman-type things were tape players or radios, and I was curious whether my HT (rx only, of course) could be considered a "personal electronic device". I never got a chance to ask.

Anybody know?

Hello Cleve

Interesting question this. I don't know if much of my European perspective will be all that relevant to you on the other side of the pond. But here goes anyway. I'm currently on just two bands running SSB/CW, 50MHz and 1296MHz- but I was always wierd as a kid!

Six is a kind of mix between ten metres and two metres. During the height of the sunspot cycle it behaves like a Hf band and DX QSOs are possible right round the globe using quite simple equipment. It takes dedication to get DXCC on six, although since Europe came on stream, not as much as it used t. With my little station (homemade 3 element yagi and never more than 100Watts (often just 10W) I'm on about a half DXCC. There's a terrific high about working inter-continental DX on six.

But of course we're going to have to wait a few more years before all that great propogation returns. In the meantime six behaves somewhat like other VHF bands. Here in Europe we're lucky enough to have a large number of countries within single hop Sporadic E distance. During the summer (especially f course June) six opens almost daily within Europe with S9+++ signals. Similarly meteor-scatter is very easy on six. I used to use a lot of MS on 144MHz and six is much much easier.

Tropo openings are much rarer than on the higher VHF bands.

So I'd say you have to have a mix of HF and VHF operating skills to get the best from six. Why not start off cheaply and simply until you decide if you like the band. I made my 3 element for under 20 dollars (3 element NBS) and the boom length is only about six feet. I transvert from my Yaesu two mere SSB rig and have a small homebrew transistor linear amplifier. If you like what you find you can always spend a lot more dollars to get a state-of-the-art station.

The new tires don't conduct as well as the old ones. The BOD solution
was to place a spring inside the grease cup to short the wheel to the
bearing shaft. You might try some graphite powder in the wheel
bearing grease. Check with the dealer for your particular car.

I think perhaps we should get away from calling ourselves "amateur" as
well. It implies we're some kind of inexperienced beginners. Private
pilots don't call themselves "amateur" pilots, so why should we?
Perhaps "private radio operator" isn't a good term, but we can think
of something better than "amateur" or "ham".

The calls with "X" as the initial letter of the suffix are assigned to eXperimental stations, thus are not available to the Amateur service.

That additional list of suffixes has been mostly banned since Moby Dick was a minnow, and has nothing to do with any current "politically correct" environment in Washington. While it may seem like a silly list to you, many of those suffixes form words or homonyms which would be patently offensive to some folks. To take one of the "milder" examples, suppose a young lady who was sensitive about her weight got the call "KC0PIG". I can imagine her Amateur career would end before the mailbox was closed.

Source record: 253988

MI>I'm starting to learn morse code and would like to know if there are any
>preferences when it comes to learning methods? I like the idea of
>computer software and would like to know what you feel is the best or
>better of the types available.

When I teach classes, I use the following groupings of letters to be
learned by my students:

ETOANIS
RHDUCLM
PFWYGB
JKQXZV
12345
67890 __ __ __
,.?/ AR SK BT

I encourage students to stay with a set until they can copy it with 95%
accuracy every time and THEN to go to the next set. This takes an
average of one week per set IF they study twice a day for 20-30 minutes
each session.

There's no point in speeding through the sets if you don't learn them
thoroughly.. and it's a LOT more difficult to come back and try to
re-learn them the 2nd time.

Computer programs work decently. But once you have your license GET ON
THE AIR and USE your abilities to get your proficiency up to the next
level.. on-the-air operation will substantially speed up your progress.

We need an FAQ file big enough to hold all the answers to this question.

It has been reliably established by a Real Historian that in 19th century wire telegraph practice, poorly-skilled operators were called "hams" or "plugs", and the for-profit schools where they learned telegraphy were called "ham factories" or "plug factories". He didn't say whether "ham" was derived from "ham-fisted" or from some other source; but certainly the term was in common use before there was radio.

Now any of these theories about how amateur radio came to be called "ham" are up for grabs; but it seems highly plausible that early professional radiotelegraph operators came from the ranks of wire telegraphers and would refer to amateur operators as "hams".

Yes, they mean your HT.
If you listen carefully, and/or read the info in the in-flight magazine,
you will also find a list of items prohibited at all times (even above
10,000 feet) - this will include your HT.

Its in the same class as a cellular phone - must be left off at all times.
(even on rx only).

Philip

Yes, that's right. X cannot be the first letter of the suffix for
2x3s, since these are allocated to the Expertimental Service. For
example, you won't find KA#X$$ issued to any amateur. In addition,
the 1x1 callsigns cannot have X as a suffix (e.g., K1X), but the rest
are allocated to the Amateur service, believe it or not (X-suffixed
1x1s don't seem to be assigned to any service). Every other format
can have an X suffix. So don't worry, you're legal!

This Sunday, 1/8/95, at 6:00pm EST, Will Anderson, AA6DD, will be the special guest. Will is President of one of the largest 6 meter clubs in the country. He will discuss the history of 6 meters, its ups and downs, all the modes available, and what's happening today. So be sure to tune in and listen, or give a call and ask Will a question on the Ham Radio & More Show on the Talk America Network. It's also available live on satellite on Spacenet 3, Transponder 9, 6.8 audio. If you want to call in to the show, use the caller line at 1-800-298-talk. For more info call 241-1510, or try our home page courtesy of the Boston ARC at:

Amen. Can one ask for another callsign if they dislike theirs enough to be embarrased about it? My wife got KD6BUN.

:
got my Novice in 1962...one year, non-renewable, CW only, crystal
: control only. Far from being a "ghetto", I, and I imagine many
: others, considered this a fantastic WONDERLAND!

: Greg
I gotta tell ya Greg, I agree 100% with you. When I started as a novice
back in 1960, there was no no-code . I had a blast running 5 watts CW
and working the world. I'd hear guys on phone running 2000 watts screaming
for a 'new country' and I'd work the same DX on CW with 5 watts and no
mass pileups. Learning CW isn't a penalty by a long shot. It opens you
up to a fun way to work the world on a minimum budget and laugh at the
power hogs on SSB.

It only takes a few weeks to learn and thats it. Guys, it's not that hard.
Learning Chinese, that's hard. Give it a try. You just might like it.

John K3NXU

: active, focused, and enjoy ham radio like I used to.

Six meters offers the full aray of operation from CW to repeater
operation. Here in New Jersey I can bring up at least six or more
repeaters from home with a simple J-Pole coax antenna and 50 watts
(Kenwood TS-690). The band can be jumping at times but is usually very
quite...but when it does open you get some great contacts without
needing big power. Running a beam with a decent all mode transceiver
is certainly recommended.

The VHF contest weekends are the best opportunity to gain several
new states and/or grids.

One thing to stay aware of is TVI complaints because of 6 meters
being immediately adjacent to the beginning of the TV channels but
if you have enough distance between you and the neighbors that
shouldn't be a problem.

From: wa2ise@netcom.com
Message-ID: <wa2iseD1x0H0.99C@netcom.com>
Source record: 254013

NTSC TVs and VCR should work fine on 50Hz, the vertical scan is controlled by the TV signal's sync signal, not the powerline. NTSC vertical rate isn't exactly 60Hz, it's at 59.94Hz.

I remember back around 1970 when the Novice license was good for 2 years non-renewable, code only. And you were not allowed for some strange reason, to hold a novice and a tech at the same time. Code didn't interest me, VHF did. Back then any General and above could give noivce and tech tests. One guy in northern NJ, field engineer or something with the FCC, didn't want me to get the tech license, he felt that *real* hams only do HF or something like that. He did the 5wpm test with a keyer set to send the letters at around 20WPM, spaced to 5wpm. I choked on that.

Equipment then was all vacuum tube stuff, brands like Johnson, Viking, Hallicrafters, and surplus ex-commercial two way radio stuff.

Got my license in 1976, went to the FCC office in NYC to take the test in an ancient olive green painted "classroom". CW test was to copy perfectly for one minute out of 5 random 5 letter words. Theory test was the general test. The fcc stoped letting generals give novice and tech tests, and this was before VE's.

Recieved my callsign WA2ISE when I was at college, did my first contact in CW, ever since used voice and later packet only. Back then the FCC recycled callsigns, someone had mine before.

Source record: 253890

In article <1995Jan4.153325.11622@ke4zv.atl.ga.us>, gary@ke4zv.atl.ga.us (Gary Coffman) writes...
>What Kevin appears to be lamenting is that too many amateurs treat the
>service, and their participation in it, as "just a hobby" instead of as
>a voluntary enterprise intended to advance the public and national interest
>as outlined in the charter of the amateur radio service in Part 97.1.

You know, if the only aspect of amateur radio that is considered "for the public good" is that which the public can see directly, i.e. emergency operations, then we might as well turn over our bandwidth for auction.

IMO, the main benefits of amateur radio are not from the occasional hurricane net, but from the education in an otherwise esoteric trade that all amateurs get in order to pass the license test and get a station on the air. Experimentation can take place in the ham bands, unlike the crowded commercial and gov't bands. How many RF engineers cut their teeth on amateur communications, and how many use experimentation in the ham bands to push their skills in the for-profit bands? Even the tech-lites can set up a station, check it for proper operation, and know where to get more info. if they run into problems like TVI. Joe Cop probably couldn't tell a PL-259 from a BNC, but I bet most tech-lites could check his SWR for him.

I think it's rather short-sighted to look only at emergency nets to find the benefits of amateur radio.

-Tom R. N1OOQ randolph@est.enet.dec.com

|> the hobby. To receive a response back from them is an even greater pleasure.
|> Most of the time they aren't expecting anything and are ecstatic to receive
|> something.

Hi Paul. I like those cards too, but do you know about the ARRLs
First Contact Cirtificate? If you work somebody, and they tell you
that you are their first contact, just tell the league about it. Send
a note with the time and date of the QSO, and the persons name. You
also send an envelope addressed to the person and containing sufficient
postage. I send the 9X11.5 size folded in two and placed inside another
large one. The folks at the league, in the past, put the certificate
in the envelope along with a cardboard stiffener, and mail it. Sometimes
its a little tricky to get the new guys address, but its worth the
trouble. I have received a letter or a call from EVERY ham that I have
had a certificate sent to.

You don't have to be a League member to take advantage of this service,
and it is an excellent welcome to the hobby. I have seen the certificates.
They are nice.

73,

Jeff - AC4ZO

234. New Licence fees for Australian Amateurs

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-05 13:00:26 UTC
From: dave@eram.esi.com.au
Message-ID: <3egqha$mq8@eram.esi.com.au>
Source record: 253899
Cross-posted to: aus.radio,rec.radio.amateur.misc,rec.radio.info

Here is an official document that introduces the preliminary licence fees this year; the source is Roger Harrison VK2ZRH, the WIA Federal Vice-President and member of the WIA/SMA Liaison Committee. It first appeared on packrt radio, and subsequently as an insert with the WIA journal "Amateur Radio." No further comment is made.

WIA NEWS

From Roger Harrison VK2ZRH
WIA Media Liaison Officer
Released 14 December, 1994.
(Insert to Amateur Radio, January 1995).

AMATEUR RADIO LICENCES - NEW SMA PRICING POLICY

Licence Class Issue/ Spectrum Spectrum
Re-issue Maintenance Access Tax Total

UNRESTRICTED $25 $9 $35 $69

LIMITED $25 $8 $34 $67

INTERMEDIATE $25 $8 $34 $67

NOVICE $25 $5 $20 $50

NOVICE LIMITED $25 $5 $20 $50

BEACON $11 $5 $20 $36

REPEATER $25 $9 $35 $69

PRELIMINARY figures for new Licence fees, to be introduced this coming year, have been released to the WIA by the Spectrum Management Agency (SMA).

As you will note from the table here, there are to be significant rises in the cost of Amateur licences. It should be noted, however, that these are *preliminary* figures and that the final charges, when announced, may vary by as much as $10, up or down, according to an SMA spokesman.

The licensing costs were released to the WIA at an SMA Liaison meeting in Canberra on 5 December, attended by WIA Federal President, Neil Penfold VK6NE, Federal Vice Chairman, Roger Harrison VK2ZRH, Federal SMA Liaison Officer, Gavan Berger VK1EB and ACT Division Federal Councillor, Richard Jenkins, VK1RJ. Six senior people from the SMA attended. The meeting was chaired by the executive manager of the SMA's Customer Services Group, Peter Stackpole (VK1RX).

Paul Palmer, acting executive manager SMA Marketing Development Group, outlined the various components of the proposed fees and explained something of how they were derived.

The previous hundred-plus licence categories covering all services are to be reduced to just 18. Amateur Radio will be a single category, with seven sub-categories under the new Amateur Regulations to be announced early in 1995. Note the inclusion of the foreshadowed Intermediate and Novice Limited licences, and that beacons and repeaters will be classed in sub-categories of their own.

COSTS
The Issue/Re-issue cost depends on the type of licence. To first issue a licence costs the SMA about $140, it was revealed, but as Amateurs generally keep it for ten years, this is amortised over that period, yielding a cost of $14 a year. Renewing costs about $11, so the Issue/Re-issue cost totals $25.

The Spectrum Maintenance charge is the proportion of costs of the on-going work of the SMA.

The Spectrum Access Tax is somewhat more complex. The underlying principle is one of "spectrum denial." Primary spectrum users deny spectrum to other users, and it is on this basis the government charges the Access Tax. The SMA's "pricing formula", first revealed in their December 1993 Discussion Paper on Apparatus Licensing, takes into account five factors: spectrum location (i.e. frequency), geographic location (VHF-SHF spectrum can be "re-used" at sufficiently distant locations), bandwidth and area of coverage. The formula "values" the spectrum according to usage and demand. i.e. In Sydney, UHF attracts a high weighting; HF is low (effectively, shared globally). In arriving at the Spectrum Access Tax, the SMA excluded Amateur bands on which we are the secondary service, because it is shared use.

The figure arrived at, taking into account all the primary Amateur bands and applied nation-wide, was divided by the total number of Amateurs. So, if we can swell our ranks, licence fees should decrease! The *minimum* Access Tax fee is proposed to be $20. The Spectrum Maintenance charge is about 25% of the Access tax. Initial work on Amateur Licence fees yielded figures in the $300-$400 range, the WIA was told, and the SMA view is that Amateurs have been given "a pretty good deal." Work on determining the Issue/Re-issue and Spectrum Maintenance charges had not been completed in mid-December, so some variations to the final figures may be expected. All fees are to be finalised by 1 March, 1995.

In future, your licence, and your licence renewal, will show a breakdown of the costs making up the final charge.

At this stage, the SMA is not considering allowing any outside organisation to take over licence renewals.

Beacon licences will cost less because the WIA Divisions provide the initial spectrum planning function through the Technical Advisory Committees (TACs). The proposed Repeater licence fee was calculated on an Australia-wide basis. Although the TACs provide some initial spectrum planning, the SMA has to do some of its own, too, when licensing repeaters. Note that UHF CB repeaters

will attract a licence fee, even though CBers don't pay fees as CB is a Class Licence.

Five-year licences will be introduced, for which the Re-issue cost will be discounted, if payment is made up front. So a five-year unrestricted licence will cost around $301, rather than $345. This provision was made in the 1992 Radiocommunications Act. A five year limit was set, rather than 10 years, as the SMA wanted greater control on Apparatus Licensing than a 10 year period would allow, owing to rapid changes in technology.

In future, if an Amateur gives up a licence (e.g. becomes SK), a refund of the "unused" proportion of the licence may be provided.

The WIA is continuing discussions with the SMA.

>removed in the tire swap.

This is a problem for the bearings as well as for the radio. Continued arcing across the wheel bearings will damage them. Cars used to have a static cap, actually a little spring gizmo, that shorted across the wheel bearings to eliminate this problem with the old natural rubber tires. Tires then started to be made with carbon black added to synthetic rubber. This eliminated most static problems. But some tire manufacturers are using new materials in their tires, and the problem is coming back.

>Could the new tires be slightly piezoelectric? The noise is worse on a
>jiggly road.

No, the problem is that the tires aren't conductive enough. It's the old glass rod and cat fur problem. On a rough road, the wheel bearings are more intermittant in their contact so that you get more/bigger arcs.

> v-- see above
>I vaguely remember some magic conductive powder from the BOD which was to be
>blown into tires to cure this type of noise. DOES IT STILL EXIST? ANY OTHER
>SUGGESTIONS? I watched while the tires were changed, so don't think that
>there was any accident in jacking the car.

Graphite powder can be introduced into the tire, this will raise its conductivity and lessen the static buildup. Or a more conductive wheel bearing grease can be tried. But a static cap is probably the best solution short of changing back to tires with a higher carbon black content.

Calls for the experimental service are all 2x3 format with the first letter of the prefix being either W or K and the first letter of the suffix being X. Your call isn't 2x3, nor does it begin with W or K, so it's cool.

>what you guys can recommend. Make, Modem, Cost, Features.

I use the S-Comm 5K. It's simple, small, and reliable. It cost $250 with rack mount option (1 rack unit). It runs off 12 volts at a couple hundred mils, has provision for CTCSS and/or carrier squelch control in a number of combinations, has provision for a delay module for eliminating squelch crashes, has a TT passthru suppression option, has provision for a separate control receiver input, has a CW IDer and programable messages, and is well suppressed against lightning transients.

It comes with a comprehensive installation, programming, and service manual with theory of operation, schematics, and board layout diagrams. There are something like 100 different programable features (all programming is via Touchtones introduced either locally or remotely on either of the two receiver inputs), and it has three open collector outputs and three TTL level inputs, all available for general purpose use under program macro control. There's an on board realtime clock for timed macro execution.

Of great importance, the manufacturer is stable and very responsive to customer requests for assistance and service. S-Comm offers more complex controllers as well. The 7K has a phone patch built in, if you need that.

>I've read that this would be a very *bad* idea. Has anyone
>considered that this crystal controlled set would use a relay
>for TX/RX switching? This would slow down you communications
>to a great extent.

The relay switching time is very rarely the dominant delay in
a radio's TR timing. Most relays used for TR switching switch
in 3-15 ms. The critical parameter is usually receiver recovery
time, which for most radios can run 100s of milliseconds. It
often requires considerable modification to shorten this time.
With a crystal rig, it's often possible to leave the receiver
"hot" during transmit so recovery time becomes essentially nil.

Or the dominant delay is PLL lock time as the PLL shifts from on
channel transmit to offset by the receiver IF to act as the LO.
The settling time here can also be in the 100s of milliseconds
range for some radios. A crystal controlled radio doesn't have
this problem either.

If you have an interest in receiving real-time images from satelites
read on......

Equipment to receive these real-time images are manufactured in Queensland
Australia. This project began life as a research / recreational hobby by
a team of radio enthusists. The final outcome of the project was a system
to receive real-time images from polar orbiting weather satlites.

Images are available from American (NOAA), Russian (METEOR) and Chinese
(FENG-YUN) satelites as they traverse your geographical area. The
satelites transmit both visible light and infra-red images. Resolutions
vary from 2.4Kms to 5Kms per pixel.

The system comprises a simple omni-directional antenna, a suitable radio
receiver, demodulator card (AD converter) and viewing software suitable
for the viewing and manipulating images on IBM PCs.

An overall system price is in the order of $650 (Aust) with the possible
addition of a mast head pre-amp for $30. Various antenna equipment and
cabling is required and can be purchased for around $15. Detailed
diagrams are included for the construction of the antenna.

Please respond in e-mail if you are interested in obtaining more
information. Parts of the system are also available in kit form.

: well. It implies we're some kind of inexperienced beginners. Private
: pilots don't call themselves "amateur" pilots, so why should we?
: Perhaps "private radio operator" isn't a good term, but we can think
: of something better than "amateur" or "ham".

[climbs up on soapbox]

Why not the Most Worshipful Rough and Ready Rocket Corps of Excellence? Come on, guys, 'ham' isn't a dirty word and there's no need to disuse it because some yokel doesn't know what a fine and appropriate word it is. Ditto 'amateur', which is as precise a technical term for the Service as _any_ other, pointing up the essential divergence from 'professional' radio (or professional anything-else): _money_. That's it; that's all. Nothing to do with proficiency, not a bit. That tack is just plain wrong-headed emotional baggage that can be lost at the next stop.

'Amateur' means that you're as good as you are because you _want_ to be, not because somebody bought your contract. Doing something just for the joy of it is going to become a lost art if everything in life gets boiled down to a dollar value, and changing the label changes absolutely nothing if all you do is trade one set of emotional baggage for another. 'Amateur' is something to be proud of; our society is top-HEAVY with whores. 'Ham', too: not just anybody is qualified to run off at the mouth for hours on end for the whole bleedin' world to hear. Show-offs, Tom-fools, hams in the traditional sense ("My beam's bigger'n yours!", "Your only 40 over 9!", "Yeah, well my S-line is all round!", "And my dog can lick your dog!" ad sillium.....)

Take responsibility, change your own Point Of View, not the goddammed language.

[climbs off soapbox]

Cheers es 73,
RF Buchanan

Most of the repeaters I'm familiar with in northern Colorado use controllers by S-Comm -- 303-663-6000. They have at least 3 models, plus some specialized commercial versions:

5K - basic controller
6K - adds phone patch (maybe optional voice messaging)
7K - full featured, phone patch, optional audio delay and voice messaging.

We've found them to be extremely reliable.

250. GB2RS News 8th January 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-05 19:30:14 UTC
From: dave@llondel.demon.co.uk
Message-ID: <789359414snx@llondel.demon.co.uk>
Source record: 253778
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 8th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

An MBE for Ron Broadbent,

The RSGB installs its new President next weekend, and

Coventry Raynet were in action before Christmas.

Ron Broadbent, G3AAJ, was awarded an MBE in the 1995 New Year Honours list in recognition of his services to amateur radio. Ron is secretary of the amateur satellite organisation AMSAT-UK, and is Editor of its monthly magazine OSCAR News. We are sure that all of those listening to this bulletin will join us in congratulating him on this honour.

Clive Trotman, GW4YKL will be officially installed as the RSGB's President at an evening reception and dinner to be held next Saturday, the 14th of January, at Bridgend, Mid Glamorgan.

Coventry Raynet Group was involved in assisting the emergency services in the aftermath of the airplane crash in Coventry just before Christmas. The group would like to thank all radio amateurs who co-operated by keeping frequencies clear during this operation.

The next RSGB Microwave Round Table meeting takes place on Sunday the 5th of March at the Rutherford - Appleton Laboratory, Chilton, near Didcot, Oxfordshire at 10am. This year microwave television will be the theme of a joint meeting of the Southern Microwave Group and the British Amateur Television Club. Attractions will include technical talks, a bring and buy sale and a range of test equipment available for calibration and alignment of microwave equipment. For further details contact Mike Scott, G3LYP, on 01494 881298.

The secretary of the West Bromwich Central Radio Club is compiling a diary of events for 1995 and is seeking guest speakers. If you are willing to give a talk or presentation to a small, friendly club on a Sunday evening for about one hour, please contact Ian, G0PAI on 0121 561 2884.

Mike Shread, GM6TAN, has a new address. He is an RSGB Council Member and the RSGB QSL Bureau Sub-Manager who deals with Novice QSL cards. His address is: 15 Hardie Court, Aberchirder, Huntly, Aberdeenshire AB54 5TG.

A new RSGB Liaison Officer (RLO) has been appointed for Lancashire. He is Steve Ireland, G1VRH, and his address is 'Ashlea', 11 Wood Park Road, Marton, Blackpool, Lancashire FY1 6QS. Steve's telephone and Fax number is 01253 695920. RLOs hold a wide range of information and they are available to help any RSGB member seeking advice.

A new RSGB Liaison Officer (RLO) has been appointed for West Grampian, Highland and the Western Isles. She is Elaine Shread, 2M1DLV, whose address is: 15 Hardie Court, Aberchirder, Huntly, Aberdeenshire AB54 5TG. Her telephone number is: 01466 780739.

The Severnside Television Group 3 centimetre TV repeater GB3XG, became operational on Saturday the 10th of December. The repeater has its output on 10150MHz and its input on 10278MHz. Reports on coverage or requests for details should go to the keeper G8VPG, whose address is correct in the RSGB Call Book.

The Wolverhampton 2 metre repeater, GB3BX, was returned to service on Sunday the 20th of November. It now operates on channel R3, which has its output on 145.675MHz and input on 145.075MHz. Reports or requests for details should go to the repeater keeper G4JLI.

The Hexham repeater GB3TY, channel R6, was switched off on the 30th of November and is now closed down permanently. Any group or person wishing to continue with the repeater on a new site, should contact Ernie Bailey, G4LUE, Repeater Management Group, Zone 'A' Manager on 01226 716339.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From South Shetland Island, SP2QOH and SP2GOW will sign VP8CQR and VP8CQS respectively from now until November. Activity will be on all bands/modes, including RTTY.

From South Georgia, a group of operators is expected to sign VP8SGP from Thursday the 5th of January. Activity will be on all bands 160 to 10 metres using CW, SSB and RTTY.

And from Qatar, DL9FCQ, will be active from a camp near Doha from Saturday the 14th until Friday the 27th of January, mainly on 20 to 10 metres CW. His A7 callsign is not yet known.

We have no rally news for you this week as the next event notified to us is not until Sunday the 22nd of January. However, here are some dates for your diary:

The 1995 RSGB National VHF Convention is to be held at its usual venue at Sandown Exhibition Centre, Esher in Surrey, on Sunday the 19th of February. See January's RadCom page 31 for full details of the event which includes a comprehensive lecture programme.

The 1995 RSGB London Amateur Radio and Computer Show is to be held during Saturday the 11th and Sunday the 12th of March, at the Lee Valley Leisure Centre, Picketts Lock Lane, Edmonton, London. Full details of

the event will appear in the March edition of Radio Communication.

Now this week's contest news:

The RSGB CW AFS Team Contest takes place today, Sunday the 8th, and the SSB AFS Team Contest takes place next Sunday the 14th, both from 1400 to 1800 UTC. See the December edition of RadCom for further details.

And the RSGB 144MHz CW Single Operator, Fixed and All Others Contest takes place next Sunday the 15th from 1000 to 1600 UTC. See January RadCom page 81 for further details.

January's RadCom also includes the General Rules which cover all RSGB HF, VHF and ARDF contests during 1995.

This week sees the end of an era for the solar factual data. Charlie Newton, G2FKZ, has handed over his GB2RS work to Neil Clarke, G0CAS. Charlie, who will continue to chair the RSGB Propagation Studies Committee, has provided the GB2RS solar report without fail every week for 18 years on a purely voluntary basis. We thank him for this work.

And now this week's solar factual data:

Due to the Christmas holidays, we have an extended report this week. First a quick summary from the 12th to the 25th of December and then the normal report covering the period from the 26th of December to the 1st of January.

The period from the 12th to the 25th of December saw sunspot numbers decline from 82 to 48. Solar flux levels also declined from 99 units down to 80 units. Flares were reported on most days, the largest being an M2.5/1N on the 14th. Geomagnetic levels were mostly quiet over the period. They did, however, increase to active levels on the 24th and the 25th and rose to an Ap index of 23 units. The daily aa index on the 22nd was only 6.5 nanoTeslas, the lowest daily figure since the 4th of May last year. The F2 daytime critical frequencies at Poitiers averaged 7.1MHz. The 20th was the best day at 8.8MHz.

The period from the 26th of December to the 1st of January saw solar activity at very low levels and with the geomagnetic activity at mostly quiet levels. Sunspot numbers declined from 46 on the 26th to zero on the 1st. The mean for the period was 23. Solar flux also declined from 80 units on the 26th to 75 by the 1st. The average for the period was 78 units. Several very small B class flares were reported on the 26th. The electron fluence levels declined but are still at high levels. The x-ray flux levels declined from A4.4 units to A1.2 units by the 1st, the average for the period being A2.6 units.

The geomagnetic activity was at mostly quiet levels and averaged an Ap of 9 units. The most disturbed day was the 26th with an Ap index of 13 units. The state has been 'nil, nothing to report'. The aa indices, as reported by the British Geological Survey for the period from the 20th to the 26th, started at quiet levels with the 22nd being down to only

6.5 nanoTeslas, the quietest day since the 4th of May last year. Levels increased up to 64.6 nanoTeslas on the 24th but declined back to unsettled levels the following day. The daily average for the period was 26.2 nanoTeslas, about K3.

I'll repeat the figures: Spots - 23, Flux - 78, Ap index - 9, x-ray flux - A2.6.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 23rd to the 29th of December, averaged 6.9MHz, with the darkness hour lows averaging 2.3MHz. The highs were between 11.00 and 14.00 hours and the darkness hour lows occurred around 06.00 hours. The daytime highs have declined to the levels seen over the last few weeks.

I'll repeat the figures: Highs - 6.9MHz, Lows - 2.3MHz.

And lastly the solar forecast.

This week the more active side of the sun should be looking our way. Solar flux levels are expected to be at about the 80s and there is also the possibility of flare activity. Geomagnetic levels are expected to be mostly quiet, but may increase to unsettled by next weekend. Ionospheric MUFs during daylight hours are expected to be about 21MHz in the south and only 18MHz in the north. The darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Oscar and G7 Tango X-Ray series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Oscar series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

The problem is that you can turn *any* call into something obscene or
objectionable. My friends came up with some interesting phonetics for my
old call, N1LMB. The whole idea of disallowing certain suffixes because
someone might find them objectionable (I do agree about others, though,
like SOS -- N1SOS wouldn't be a good idea on CW!) is assinine.

I'd say yes. If they freak about the minute radiation from Walk/Disk-mans, they really go nuts on HTs, GPS units, etc. Keep in mind that most flight attendants haven't a clue why electronic devices cannot be used during portions of the flight. They have probably been led to believe that if someone spins up a CD or turns on a receiver, the aircraft will go into a tail spin.

I wanted to use a GPS unit on a trip to Hawaii so I could track our position across the ocean on a long and boring flight. The flight attendant said she'd take it from me if she even saw me take it out of my briefcase.

Most laws regarding use of communication electronics on aircraft are governed by the FCC rather than the FAA as one might assume. Cell phone signals are limited on the ground by buildings, ground clutter, etc. but once at altitude, one phone can lock up a whole cellular network (or so I'm told). I'd assume an HT could do the same thing to 2m repeaters.

Of course the airlines worrying about receivers is mostly overreaction. I 'spose something close to the cockpit could cause a navigation problem but hell, the cockpit is using GPS and running tons of other equipment that's probably cranking out enough RF to cook potatoes. You wouldn't think they'd worry about someone way back in coach.

RS-15 just came over my location in College Station, TX at a pretty high elevation (around 80 deg). Using keps from orbit 76 for object 23439 and orbit 65 for object 23440, this was my finding. I began receiving the beacon more than 15 minutes into object 23439 being high overhead. This was a few minutes before 23440 was to come into view. At the point 23440 was supposedly overhead, I was already hearing the dopplar dropping. When 23440 was about 6 minutes to LOS, I already lost the beacon. So in conclusion, it appears that with the kep set I have, 23440 more closely matches with what I observed but is still 5 minutes behind.

Why is it so difficult to get reliable keps on this bird? NORAD claims to be able to pin point the location of an incoming ICBM but they can't track a satellite that has been up for over a week.

SB QST ARL ARLB001
ARLB001 IARU satellite post

IARU fills satellite post

Bruce Lockhart, SM0TER, has been named IARU Satellite Frequency Coordinator, whose (volunteer) job will be to coordinate frequencies and emissions of planned amateur satellites with existing and planned amateur satellites. The appointment was made in consultation with major AMSAT groups in Europe and North America.

Lockhart also will maintain records of frequencies and emissions of all operating and planned amateur satellites and provide advice on suitable frequencies and modes for planned amateur satellites, based on existing and planned usage of the amateur satellite bands and the IARU band plans.

While this is a technical position, the satellite frequency coordinator position also assists in the protection of bands allocated to the amateur satellite service. Lockhart will work closely with IARU Satellite Adviser Hans van de Groenendaal, ZS5AKV.

Lockhart, an engineer, is self employed as an international consultant in the process control industry. He was first licensed as K3ZAQ in 1963 and has operated on all bands from 1.8 MHz to 2.4 GHz. He is a member and Technical Secretary of AMSAT-SM, is a member of AMSAT-UK and AMSAT-NA, and is known in the amateur satellite community as the original designer of the TrakBox.

In September the Administrative Council eliminated the position of satellite coordinator and created two in its place: satellite adviser and satellite frequency coordinator.

SM0TER's address is: Bruce C. Lockhart, Rymdgatan 56, S 195 55 Marsta, Sweden. E-mail: BLOCKHART at CCONTROL.SE

Of course, there are synthesized radios that do not shift the PLL for transmit/receive switching. The old FT227R comes to mine, and it does some pretty reasonable packet work. It is still not quick enough for running ethernet, but it beats the slow Kenwoods that came out shortly later.

I suspect that what happened is that "ham actor" came to be thought of
more generally as slang for "amateur actor" (theatricality being
unprofessional in the theater), and so "ham" was taken as a synonym
for "amateur" & got applied as such to radio operators.

Message-ID: <3ei001$atk@maggie.austin.wireline.slb.com>
Source record: 253898

The 1x2 calls with first letter X in the suffix were also reserved to experimental stations until the late seventies when the FCC retired the 20-years-as-an-extra-gets-you-a-custom-call rule and had to give all current extras a custom call.

I have a photocopy of a letter written by the station engineer at broadcast station WFAA in the late 30's (the station is in Dallas and still on the air). The contents of the letter are not of interest to me, but the letterhead is: it has my call with the annotation "experimental station on the ultra-highs".

As far as I know, I'm the only amateur that has held my call.

Wayne, W5XD

ZCZC AE76
QST de W1AW
DX Bulletin 1 ARLD001
From ARRL Headquarters
Newington CT January 5, 1995
To all radio amateurs

SB DX ARL ARLD001
ARLD001 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin, Paul, KB1BE, Joe, NJ1Q, the Yankee Clipper Contest Club PacketCluster network and the Contest Corral Column from the pages of QST magazine. Thanks to all.

MALDIVE ISLANDS. Carlo, I4ALU, was supposed to have been active until January 6. As of bulletin deadline there were no QSNs for him on our Connecticut PacketCluster node.

BOTSWANA. Although Dave, A22MN, will move Finland sometime in February, he continues to concentrate on 160 and 80 meters. QSL via WA8JOC only. Dave is planning jaunts to OH0, OJ0 and MV Island for later in the year. If you have already worked him on the low bands, he requests that you do not call again. He wants to work as many as possible and he reports working too many repeat callers.

KERMADEC ISLANDS. The DXpedition by Barry, G4MFW/ZS1FJ, has been canceled.

LEBANON. Timo, OH1NOA, will sign OH1NOA/OD5 until August. He prefers CW and operates 80 through 10 meters. QSL via OH1MRR.

SOUTH SHETLAND ISLANDS. Andy, SP2GOW, is signing VP8CQS from Smith Island. Try 80 and 40 meter CW from 2330 and 0300z. QSL via DL1EHH.

MACAO. Listen for Noda, JE7RJZ, as XX9TJZ from January 9 to 13. There have been reports that he will be working through OSCARs 10 and 13. QSL via JA7FWR.

PACIFIC DXPEDITION. Masa, JE1DXC, isn't the only one planning island hopping. Yoshihiro, JF6BCC, will be on from Saipan, Belau and possibly Guam beginning in late January. Listen for KH0/KH2GR

January 27 to 29, KC6IY January 29 to February 1 and KH2GR February 2. QSL via JF6BCC.

QSLing the FALKLANDS. Les, VP8CPC, reports that any mail send to the Falkland Islands ARC should have ''VIA UNITED KINGDOM'' appended to the address. Without that information added, mail is directed through Chile and is never received by FIARC. Les handles cards for many other VP8s. Address cards bound for the Falklands to FIARC, the Falkland Islands Amateur Radio Club, PO Box 260, MPA - Mount Pleasant Airport, Falkland Islands VIA UNITED KINGDOM.

THIS WEEKEND ON THE RADIO. The ARRL RTTY Roundup starts at 1800z January 7 and ends at 2400z January 8. USA stations exchange signal report and state. Canadian stations exchange signal report and province. DX should exchange signal report and consecutive serial number, starting with 001.

Michigan QRP Club CW Contest 1200 January 7 to 2400z January 8. Exchange signal report, QTH of state/province/DXCC country and MI QRP number, power output for non members.

QRP ARCI Winter Fireside Sprint, phone. 2000 to 2400z January 8. Exchange signal report, state/province/DXCC country and QRP ARCI number. Non members send power output instead of QRP ARCI number.

For complete contest rules for these events, check out pages 121 and 123 in December QST.

Dennis Henderson <wdh@Eng.Sun.COM> wrote:

>Amen. Can one ask for another callsign if they dislike theirs enough to
>be embarrased about it? My wife got KD6BUN.

You can request a callsign change whenever you want to.
But you will receive a callsign from the same group your original
callsign was from--providing there are callsigns still available
from that group.

When you upgrade you can request a callsign from the group
commensurate with the new class of license. Tech to General will
be from the same group.

Anyone else feel free to add or take away from what I have said here.
Seems no one can say anything in here without the "know-it-alls"
putting their flavor in. Those who actually do know it all are
more than welcome to add whatever may have been left out, please do. :)

268. map of transmitters in your town or neighborhood

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-06 02:29:13 UTC
From: parnass@nwsf.ih.att.com
Message-ID: <D1ypKp.5sG@nntpa.cb.att.com>
Source record: 253911
Cross-posted to: rec.radio.swap,rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.misc

Want to "see" where the transmitters are located in
your town or neighborhood? Find the source of that
rotten intermod interfering with your repeater or scanner?

From the rec.radio.scanner FAQ article:

Over 15% of the FCC licenses, including many fast food
restaurants, contain transmitter latitude and longitude but
specify no transmitter city. To determine the location of
those transmitters requires using the latitude and
longitude information.

As I have already done for dozens of radio enthusiasts in
several states, I will locate FCC licensed and selected FAA
transmitter sites in an area of your choice, and produce a
custom color map. I call this new innovation RadioMap(TM)
service. It allows you to identify antenna sites
(including paging and cellular phone cell sites) and
visualize the transmitter locations in your neighborhood,
near your office, at an airport, and other places of
interest -- from VLF through microwave.

This is completely different from the limited maps
displayed on the Grove Enterprises CDROM. Through a new
licensing arrangement with a professional mapping company,
RadioMap shows detailed streets, railroads, rivers, and
cities. Ham radio stations are not shown as they would
clutter the RadioMap. RadioMap includes key sheets which
list frequencies, callsigns, and licensee names. In rural
areas, ranges of up to 10 miles are possible, while ranges
of 1/2 to 3 miles produce best results in urban cities.

I will produce custom color 8-1/2" by 11" RadioMap reports,
suitable for framing or laminating, for areas in any of the
50 states. Send $19.95 for each color RadioMap, your name,
address, and telephone number, along with center location
(nearest intersection of 2 streets, or latitude &
longitude) to: Bob Parnass, 2350 Douglas Road, Oswego, IL
60543. tel. 708-554-3839 6-10 PM central time.

NOTE: please don't send e-mail to this account but feel
free to phone me at 708-554-3839 evenings if you have
a question.

"Station address"? You mean, fixed station location? Not mailing address, right? If so, there's a very easy way: forget about it. The FCC doesn't collect the info any more, and took it off the license document.

(Of course, changing mailing address does indeed require a 610.)

Asterisk indicates predicted value. No predicted values have changed
relative to the set of T-indices contained in last month's Summary.
For information concerning ASAPS for an IBM PC (or compatible) contact IPS.

The IPS Monthly T-index is derived from the observed monthly median values
of foF2 for each hour at up to 40 ionospheric stations worldwide.
These records become available from IPS stations in Australia very soon after
each month, but the majority are received up to one year later.
This means that the exact observed value of the monthly T-index is not
available until some months later.

The predicted smoothed monthly T-indices are computed by using a statistical
analysis of the observed monthly T-indices for all solar cycles since 1938.
The IPS T-indices may not be updated each month but only when sufficient new
data becomes available.
==========
2. FLARES AND SHORT-WAVE FADEOUTS

All M flares with an energy greater than or equal to M1 are tabulated under
class M flares. However, times of fadeouts are shown only for flares with

an energy greater than X-ray class M3.

DATE CLASS M CLASS X FADEOUT POSSIBLE
FLARES FLARES ON DAYLIGHT CIRCUIT
14 Dec 1

2.1 Comments on Solar Activity.

Solar activity was moderate on 14 December with an M2.5/1N flare at 0541UT.
Very low to low activity was observed on other days.
The maximum 10cm flux value for the month was 99 on 12 December. The minimum value for the month was 76 observed on 27 December. The rise in flux values during the interval 9-20 December coincided with the appearance of the M flare producing sunspot region. This region appeared on 8 December and transited the west limb after 19 December.

==========

3. GEOMAGNETIC DISTURBANCES (for Learmonth, WA)
DATE COMMENTS

2 December Active - minor storm levels observed in northern hemisphere. Unsettled levels observed at Learmonth.

6 December Active to minor storm levels observed.

24 December Active levels observed.

3.1 Comments on Geomagnetic Activity.

Apart from the disturbances mentioned above, geomagnetic activity was at mostly quiet to unsettled levels throughout December. The highest A index for the month was 27 observed on 24 December.

==========

4. IONOSPHERIC DISTURBANCES (for Sydney)
DATE MUFs

7 December MUFs were 15-25% depressed.

16 December MUFs were 15-30% depressed during local day, and 15-30% enhanced during local night.

17 December MUFs were 10-15% depressed.

20 December MUFs were 20% depressed.

4.1 Comments on Ionospheric Conditions.

The most significant ionospheric depression for the month was observed on the 7 December.

==========

Has anyone in the area had their moble rig professionally installed? If so who didi it and how much did it cost. I just bought a new car and it has a nice big slot for a CD player which I probably will never buy. RAther than drill and use an under dash mount (which prolly won't work because the car is so rounded) and have a wire running, I would love if I could have it installed to 1) fill that little hole and 2)Prove me with a convenient 2m/440 Link w/out tearing my new car apart.

Follow up to email

Thanks,
Nick.

>what you guys can recommend. Make, Modem, Cost, Features.

I have seen good luck with the S-COM series. They are not
perfect, but the guy who makes them has finally agreed
that reverse autopatch is not illegal and added that
to the code, so feature expansion is not out of the question.
He seems to maintain the software so that weird behaviors
and bugs are fixed in a reasonable time.

They do the basics and more and are not outrageously priced.

If you want really cheap, build one of WB3ESS' controllers,
after I bug him about the Touch Tone detection algorithm.
Otherwise, they are fine for basic setups.

Commercial Radio Exams at MIT

** MROP, GROL, GMDSS, Radar and Telegraph exams in Cambridge MA **

** Sat. January 14th 1995 **

The MIT Radio Exam Team will hold exams for all classes
of commercial radio license at 10 AM on Saturday January 14th
in Cambridge MA at 77 Mass Ave in MIT's Room 1-150.

We will conduct exams for the General Radiotelephone Operators
License, the Marine Radio Operators Permit, the Global Marine
Distress and Safety Systems Maintainer and Operator Licenses, the
Radar Endorsement and the Radiotelegraph operators Certificate.

Our next commercial exam session will be held at 10 AM on
Saturday March 11th in Cambridge MA at 77 Mass Ave in
MIT's Room 1-150.

A regular schedule of exams is planned for Cambridge MA on the
second Saturday of odd numbered months. For more information call
Nick at 617 253 3776 (9-5).

There is a $35 examination fee. Bring the ** original ** and a
copy of any commercial license or proof of passing certificates
you want to claim credit for. Also bring 2 forms of picture
ID, a black pen and a pencil. For all licenses except the GROL
there is an additional $35 regulatory fee, you must attach a check
made to the FCC to your successful application. For the
Telegraph exams bring 2 passport style photos in an envelope to
attach to your application

* The FCC has delayed the imposition of a regulatory fee on GROL
applications pending congressional instruction on how to treat
lifetime licenses. !!!

Copies of the question pools are available from the
Government Printing office or from W5YI at 1 800 669 9594.
This is probably the best study guide available for the
GMDSS, Radar and Telegraph exams.

* A comprehensive text book by Fred Maia and Gordon West
covering the MROP and GROL exam material is now available at
Radio Shack.

The General Radio Telephone Operators License is required to
service transmitters in the aviation, maritime and international

radio services. A Maritime Radio Operators Permit is required to operate radiotelephone stations aboard ships carrying passengers for hire and certain aviation and coast stations. Large ocean going ships will be required to carry two Global Maritime Distress and Safety Systems - operator licenses. A GMDSS Maintainer License is required to service GMDSS equipment. A Radiotelegraph Operators Certificate is required to be a radio officer aboard certain large ocean going ships.

Amateur Extra Class operators may be particularly interested in obtaining a commercial telegraph license as they will receive credit for the required class code exam. Bring your original amateur license and a copy to claim this credit.

The MIT Radio Exam Team operates under the auspices of the National Radio Examiners COLEM, part of the W5YI group.

> N3OGH

Hi Bill,

I just wrote a long comment about this recently, but to sum up, most of the crystal-controlled relay-switched rigs work better for packet than the solid-state synthesized rigs. The fault here is the synthisizer. Many synthesized rigs need to have TNC TXdelay set for 200+ milliseconds to allow the transmitter time to get on the air on frequency. Handheld radios are usually worse.

The crystal controlled rigs come up on-frequency, and unless you get a radio with a very slow relay, the relay is pulled in within 50 milliseconds. As an example, the rigs we have the >best< success with here on two meters at 9600 are old '70s vintage commercial mobile radios.

The relays in these radios operate in 3 milliseconds to keyup, and 4 milliseconds to go back to receive. The relay is used only for antenna switching from the receiver to the transmitter. The solid state power switching is sequenced so that RF is not actually generated until the relay has closed. We discovered (by measurement) that the delay was a lot longer than needed - about 60 milliseconds. By changing capacitors in the time constants for the delays, we sped the transmitter up to a 7 millisecond keyup delay.

Hope that gives a little insight as to where the problem really is.

73, Bob

: mighty who might be looking to bash the new guy. There sure
: wasn't any derisive comments made novice to novice because
: each was just as shaky at the key.

When I hear someone bash a newcomer for not using the "correct" procedures on a local repeater, or happen to utter the word "destinated", I wonder how much of their own humble beginnings they have forgotten. On CW, I remember my QTH was "MANCHESTER, dah-dah-di-di-dah-dah CONN di-dah-di-dah-di-dah". It was a miracle that I managed a few contacts a night. I learned more efficient and socially acceptable procedures slowly. I remember fondly a few kind folks who taught me by example, or gently explained better procedures. There were probably a few lids who flamed me to ash; they apparently didn't have much effect because I don't remember them at all.

As a non-ham, Technical Service and Support Professional, I am
interested in your requirement that the applicant for this job
must be a "Licensed Amateur Radio operator". With over 25 years
of active electronics experimenting and repairing experience,
your requirement seems a little spacious. Unless, of course, the
sucessful candidate will have to operate a station to handle calls
on the air, thus violating the requirement that Amateur Radio not
be used commercially... As one of your first customers to place
an order for your UHF SWR meter (about two months before you
actually released it-remember Global Wulfsberg Systems-Sundstrand?)
I have enjoyed using your equipment and usually have my 2 meter HT
on, listening to the Boeing (K7NWS) repeater. I also fix the
occasional broken "rig" that friends drag over from time to time.
Is there some reason that you wouldn't like me to send in my resume?

I thought of a significant difference between laptop computers
and walkmans/radios. The latter normally has some sort of
antenna attached--that headset cord isn't too difficult to use
as an antenna. I think some FM receivers actually use the
headset cord as the antenna. Remember, to cause interference
you not only have to generate a signal, but somehow couple it
into the device being interfered with. Of course, radios aren't
useful without antennas.

Thailand used to have NTSC TVs (maybe still has) but there were problems
with mains ripple on the DC lines. You don't need quite so many uF in the
hum filters at 60Hz. result was often a 10Hz wobble in the vertical or hum
bars at 10/20Hz. I remember studio monitors with banks of 100uFs on the back
panel!

Transistor equipment and switching power supplies might have solved such
problems for good equipment. Probably leaving troubles only on really cheap
stuff!

OTOH several US Firms bring training videos to Europe and show them on
unmodified VCRs and Barco's with just a transformer to adapt the mains from
117 to 230v and nobody is the wiser!

The same urban legend was printed in Popular Electronics many years ago (I think I probably still have it in the attic somewhere.) They had no evidence to support the story then and I doubt there is any more now. I doubt that we will ever know the true derivation of the term.

>worry about someone way back in coach.

well, maybe...but FM immunity is the new problem being solved right now in aircraft nav equipment. more a problem in other countries than North America, older nav equipment had a tough time being near high power FM broadcast stations.

GPS's don't transmit. Weather radar is on the order of 100W or less peak (I think a TWR-850 is like 25 watts peak...) DMEs seem to be the new high power transmitters along with HF radios.

also -- who says the antennas are up by the cockpit or that that's where the radios are? panel mount radios are common in private and small aircraft but not in aircraft of any size.

aircraft radios are remotely controlled, and generally mounted in any nook or cranny that can't be used for something that would generate revenue (so we end up with the avionics mounted in the wheel wells or *behind* the galley with all the problems of access if there's a problem and things like attitude heading reference systems that want to be buried near the aircraft CG...)

antennas/sensors are located all over the plane's skin because of things like keeping the nav antennas away from the comm antennas away from the transponder and radar and dme antennas and adf antennas etc...basically all the antennas have to be away from each other and yet still in a position to do what they need to do. this means just about all surfaces have something on them, both top and bottom....

then there's all the cabling from the antennas to the various equipments and to the displays or other data users and to and from the control head. and all that runs around the aircraft in the walls and under the floor...

i believe the original problem was that radio receivers could generate on channel spurious that could block the navigation and instrument landing systems...pretty serious stuff. i probably wouldn't happen to most people but it only has to happen once to be a black eye both for the amateur service and the airline industry.

probably the best thing to do is to put away the toys while flying and read a book while in flight. given there are a lot of things that can knock an aircraft out of the sky, it doesn't seem like one should tempt the flyswatter of god over something as minor as using a radio in a plane during flight.

if you want to operate from an aircraft, get a group together and charter one just to do that...heck with a bit of planning, you might even be able to work field day from the goodrich blimp...

(humm...there's a thought..tethered balloon with wire antenna below the gondola for field day....wonder if power and rf could be multiplexed to avoid having to carry a generator up the basket...?)

The principal impetus for the government to tolerate, and even promote, amateur radio was to provide a pool of self-trained radio operators who could be called to military service when needed. This is exactly what happended in WWI and WWII.
The main thing was morse code, which was widely used by the military in those days, and takes a long time to learn. Secondary interest was in experimentation, and public service emergency communications.

The other reason we've been tolerated is that just about nobody wanted our frequencies; or to put it another way, we got the frequencies nobody else wanted. That's why hams originally got "200 meters and down"; the experts of the day thought those frequencies were useless. It was the hams who "discovered" shortwaves and VHF. This is also why we keep losing bands; commercial interests are finding out how valuable they are, and we lose them. I think we'll hold on to 2 meters and parts of 440, but you can kiss everything else above 200 MHz goodbye, no matter how much public service stuff we do. Just one ham's opinion.

[delete]

Indeed. Fortunately, Part 97.1 recognizes other purposes for the service that support the public and national interest, including all the ones you proceeded to list. Direct emergency comms are an infrequent, though still not insubstantial, part of the amateur service, but it is primarily those other things that make amateurs valuable to the public and the nation.

Self trained technicians, and people with an awareness and affinity for communications technology, provided at no cost to the government, are primary contributions of the amateur radio service to the national interest. SOTA experimentation is also a valuable, though relatively minor, contribution of the amateur service. Mostly, amateurs are the world's largest beta test organization for those popularizing and lowering the cost of communications systems.

The most proximate example of the latter contribution is packet radio. Amateurs took a government developed idea, found ways to do it cheaply with mass produced systems, and then beta tested the hell out of the systems. Those systems then found their way into military and commercial uses that now outnumber amateur uses. No commercial company could have afforded the field testing that amateurs provided, certainly not the little garage shop companies that pioneered the field.

PRESS ADVISORY FOR IMMEDIATE RELEASE
Larry Earlix, KC6JEV Janurary 10, 1995
MONTEREY, CALIFORNIA

Local Ham Radio Operators Sponsor Regional Event In Monterey

On Saturday, January 21, 1995, from 7am to 2pm, local ham radio operators, along with the Naval Postgraduate School Amateur Radio Club, will host the 6th Annual WINTERFEST, a regional gathering of ham radio operators from all over the West Coast.

This event, free to the public, will be held in the College Center at Monterey Peninsula College. WINTERFEST will feature displays, contests, and demonstrations of amateur radio.

In attendance will be representatives from the AMATEUR RADIO EMERGENCY SERVICE (ARES), the folks who handle emergency messages during earthquakes and other disasters, the MILITARY AMATEUR RADIO SERVICE (MARS), the folks who keep families in touch with the troops during operations like `Desert Storm', and representatives from the AMERICAN RADIO RELAY LEAGUE (ARRL), the nation-wide organization of Amateur radio operators. Members of the club will also have booths to answer any questions about ham radio. For those interested, there will be information on classes, to help folks pass the exam to become an amateur radio operator

Directly on the site, organizers will set up a `special event' amateur radio station, operating on emergency power. This station will make 2 way contacts with other ham operators, all over the world, in celebration of the event. Visitors may send, non-commercial, messages any where in the world, at no charge, through a digital radio network called PACKET. PACKET is a voluntary network of local hams, all over the world, who use computers to automatically transmit, receive and relay messages to nearly every place in the world.

Demonstrations will include, classes on the Internet and ham raido, how to become an amateur radio operator, how the amateur radio emergency service works, how to bounce radio signals off satellites and the moon, amateur television, Morse code and voice transmissions. State-of-art equipment will be on display and demonstrated. There will also be a flee market that will include venders from all over the country.

WINTERFEST is an event sanctioned by the American Radio Relay League (ARRL), the nationwide organization of ham radio operators.

The Naval Postgraduate School Amateur Radio Club, which represents only a portion of licensed ham radio operators in Monterey County, has over 250 members.

294. CWIST Friday Night Fist Function

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-06 17:18:57 UTC
From: rdkeys@csemail.cropsci.ncsu.edu
Message-ID: <3eju21$5jd@taco.cc.ncsu.edu>
Source record: 253792

For Those Interested In CW Sorts of Things:

I will be on again at the appointed midnight hour for the continuing saga of the Sacred and Most Honorable Friendly Society of Brass Pounding Fist-Functioning CWISTS.

For the past several weeks, I have not been around for the CWIST Friday Night Fist Function. The holiday schedules were hectic, and I even missed the traditional SK Night. But, this Friday night seems like a good one, again. So, consider this the posting for the gettogether. It is a bit late, but sorry about that.

Remember that the time is midnight LOCAL time, so that folks plus or minus a time zone or two should be able to work others an hour earlier or later if they want to play around longer on the brass. Concievably, one could pound brass for the entire day depending upon skip and have the possiblity of working other CWISTS.

Note that six possible frequencies are available for use +- QRM. 1802.5, 3702.5, 7102.5, plus non-US compatible or capable frequencies of 1820, 3520, 7020 khz, for the Europeans, Asians, etc, who don't inhabit the novice bands. I don't know if that will work well, but we will give it a try. So, check whatever of the six frequencies you can use and if you don't hear anyone give a call or QSY to another channel. I will monitor/scan as many as I can but probably only work the 160/80 channels.

I will be on 3702.5 at midnight EST (0500UTC). I will conduct the session as an informal net, at that time, with me at the helm, unless anyone else wants to take the reins.

I will be on 1802.5 at 1 am EST (0600UTC). I will conduct the session as an informal net, at that time, with me at the helm, unless anyone else wants to take the reins.

I may or may not be on much later depending upon how the java holds out, and whether or not the glass arm sets in again.

If you can't make either session, drop by earlier or later on any of the six frequencies to check if anyone is around, ON THE HOUR, after dark, or maybe from 0200UTC onward for the US folks. This week is gonna be quite cold all over, so the propagation after dark on 160 and 80 should be several thousand miles, easily. 40M may or may not be very good at that time.

Hope to see you there!

Definition: A CWIST is a person with an active interest in the PRACTICE
and USE of continuous wave radiotelegraphy as directly is
appliccable to amateur radio. Such PRACTICE and USE may
take the form of learning about radiotelegraphy and its
history in amateur/commercial areas, its application to radio
telecommunication, the practicing of the art and craft of
radiotelegraphy, and the refining and developing of the
technology of radiotelegraphy.

Let us all work together to continue to advance and promote the friendly
use of CW on the amateur radio bands.

Let us continue to assist and help the newcomers and slowspeeds who
are trying to get their CW going.

Let us to continue to promote the use of whatever gear you have up
and available, be it the newest of sorts or the oldest boatanchor.

Remember, CW generation has not changed since the days of Poulsen arcs,
Alexanderson alternators, and Pliotrons.

Let us continue to promote the sharing and fellowship of the history
and traditions of amateur radio (this includes all you OTs out there
that have all sorts of goodly tidbits of history to relate to the young
squirts on the block, and it includes all you young squirts on the block
who, even though a bit new at CW and radio are the future of the service
or hobby or profession).

Let us continue to promote the ``elmering'' of all of our new folks
by the old timers aboard, in any way that we can. We should not be
out to convert the brethren to CW, but should be there to elmer them
and assist them in learning/practicing their skills, if possible.

So, OTs aboard, young squirts in the wings, high-speed afficionados of
the art, and slow-speed ragchewers, join in on the fun. If your
equipment is old boatanchor, so what. If your signal is a bit weak or
chirpy, so what. If your antenna is just a mere piece of wire up into
the trees, so what. YOU can still join in and participate.
YOU are the folks who will make it what it can be, a goodly learning
time and an enjoyable evening for all.

See You There OM/YL.....

299. Kenwood Computer/Transceiver Kit For Sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-06 18:23:58 UTC
From: cwtech@infinet.com
Message-ID: <3ek1ru$lk4@rigel.infinet.com>
Source record: 253797
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.homebrew

I have a partially assembled transceiver/computer interface kit for Kenwood rigs I will sell for $25.

Explanation: I sell these kits based on my 2/93 QST article ("Everything You Always Wanted to Know About Computer Controlling Modern Radios"). They are also detailed in chapter 22 of the 1995 Handbook. Anyway, I designed a new circuit board for the Kenwood models and built an interface with it to the point that I could statically test it. It works and I incorporated the new PCB in the kits.

Having no Kenwood radios, I don't really have a use for the interface board and I wouldn't think of disassembling it for kit parts. Soooo, if anybody wants a cheap way to get a nice interface, buy this board and put it in a case, add the cables (provided) and you're ready to go. I usually sell these kits for $49, so this is a pretty good deal.

I also still sell the kits for both Icom/Ten-Tec/Yaesu $47. E-mail if you're interested. Thanks.

300. Long dahs using MFJ 407C keyer

Date: 1995-01-06 18:27:18 UTC
From: djenkins@jetson.uh.edu
Message-ID: <3ek226$82u@masala.cc.uh.edu>
Source record: 253796

I'm learning to use paddles/keyer, so this may be a user problem.

Every once in awhile (maybe 5 times one evening, maybe not at all for an evening or two) I will be merrily sending code along in auto mode, and I will get an extra long dah--about 2-3 times longer than it should be.

Has anyone else with the MFJ 407C keyer had this problem? Got a solution? I called MFJ and they asked me to get the rev. level of the EPROM and call them back, which I will. My chip says "113" (could be 1.13 -- can't tell if the dot is dirt or a real period) and is dated 1993.

303. Kenwood 732 Intermod

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-06 19:29:29 UTC
From: jws@fc.hp.com
Message-ID: <3ek5mp$ba5@tadpole.fc.hp.com>
Source record: 253800

Are there any known problems/fixes for what appears to be intermod problems on the 440 band for the Kenwood 732? My older 701 doesn't generate nearly the noise as the newer, higher-tech 732. The 732 appears to be picking up local UHF pagers, and possibly cellphone signaling.

I'm not in a particularly high-RF area, but monitoring a 440 repeater is still very annoying.

John, NK0R

306. Techs should've gotten 2x3 calls

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-06 21:18:08 UTC
From: drewbob@mit.edu
Message-ID: <3ekc2g$34b@senator-bedfellow.MIT.EDU>
Source record: 253803

I look over the most-recently-issued callsigns, and I notice that the 1x3s are almost all gone, everywhere. The Tech surge has dried up the pond.

When I first got into ham radio in the 70's, you had to be an Advanced licensee to qualify for a 1x3 call. Even the Generals had to stick to their 2x3s. And as I struggled (unsuccessfully) to get my Advanced, it wasn't the freq. privileges that urged me on, nor a tremendous interest in the theory (I was 13 at the time and it was really beyond me...the Advanced test used to be a lot harder back then) - it was that elusive 1x3 callsign. That was the incentive. Well, I took that test 4 times and failed every time, and this was back when you had to go to the FCC field office to test, and wait a month if you failed.

Sixteen years later the bug bites again (I saved it, it's a Vibroplex) but nowadays they give a once-coveted 1x3 to the vast majority of entry-level hams. I was disappointed. And it seems so foolish! They should have given Novices & Techs 2x3s, Generals 1x3s, Advanced 2x2s, and Extras...well, they ran out too, but if I'd been a year or two ahead of myself I'd have gotten a 2x1.

Now, it's too late! They're gone (almost)! No more 1x3s, their dubious utility as an incentive now cast into an all-consuming fire of Techs! I hope you all realize how lucky you are. Any 1x3, even prefixed with "N", is a preferred call in my mind.

OK. Just had to get that off my chest.

Propagation Forecast Bulletin 1 ARLP001
From Tad Cook, KT7H
Seattle, WA January 6, 1995
To all radio amateurs

SB PROP ARL ARLP001
ARLP001 Propagation de KT7H

Solar activity was down a bit last week. On Saturday and Sunday
there were no visible sunspots. Geomagnetic indices were also
quiet, and over the weekend there were many periods with a K index
of zero.

Look for solar flux to rise slightly to a peak near 85 around
January 8 and 9, and then dip again to the low seventies for the
last half of January. Geomagnetic indices should be very quiet,
except January 20 and 21 when we should see some mildly unsettled
conditions.

Sunspot Numbers for December 29 through January 4 were 40, 12, 0, 0,
11, 24 and 36, with a mean of 17.6. 10.7 cm flux was 79.7, 76.6,
77.4, 75.4, 77.3, 76.8 and 76.9, with a mean of 77.2.

The path projections for this week are from Las Vegas, Nevada and
Jacksonville, Florida to Lebanon.

From Nevada, 80 meters should be good around local sunset and again
after 0130 to 0500z. Check 40 meters around local sunrise and from
2330 to 0230 and again from 0500 to 0600. 30 meters looks good from
1500 to 1630 and around 2230 to 0030. 20 meters should open most
days around 1530 to 1600.

From Jacksonville 80 meters should be good from local sunset until
around 0530z, after sunrise in Lebanon. 40 meters should be open
from 2130 to 0630, with marginal conditions around 0100. 30 meters
may be open around 2000 to 2230, and 20 meters from 1300 to 1630.
17 meters looks good from 1430 to 1545. On some days there may be a
15 meter opening around 1500.

308. Re: Origin of term - radio HAM ???

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-06 22:04:36 UTC
From: chilton@emc.com
Message-ID: <3ekepk$6up@ns0.emc.com>
Source record: 253730
Cross-posted to: alt.usage.english,rec.radio.amateur.misc

This discussion comes up a lot; doesn't it?

Over time, I have been convinced that the following is the most plausable origin of the term "ham". It is also obvious to me that a provable origin will not be found since one has not been presented in any of the prior waves of discussion.

Theory has it that the term is passed down from days of wire telegraphy. The term "ham" was given to implicate a showoff or rogue - much in the same way as it is used today outside radio. It is probable that the first amateur radio morse/cw operators were in large part the same people that were labeled 'hams' on the wire. These people found enjoyment in cw/morse and carried the skill to their more social implications. This use of a comman wire may have appeared to be showy and flamboyant to those who used the telegraph for only work purposes.

Also, who does not like to demonstrate their skill and toys for others? Do you know a ham that does not like to show off his new radio or brag of a rare QSO? Before I was a ham, every ham I met showed me their rigs before I met their wives or children.

Or it could be named after Ham - son of Noah and brother of Shem and Japheth. :->

: >a voluntary enterprise intended to advance the public and national interest
: >as outlined in the charter of the amateur radio service in Part 97.1.

: You know, if the only aspect of amateur radio that is considered "for the public
: good" is that which the public can see directly, i.e. emergency operations,
: then we might as well turn over our bandwidth for auction.

: IMO, the main benefits of amateur radio are not from the occasional hurricane
: net, but from the education in an otherwise esoteric trade that all amateurs
: get in order to pass the license test and get a station on the air.
: Experimentation can take place in the ham bands, unlike the crowded commercial
: and gov't bands. How many RF engineers cut their teeth on amateur
: communications, and how many use experimentation in the ham bands to push their
: skills in the for-profit bands? Even the tech-lites can set up a station, check
: it for proper operation, and know where to get more info. if they run into
: problems like TVI. Joe Cop probably couldn't tell a PL-259 from a BNC, but I
: bet most tech-lites could check his SWR for him.

: I think it's rather short-sighted to look only at emergency nets to find the
: benefits of amateur radio.

: -Tom R. N1OOQ randolph@est.enet.dec.com

Tom, I think you are right about the training ground that ham radio provides,
but I'd like to add another insight here:

There are emergencies and emergencies. I helped a woman who was stalled
at the side of the road by calling first AAA to come and tow her car, and
then her boss to tell him she would be late. I was at home, and a fellow
ham was at her location relaying the info I needed.

Now, that was only an emergency to her (and perhaps to her boss), but I
like to think I reduced the likelihood of a more serious accident by
promoting the timely towing of her car, and perhaps I helped her keep her
job.

On another occasion or two, I was the first to notify authorities of
an accident, using my trusty HT and a local repeater. Where were all
the cell phone owners in those instances?

My point? Hams can provide communications at a moment's notice that can prevent emergencies from occuring, or from getting worse. None of this has much to do with communications in a more general emergency. This sort of "emergency" communication is also a benefit that is mostly invisible to the public, but is the sort of thing that I think hams as a group are primed by their shared ethos to engage in, more than the general populace (their cellular phones notwithstanding).

Neil KE6NCX
nfullagar@ccgate.apl.com

==========

The following are available from UCSD. See below for sub/unsub
instructions. Except where noted, descriptions are are given from
the 'longindex' command.

ham-ant
Bidirectional mailing list with Usenet group rec.radio.amateur.antenna

ham-atv
Amateur Radio Fast-Scan Television

ham-bsd
A discussion group for people interested in ham radio applications of
the Jolitz 386BSD software.

ham-digital
Bidirectional gateway with Usenet newsgroup(s) rec.radio.amateur.digital.*

ham-equip
Bidirectional gateway with Usenet newsgroup rec.radio.amateur.equipment

ham-homebrew
Bidirectional gateway with Usenet newsgroup rec.radio.amateur.homebrew

ham-policy
Welcome to Ham-Policy!
You are invited to send comments and queries regarding Ham Radio regulations,
the future of ham radio, and related subjects to Ham-Policy@UCSD.EDU

The mailing list is in the form of a digest. It is not edited, just a
convenient envelope for multiple messages to reduce netmail load.

ham-radio
The HAM-RADIO mailing list is an experimental digest using subject grouping and MIME encapsulation to provide a daily dose of ham radio related traffic from the Usenet.

The software that creates this digest is continually changing as I fiddle with it. It's an experiment, and it may well break at times.

But if you want to hang on for the ride, feel free to subscribe.

Comments to Brian@ucsd.edu, please.

****
KE6NCX's note: I've been subscribed to this one for a while, and have had about one message per month... Eventually I wondered what I was missing, and found out what other lists there are.
****

info-hams
Welcome to Info-Hams!
You are invited to send comments and queries regarding Ham Radio operation and related subjects to Info-Hams@UCSD.EDU

The mailing list is in the form of a digest. It is not edited, just a convenient envelope for multiple messages to reduce netmail load.

Note to PC-LAN mail users: Most of these mail systems are not mature enough to participate in the internet. They are bad neighbors and do stupid and hostile things like return undeliverable mail to the entire mailing list. If you are a user of such a system, I'd really rather you didn't subscribe unless you are SURE you have software that won't shit all over everyone else's mailboxes. Thank you.

ham-space
Bidirectional gateway with Usenet newsgroup rec.radio.amateur.space

ham-uwave
Mailing list for the discussion of Amateur Radio Microwave experimentation - generally, frequencies above 1,000 MHz.

packet-radio
The packet-radio mailing list; gatewayed to/from the USENET newsgroup alt.ham-radio.packet.

To subscribe to the lists above, or unsubscribe, send mail to "listserv@ucsd.edu". The suibject may be left blank. In the body put 'sub ham-policy' or whatever list name you want.

==========

These are the ham-related mailing lists available on Netcom. For more info on any of these, send a message with 'info barc-list' in the body. (Replace barc-list with any other list you want info on.)

To subscribe to a list, send the following command in email to
"listserv@NETCOM.COM":

subscribe listname

arrl-exam-list: amateur radio license examinations scheduled in the US and
in some foreign areas.
arrl-nediv-list: bi-monthly bulletins from the ARRL NE Division director
arrl-ve-list: Info for ARRL VEs from the VEC
barc-list: Information, discussion and anouncements for the Boston Amateur
Radio Club and hams in Eastern Massachusetts.
qrp-l: Low-power radios - construction and operating
w1aw-list: ARRL bulletins, news, and information
newsline-list: Redistribution of Amateur Radio Newsline
letter-list: Redistribution of the ARRL Letter
barc-races: RACES in Massachusetts and emergency management
fox-list: Fox hunting and Radio Direction Finding
ky1n-list: VE exams in New England
fieldorg-l: ARRL field organization discussions
ham-tech: Technical discussions and questions about Amateur Radio

==========

The following is available from cycling.org:

Info regarding the BikeHam Electronic Mailing List
Submitted by: Wayne Day <wday@dfw.net> Jan 1, 1995

The BIKEHAM@CYCLING.ORG mailing list is chartered for the discussion
of topics related to amateur radio, also known as "ham radio", and
bicycling, such as operating a ham radio station while bicycling or
using portable equipment transported by bicycle while touring. Also,
information about the Bicycle Mobile Hams of America (BMHA) will be
available through this list. Further info about this list may be
obtained from Wayne Day, KF5ZC, wday@dfw.net or
76703.376@CompuServe.Com

All administrative actions for the BIKEHAM list (such as routine
subscribe/unsubscribe requests) are handled automatically by way of a
special e-mail address on the list machine, namely:

majordomo@cycling.org

You ask Majordomo to perform various tasks on your behalf by sending
e-mail to the address above containing one or more appropriate
commands as listed below. Note that the commands must appear in the
BODY of your message since the Subject line is ignored, and that the
last command in any request should be the END command (this prevents
Majordomo from attempting to interpret any signature lines you might
have at the end of your message).

Command Result
------- ------

SUBSCRIBE list-name Put your address on `list-name'
UNSUBSCRIBE list-name Take yourself off `list-name'
END Stop processing commands (useful for
preventing Majordomo from interpreting
your signature lines as commands)

>>as well. It implies we're some kind of inexperienced beginners.

>I agree.

>What about using the term 'licenced radio operater'.

Since the poster is not alone in being unable to spell "operator",
and the spelling of "amateur" is beyond many others (amatuer,
amature and other perversions abound), I have finally realized that
the origin of "ham", whether in capitals or not, is that it is the
longest word that most radio amateurs can spell correctly.

Those who have not progressed to joined-up writing print everything
in capitals, thus HAM, while those with post-kindergarten training
often manage to write "ham" in cursive script. Anything longer
is just too taxing.

: their 2x3s.

HUH??? I am a student of callsigns and I can NEVER remember 1x3's being
"given" out to ANY class of license (of course excepting the original
W's and K's).

I believe that you are confusing that prior to 1977, you had to be a
ham 25 YEARS to qualify for a 1x2 call as
a distinction. Then, they allowed ANY ham with an extra to get a
distinctive 1x2 call.

I do completely agree that it was foolish for the FCC to allow
tech-lites to get Nx3 calls. They should have been reserved for General
and above. Of course, I thought it was stupid for the FCC to create
incentive licenses in the first place.

Gee, John, you should have asked me before you bought one. I could have discouraged you, or else sold you one :-). My wife and I have two of them, one in each car. Both have been back to Kenwood, and neither was improved as far as I could tell. I usually run mine in VHF/VHF mode, and it's bad on the second unit even in VHF mode. There are parts of town, and areas on my commute from a rural area to town where the radio is unusable.

I'm sufficiently disgruntled that while shopping for a consumer electronics device a while back, I wouldn't even look at any of the Kenwood products.

If anybody knows of any real fixes, I'd be happy to hear about them, too.

The cost for such plates are running $21.00 right now. I have a feeling
that there is also a monthy or yearly charge too. I don't know what
that is, however.

Long before the word "ham" came to have the connotation of one who is a show off or strutter, it meant an amateur performer of any sort, especially one who was inexperienced or bungling.

The most likely explanation is that early amateur radio operators were called "ams". Because of association of meaning with the slang word "ham" or the appearance of an intrusive "h" (or both), the pronunciation changed from "am" to "ham".

This is the explanation that was commonly given 40 years ago when I first started reading about shortwave radio and hams. I suspect that the great William of Occam (+1349) would have come to the same conclusion using his method of "Occam's Razor" to examine the question: Entia non sunt multiplicanda praeter necessitatem. (Free translation: keep it simple and go no further than necessary.)

323. Why are we called HAMS???

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-07 01:50:55 UTC
From: wa1lbp@transend.com.tw
Message-ID: <3eks1v$1ud@transend.com.tw>
Source record: 253820

I came across this explanation of the word ham several years ago on packet. Seems plausible. I admit I never did the homework to check it out. This story could probably be checked out using some old NY Times index and microfilm of the NY Times from around 1912... or by a check of the Congressional Record for the same period.

Here it is:
WHY RADIO AMATEURS ARE CALLED " HAMS "
From Florida Skip Magazine - 1959 Have you ever wondered why radio amateurs are called "HAMS " ? Well,it goes like this: The word " HAM " as applied to 1908 was the station CALL of the first amateur wireless stations operated by some amateurs of the Harvard Radio Club. They were ALBERT S. HYMAN,BOB ALMY and POOGIE MURRAY. At first they called their station " HYMAN-ALMY-MURRAY ". Tapping out such a long name in code soon became tiresome and called for a revision. They changed it to " HY-AL-MU ", using the first two letters of each of their names. Early in 1909 some confusion resulted between signals from amateur wireless station " HYALMU " and a Mexican ship named " HYALMO ". They then decided to use only the first letter of each name and the station CALL became " HAM ". In the early pioneer days of unregulated radio amateur operators picked their own frequency and call-letters.Then,as now,some amateurs had better signals than commercial stations. The resulting interference came to the attention of congressional committees in Washington and Congress gave much time to proposed legislation designed to critically limit amateur radio activity. In 1911, ALBERT HYMAN chose the controversial WIRELESS REGULATION BILL as the topic for his Thesis at Harvard. His instructor insisted that a copy be sent to Senator DAVID I. WALSH , a member of one of the committees hearing the BILL. The Senator was so impressed with the Thesis that he asked HYMAN to appear before the committee. ALBERT HYMAN took the stand and described how the little station was built and almost cried when he told the crowded committee room that if the BILL went through they would have to close down the station because they could not afford the license fees and all the other requirements which the BILL imposed on amateur stations. Congressional debate began on the WIRELESS REGULATION BILL and little station " HAM " became the symbol for all the little amateur stations in the country crying to be saved from the menace and greed of the big commercial stations who didn't want them around. The BILL finally got to the floor of Congress and every speaker talked about the " ...poor little station HAM That's how it all started. You will find the whole story in the Congressional Record. Nation-wide publicity associated station " HAM " with amateur radio operators.From that day to this,and probably til the end of time in radio; An amateur is a " HAM ".

Hi Tony,

It would help a lot if you could be more specific. For instance:

What kind of training have you got?

What bands and modes are you thinking about?

Are you aware of the fact that the difficulties associated
with receivers and transmitters are (to say the least) different?

If you can tell me what you have in mind, I will do my best to help
you.

You can reply thru the group, or directly. 73 de VE2GTP.

Then follows the Hyman/Almy/Murray story with the Harvard Radio Club
connection.

This story is false, but it doesn't want to die. Several years ago John
Huntton, W1RW, one-time General Manager of the ARRL in Newington, actually
got copies of the Congressional Record for the period. John read through
stacks of paper, page by page, and was unable to find any record of the
testimony. John also contacted the Harvard Radio Club, and they were
unable to verify the story. John's letter describing his search appeared
several years ago in the QCWA Journal. I haven't been able to locate
that specific issue, but I did call john on the phone a few months
ago to verifiy my recollection of the QCWA letter describing his
search and his findings. My recollection was correct. According to
John, the story has no basis in fact.

Last July, while at ARRL HQ, I asked if the Congressional Records that
John had gone through were still there, in storage. They're not, so there's
no easy way to verify John's old work, Perhaps someone out there with
access to a good library with Congressional Record microfilms would like
to run through it all again.

I agree....I live 40 miles north of downtown Houston....and TV 2 is the NBC affiliate here...I operate 6 FM with little problems....in fact ran a test at my previous house on 6 with 30watts and swept the band from 50-54 with a TV watching TV 2 in the same room on cable that ran RIGHT below the 6mtr antenna. No problems except at ONE freq....I think it was 50.17 and Im not sure WHY! Other than that I NEVER bothered any neighbors or my own TVs on Channel 2.. Thanks to Cable TV and better tuners (not much though!), TVI on 2 can be a thing of the past for those who operate 6...

329. This Week in Amateur Radio...Ham News For Your Repeater..Edition #93

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-07 04:36:17 UTC
From: kxkvi@delphi.com
Message-ID: <xU5Zw5p.kxkvi@delphi.com>
Source record: 253826
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Here is a summary of news items covered on Edition #93 of "This Week in Amateur Radio", North America's satellite-delivered audio bulletin service, for the week ending 13-Jan:

1. IARU Names Its First Satellite Frequency Coordinator
2. Canadian Amateurs Await a New Federal Policy on Antenna Structures
3. New Amateur "SUNSAT" Satellite Being Designed and Built in South Africa
4. AMSAT-UK Officer Knighted by Her Majesty Queen Elizabeth II
5. South African Radio League President Awarded Honorary Engineering Degree
6. "This Week in Amateur Radio" to Move to a Different Satellite
7. "The RAIN Dial-up" from Chicago
8. Upcoming Special Event Stations with George Bowen, N2LQS
9. Amateurs Worldwide Report on Performance of New Russian RS-15 Satellite
10. "EZSATS" with Bruce Paige, KK5DO
11. Weekly Propagation Forecast
12. Frequency Values Increase as Current FCC Spectrum Auction Continues
13. "Gateway 160 Meter Net Report" with Vern Jackson, WA0RCR
14. "Amateur Radio Newsline" - Edition #908 from Los Angeles

Transmission and uplink costs were funded by the Columbiana City Amateur Radio Club of Ohio.

"This Week in Amateur Radio" is a weekly amateur radio news and information service, in audio newsmagazine format, which is produced by Community Video Associates, Inc., a non-profit, charitable, tax-exempt foundation based in Albany, New York. The program is carried on the "Omega Radio Network" each Saturday at 7:30 PM (EDT) on the Galaxy III commercial communications satellite, transponder 17 (9H), 5.8 MHz wideband audio (4.040 GHz), located at 93.5 degrees west longitude in geosynchronous orbit, and can be heard on various VHF/UHF repeaters throughout the United States and Canada, as well as on 160 meters at 1860 kHz. Contact your local amateur radio club or repeater operator if "This Week in Amateur Radio" is not being heard in your area.

Production and transmission expenses are underwritten by contributions from repeater system operators, amateur radio clubs, and individuals. For further information, contact George Bowen, N2LQS, at 518/283-3665. You may also reach N2LQS or WA3RKB via amateur packet @ WA2UMX.#ENY.NY.USA.NA and on various landline bulletin board services, including the Internet contact KXKVI @delphi.com.

Welcome to the wonderful world of wideband scanners. :-(

Tucker Electronics sells a helical filter set that's RF switched,
like an external amplifier in reverse, which may solve your problem.
It restricts the RF entering the receiver to the ham band. Pity
Kenwood didn't design the radio that way.

>I don't know where to start .. Can anyone tell be where to start ...
>Any help is wanted ...

Tony, depending on your present skill level and ambitions, you may want to start with a kit. There are several small kitmakers out there, consult the advertising sections of any of the ham magazines. Hamtronics, Ramsey, and others offer FM VHF/UHF kits of varying quality, and outfits like Oak Hills Research offer HF CW kits.

Heathkit is gone, so don't expect a lot of handholding with current kit manufacturers. Ten-Tec is also beginning to produce a line of kits, and they may be the best, but delivery is currently slow.

If you really want to scratch build, there are projects in the ARRL Handbook and the various amateur magazines. Or you can design your own equipment using the information in books like _Solid State Design for the Radio Amateur_ by Heywood, or Chris Boswick's _RF Design_. The Handbook can also be helpful here. Every builder should accumulate a good technical library. That's basic.

Or finally, you can use the information in application notes from some of the device manufacturers. Motorola offers a line of communications ICs and transistors that are suited to RF projects and their application notes are quite useful. Single chip transmitters and receivers are practical for low power work. I'd recomend the MC2833 FM transmitter IC and the MC13135 FM receiver subsystem IC as the basis for a simple VHF FM transceiver. You can follow that with one of the RF hybrid amplifier ICs for a respectable signal.

Note: access to some test equipment is very useful. Besides the standard multimeter, access to an oscilloscope, a known good communications receiver, a signal generator, and a spectrum analyzer are helpful. You don't have to own all of that yourself if you can find a friend who has them. If you continue to build, however, you'll want to get test equipment of your own. Older surplus equipment will do fine, and won't run the multi-kilobucks that new test equipment can cost. You can also build some of your own test equipment.

Chambers links "ham" meaning radio amateur with " ham" meaning an actor
who rants and overacts, and suggests a derivation from "hamfatter, a
third-rate minstrel", from the days when white minstrels put ham fat on
before blacking up with burnt cork. Would the dates have been such
that this could have applied to telegraph operators?

: >problems on the 440 band for the Kenwood 732? My older 701 doesn't

[snip]

I mailed mine back to Kenwood within the warranty period. They de-tuned the UHF front end (or so I was told) and that cured it (more or less... in any event, it was vastly improved to the point where I could drive around with UHF on and NOT hear, "Paging Dr. Fine, Dr. Howard, Dr. Fine")

It does not seem to have reduced in-band UHF rcv, either.

Why does this story keep popping up time after time?

Ok campers, this is the straight scoop from ZjL so listen in...

Q: Why are ham radio operators called "HAMS?"

A: Go to any Dayton Hamvention (largest gathering of "ham" operators on the planet at any one given time). It will be raining (guaranteed). Walk into the main arena, where Kenwood, Icom, and some other big players are set up. Wait until the Hamvention folks decide to pull some door prize numbers... ideally, this should coincide with a Kenwood *AND* ICOM "free pencil (or similiar gimmick)" giveaway. That chain of events will place about 30,000 "hams" in the arena simultaneously.

Now, take a nice, long deep breath. After you finish gagging, what are you reminded of? PIG FARM! What's another name for pig? Ham.

Any questions?

345. Beacon/pirate or neither?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-07 15:05:00 UTC
From: tom.hammond@woodybbs.com
Message-ID: <93.20675.7585.0NFB8AD2@woodybbs.com>
Source record: 253739

Greetings from snowy mid-Missouri:

Last night (01-06-95, ZULU TIME!) I had a young (yeah!) Tech Plus over in my shack, helping him work on his CW proficiency... working toward General and getting ready for the Novice Roundup at the end of the month.

Around 0300Z, as Tim tuned through 80M he found a relatively decent signal (copiable by a beginner) on 3712.1 kHz. The station was sending (repetitively) "CQ CQ CQ DE SXA 33 SXA 33 SXA 33 K" (it may have been sending "VVV's" instead of "CQ", I forget, but I _do_ know the call was SXA 33).

I'm just curious to know if anyone knows anything about this station. I'm not worried if he's a pirate or not... he'd be just one of many, but I'ld like to know where the signal originates and what it might be. Thought it might be a foreign 'shore' station in the marine service, but it wasn't sending the normal "QSX (frequency)", so I'm not sure what it's intended use it.

And ideas or hard info would be most appreciated.

I have a friend with a Tropez 900DX cordless phone. The audio coming out of the handset is weak even at the highest adjustable setting. The audio for the base when used in speaker-phone mode is fine. He's wondering if there is some adjustment pot in the handset or base to increase the volume. He doesn't want to get inside it until he knows there is something he can adjust. If you know how, or know a better group to pose this question to, I'd appreciate any replies.

Hi. You can easily hear these birds in advance of AOS because their 10 m downlink is affected by the F layer and will easily bounce thru hit the earth reflect upwards and downwards again....almost a double hop. I have heard this many times. Check the first LOS rather than the AOS. You can get a second LOS the same way. Hope that helps. Joe KO4EI

355. Can you phone FCC for upgrades, too?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-07 21:14:19 UTC
From: Tommy the Tourist <nobody@csua.berkeley.edu>
Message-ID: <3en07b$k44@agate.berkeley.edu>
Source record: 253752

I understand the implication that newly passed candidates can phone the
FCC and get their new callsign and operate with it immediately (re the
Dec 20/94 effective rule change.)

Does this also imply that since I upgraded to Advanced (of _course_ I
checked and initialed the new callsign box :-) that I can phone the
FCC and get my new callsign and operate with it?

BTW, has anybody had much luck with the FCC 800-322-1117 number? The
first time I tried it I got a recording that all staff were in a meeting
and that switched to an automated attendant (press 1 to QRT your call :-)
The next time it was a recording that the offices were closed and again
the automated attendant. The next time the phone was busy for 20 minutes
solid.

73 DE N1QNK (tba K?1??)
Jim

PS - if a tagline follows, it was not added by me.

Did you get that MAK-91. My friends and me picked up a Browning
automatic. I also found a 75-round drum magazine and a pistol-grip
stock. It's killer. There's this machinist who is willing to do some
Class III work.

357. Debunking the "little station HAM" story

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-07 22:13:29 UTC
From: William=E.=Newkirk%Pubs%GenAv.Mlb@ns14.cca.rockwell.COM
Message-ID: <199501072232.OAA24316@ucsd.edu>
Source record: 253770

the claim is made:

>Congressional Record. Nation-wide publicity associated station " HAM "
>with amateur radio operators.From that day to this,and probably til the
>end of time in radio; An amateur is a " HAM ".

by citing:

>WHY RADIO AMATEURS ARE CALLED " HAMS "
>From Florida Skip Magazine - 1959 Have you ever

first question -- was this the April issue?

point - if FL Skip then was like it is today, the editors and publishers would have tended to print it all without much research into credibility. No by line in the current version quoted this time around...

Also consistant with UL's is the "you can look it up" claims w/o telling where except in the most global of terms.

another point: if there was nationwide publicity, you'd think some of it would have survived to this day..a feature in the Handbook..even old ones - since it's not that long ago when all this was to have taken place. you might think that something this monumental would have had some lasting presence in the literaure...(the ARRL shoulda got W1HAM f'instance rather than W1AW...right?)

has there been a Senator DAVID I. WALSH? in 1911?

did the people involved in "little station HAM" (ALBERT S. HYMAN, BOB ALMY and POOGIE MURRAY) exist? would seem like there should be a yearbook at Harvard and probably scanning from say 1905 to 1915 would net information about these 3 guys...(poogie?? that's a name?)

was there a 1HAM and W1HAM that could be traced back to this time?

of course, even tho this could all be done and the story sent to the morgue, someone would run across one of the claims and restart the whole thing all over again...

>or mail them to ....

You can run, but you can't hide from me, Paul Gilbert!!!

If you don't mind code written in QuickBASIC (actually Mircosoft BASIC
7.1) you are most welcome to pick them out of the FC/RG software which I
know you are aware of. For that matter, you can use it as-is if you
wish (see my msg to you on NRDB).

I'll be happy to provide you with the QuickBASIC source code if you want
it. It's got all the algorithms there for you to do with as you wish.

>
>Any help would be appreciated.

I second the vote for "The Complete DX'er." An excellent book, one that inspired me to seriously pursure DX about 6 years ago. I've never regretted it.

In addition, I've seen ads for a book called "Secrets Of Successful QSL'ing" in the classified sections of the major ham magazines, but I've never read them.

Finally, GET ENVELOPES ON FILE WITH YOUR INCOMING QSL BUREAU. This point cannot be overemphasized. You will receive many cards that way, even though it takes a while for the bureau system to work.

Good Luck,
Sean

Content-Type: TEXT/PLAIN; charset=US-ASCII

ATTENTION:

As a Ham radio licensee living in Florida. I cannot see how the ARRL let this issue reach the point it has.. Clearly you should have been notified that this case was before the courts.. If this was done and the league did not step in with some of it's high powered muscle before it reached this point. I am a little dismayed at that fact. Granted I do not know the particulars in this case. So this is more query than acusation. I feel personally that "WE" the people who are going to be most affected by these types of rulings have to make sure they are made in our favour. I would ask three questionsif I may. 1.What is the league planning on doing in this case? 2.Why was this not straightened out earlier?3.When are we going to make a forceful enough case to the FCC. To get a written standard to put a stop to this type of "harrasment" by the locals. Hey you would think that as much as we do in the case of public service for States like Florida.That they from the Governor on down would make sure we in the Amateur Radio community werenot *troubled* by this type of garbage once and for all.

Course as a new type of tactic.WE could give the state of Florida a real choice. The next Hurricane like Andrew or Gordan. We will refuse to play with them. Sounds like that would bring the whole thing to a halt in a big hurry.

Please refer to my three main questions and I would like a list of people and address that I may forward a copy of this letter to.

Sounds like a great arguement to me Bill! Do you think a national organization like the ARRL to name one would take on the obligation to upgrade our networking abilities? >
Personally I can't think of an another avenue to tackle the problem, but would the members nationwide support such an uptaking and support the major increase in league dues.

In our little area of the Ohio Valley, we have about four clubs that help support the local pbbs here, but it of course is more on the open bowler type that you have likened them to. One particular club that I belong to has various funds for each activity of the club, but I cannot say that we have a pbbs packet radio fund, whereas we do have a repeater fund for the upkeep of our two club repeaters and a report is made each month in our national bulletin. The repeater fund receives almost adequate attention, and we are currently attempting to locate and build at a new site. Our previous #1 site was owned by TCI (whom originally agreed to sell the club the tower and land upon their abandonment of the site) now they have backed out and we are to find a new location, and buy a new tower, plus reconstruct the present repeater. The outpouring from requests during our weekly Amateur Radio News Nets provided more than half of the needed committment to move the site.

I recently read an article that I found on packet from a fellow complaining about the very medium his words were printed through. His comments were those of your open bowlers hihi, he thought that the sysops were not urged by others to place their nodes and pbbs on the air waves and should not be there for that it was solely the sysops responsiblity

and they should not seek help from the amateur community.

Well I guess I need not explain that I for one was appalled and sent my thoughts as allusa. I very much appreciate our sysops and amateur communities that provide pbbs's, nodes, and repeaters and send all of them in my area contributions when I am able to do so, both through the club and as an individual.

It would be a very costly endeavor to attempt upgrading our present pbbs system and could only be done through a large organization, such as the ARRL, but we as a fraternal organization would have to give till it hurts.

Could we imagine nationwide packet at 9600 baud?

My turn to quit for a spell 73 to all.

Hi Jim, IMO the most probably origin of the word ham for amateur
is the English theater long before radio was invented. "Hamming
it up" predates radio. Amateur actors were known as hams and it
is logical for any kind of amateur to be called a ham. Back in the
50's, my Elmer told me it had to do with the cockney way of pronouncing
ham. 'am... 'amateur.

Good grief we may as well be cber's with a license, well they used to
kinda sorta be right.

I am a general class license and don't want the rest of the freqs handed
to me, but rather want to earn them. I started as a novice and upgraded
to the present "CLASS" of license.

I suggest you find the country that is modeled after your design and buy
a permanet home there.....only kidding Gary. We're all entitled to our
opinions hi.

Almost the same experience here Paul, I had both of mine "detuned" (VHF & UHF) and the paging intermod was significantly reduced. I still have some problems on 440, but not as much. I also haven't noticed much of a decrease in sensitivity (on simplex).

73,
Neil - WH6FD

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.
```

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (10/94)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Send Questions to the Newsgroups, Not the Editors (9/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)

Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html
file://rtfm.mit.edu/pub/usenet/radio/ham-radio
all radio FAQs & info:
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/top.html
wais://rtfm.mit.edu/usenet/radio
Federal Communications Commission:
http://www.fcc.gov/
http://www.fcc.gov/1/Private_Radio
North Carolina State HamRadio WWW Server:
http://www.acs.ncsu.edu/HamRadio

Yahoo's Ham Radio Index:
http://akebono.stanford.edu/yahoo/Entertainment/Hobbies_and_Crafts/Amateur_Radio/
EINet Galaxy's Ham Radio Page:
http://www.einet.net/galaxy/Leisure-and-Recreation/Amateur-Radio.html
O'Reilly's Whole Intrernet Catalog's Ham Radio Page:
http://nearnet.gnn.com/gnn/wic/hobbies.02.html (Eastern USA)
http://www.digital.com/gnn/wic/hobbies.02.html (Western USA)
http://bond.edu.au/gnn/wic/hobbies.02.html (Australia)
http://quasar.sba.dal.ca:2000/gnn/wic/hobbies.02.html (Eastern Canada)
http://www.wimsey.com/gnn/wic/hobbies.02.html (Western Canada)
http://www.Germany.EU.net/gnn/wic/hobbies.02.html (Germany)
http://www.ntt.jp/gnn/wic/hobbies.02.html (Japan)
http://www.elvis.msk.su/gnn/wic/hobbies.02.html (Russia)
http://src.doc.ic.ac.uk/gnn/wic/hobbies.02.html (UK)
University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for
CAP radio information, these rec.radio.amateur.* groups are available.
CAP-related files are also stored on the FTP site
sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK,
10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter
band. It was first conceived when propagation was poor on 10 meters,
as a method to get more hams to use 10 meters. The past few years
have been great for 10 meters worldwide. However, "the bands are
closing down" again, and 10 meters will once again be limited more
for local communications, except for sporadic band openings, until
the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call
sign, operator's name and location. Send the list to your numeric
call sign or DX area manager (as shown below), with $5.00 U.S. new
membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent
required under age 17), be a US citizen or resident alien, possess a
valid Amateur Radio license, possess a station capable of operating
on MARS HF frequencies, and be able to operate the minimum amount
of time for each quarter (12 hours for Army and Air Force; 18 hours
for Navy-Marines). Novices must upgrade to Technician within 6
months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently--created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

382. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-08 06:12:38 UTC

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit.
Tone decode refers to the feature of responding to the tone on receive.
Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860

KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

383. callsign servers

> KE6PRL.
>

A few years ago when I got mine, it was a single-time charge. You have to use a DIFFERENT form than for the "environmental" plates- I think it's DMV form 441. If they try and enter your callsign into the "environmental" plate part of their computer system, you get back a message that the requested plate is invalid- the system's way of reserving ham (and aero) designations.

I got my ham plate mainly because I could read the fine print in the DMV manuals upside down better and faster than the DMV employee could right side up.

When you show up to order your ham plate, remember to bring the car it's for, and the registration, as well as a copy of your license. Patience helps. Remember: you can't push a piece of string.

I think you are mistaken as to the history of the callsign assignment
system.

>73 all de Andrew, aa1hx (formerly wb1afx)

If you really want a 1x2 or 1x3 just wait a few months. There is
a system in the works so you will be able to buy a vanity callsign.
According to my cd-rom, w6afx is not taken, if you really want the
"old-timer" badge of distinction.

Ray, that country was the United States of America prior to 1968.
The General class had full priviledges. It was the basic license
of most amateurs. There were some Techs, but their test was the
same as the General except for an irrelevant difference in Morse
speed testing. And there was a very limited Novice class, with a
test insufficient to ensure their legal, safe, and non-interfering
operation. I'm suggesting a return to a single basic license,
eliminating the irrelevant Morse speed test, and eliminating any
license class with insufficiently demonstrated skills to operate
legally, safely, and without causing interference to other services.
I've outlined what I think the content of that exam should be in
another message.

I wonder if a restricted list of calls existed in earlier days. Certainly some of the no-no calls were issued at one time.

When I first got into radio as a teenager in the 1950s, one of my inspirations was W1LID, who lived about a half mile from me and operated on 20 meter phone. I enjoyed listening in on his QSOs on an old Philco BC+SW receiver my folks had had since the late 1940's.

I heard him joking about his call, he didn't seem to mind it. As far as I know it didn't describe him at all. When I finally got my novice license one of my friends and I finally got up the courage to to go visit him. He gave us all sorts of valuable stuff, including a wonderful multi-tap modulation transformer I never could have afforded to buy new. When I finally got my general that transformer got me going on a.m.

My first call was KN1BOW/K1BOW (this was back when you could get novice and technician licenses simultaneously). I had the pleasure of meeting K1BOX at a hamfest a few years ago. He still has his original call, issued the same day in 1957 as my own.

Yeah, but don't forget that FAA rules explicitly prohibit the use of any
transmitter during IFR operations unless the equipment has specifically
been approved by the FAA for use during IFR.

IFR is mandatory anytime above 18000 feet MSL, and since most carriers fly
IFR virtually all the time, this means no transmitting! I have a 2M rig
in my Cessna. We had to install a placard near that radio that reads:
"Not to be used during IFR flight".

As for receiving, or using Walkmans, I'm sure most of that is liability
concerns on the part of the airline. Cell phones are specifically
prohibited by the FCC from being turned on (since they transmit when your
not using them) any time the "wheels leave the ground".

Don't they still allow the use of laptops while in flight? I cant
remember, but it seems to me they do, which is real interesting. I've
seen some pretty noisy laptops, that perform better as transmitters then
they do as computers, hi.

SB DX @ ALLBBS $OPDX.189
Ohio/Penn DX Bulletin No. 189

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 189
BID: $OPDX.189
January 9, "1995" (Got it right this week! hihihi..)
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, ARRL DX Bulletin, AD1C, WB2RAJ, K4CEF & Southeastern Cluster Group, KE4LWT, WA6IZT, ON6TT, SM3CVM, VS6WV, DF4RD and DL7VEE the DXNL for the following DX information.

4U50UN, UNITED NATIONS HQ. The station 4U1UN will be signing 4U50UN throughout the whole year of 1995 to celebrate the 50th anniversary of the United Nations which was established in 1945. 4U50UN was heard on January 1st on 30 meters around 2045z, 7009 kHz around 2200z and 3787 kHz around 2315z. QSL "ONLY" to W8CZN or WB8LFO.

5A, LIBYA. European PacketClusters have reported activity from a station signing F5HV/5A or 5A/F5HV/M. The operator Jacques was reported active on 14120 and 14140 khz. There has been some indication that this station may be part of a support team for a rally. This station also indicated that he would be active soon from 3V-land (WFWL!) QSL via F5PFP.

7S3OWG, SPECIAL EVENT STATION IN SWEDEN. Just a reminder to begin looking for this station, which is trying to promote Sweden as a possible candidate to hold the Olympic Winter Games in the year of 2002. Activity will be January 1st until June 16th. The station located in Ostersund will mainly be active on CW but there will be some activity on the other modes and some participation in major contests. QSL via SM3CVM or bureau.

A3, TONGA. Paul, KK6H, continues to be active as A35RK until February 7th. Most of his operations are on CW between 160-30 meters, but he has been heard on 15 meters. Paul was heard this past week on 40 meters CW around 0700z and again at 1130z. QSL via KK6H.

BV, TAIWAN. Gregg, WA6IZT, will be operational as BV/WA6IZT from January 14-17th. He will mainly be concentrating on the low bands and CW. He will attempt to be active each day from 1100 to 1500z to work North America. Operating frequencies will be 3005, 7005, 14005 kHz (+/- QRM). QSL to his home call CBA 94 or later.

HQ, CAYOS COCHINOS, HONDURAS (NA-160). A few Hondurran operators will be active from here as HQ6DX, starting around 1400z January 13th to 1400 or 1500z January 15th. This island is located in the Cortes/Atlantida Department Group. The operators will have 2-3 stations active on the usual IOTA frequencies. QSL via HR2JPQ.

HV, VATICAN. Brother Edward, W9SI/OA4SS, will be active from the Vatican City between January and March. It was mentioned that he will possibly use or be active with the callsign HV3SJ. His work as a an interpreter may limit his activities, but look for him between Monday and Friday from 1400-1530z and 1930-2300z. On Saturdays, look for him from 1400-1830z and 1930-2230z, and on Sundays from 0800-1130z, 1430-1830z and 1930-2230z. QSL via I0DUD.

OJ0, MARKET REEF. Just a reminder that Pete, N0AFW, will probably be visiting here if transportation can be arranged and the weather can cooperate. Pete will sign as OJ0/N0AFW for a few days between January 10-15th. He plans to operate mainly on the WARC bands and lower bands.

ST0K AND ST2AA QSL CARDS UPDATE. Dick, WB2RAJ, QSL Manager for these two stations, reports he has only received the logs for ST0K for the period of October 26, 1993 through December 5, 1993. He has not received any logs for ST0K for 1994, nor has he received any logs for ST2AA whatsoever. Dick states Lou (ST2AA) has promised to send the logs and has given him the "OK" to have the QSL cards printed. The cards will be printed by early February, and Dick will start sending out the cards for ST0K from the logs that he does have. Dick appreciates everyone's patience especially from those who have sent for card requests and he hopes Lou will send the other logs soon.

T31, CENTRAL KIRIBATI. Nobert/DF6FK and Judith/DL2ZAD signing T31BB and T31BA, respectively, will be finishing up their stay on Canton Island, January 15th. There have not been very many QSNs reported on these two, but T31BB was heard 3803 kHz around 1307z. QSL via CBA or bureau.

TG, GUATEMALA. Jack, KE4LWT, will be operating from here starting sometime in late Janaury or early February through the middle of June. He has not received his callsign from TG authority yet. Jack will primarily be active in the evening between 0000-0600z in the U.S. Novice Sub-bands (especially 80 and 40 meters).

VP8, SOUTH GEORGIA ISLAND. Al (WA3YVN), Jan (WA4VQD) and Vince (K5VT) are now active from Grytviken as VP8SGP. Activity will last until January 20th. The team will operate on all bands with an emphasis on CW and the lower bands. Suggested frequencies:
CW - 1826, 3522 (3504 for EU), 7022 (7004 for EU), 10104, 14024, 18074, 21024, 24894 and 28024 kHz
SSB - 1845, 3785, 7065, 14195, 18145, 21295, 24945 and 28475 kHz
RTTY- 3580, 7040, 14080, 21080 and 28080 kHz
QSLs will be handled by W4FRU, INDEXA, POB 5127, Suffolk, VA 23435.

VS6, HONG KONG. Mike, VS6WV, reports he has antennas up for 80/160 meters. He suggests that 3506 and 1829-32 kHz are good frequencies for him to listen to, and he is usually on 80 meters around 1130z onward. Schedules are possible by sending a message to Mike's InterNet address: mrvestal@hk.super.net

ZK1, NORTH & SOUTH COOK ISLANDS. Joe, DL7VTK, will be active from Penrhyn Atoll (North Cook) from February 11-25th. At the present, his callsign is unknown and there is a possibility he will be accompanied Ron, DL7VDX and Juergen, DL7UVO. Activity will be on all bands from 160-10 meters which will include WARC bands. They will be active mostly on CW, but also some SSB. For CW, check 10 kHz up from the bottom of the band's edge. There is a chance that they may be active for three day from Rarotonga (South Cook) after their stay on Penrhyn. QSL via DL3BUM or bureau.

OPDX MAILING LIST. Just a reminder! The OPDX Bulletin can be received via InterNet E-Mail (not Packet mail). Send an InterNet message to:
opdx-request@nshore.org
and on the "Subject:" line put the word "subscribe". No text is needed in the body of the message but if you want to write something, it is all right (I read them all!).

KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following packet and online addresses listed below.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

SB ALL @ ALLBBS $OPDXNODXA.5
OPDX/NODXA 1994 DX Survey

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995,
with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding
in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most
well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the
following format below.

```
---------------------------------------------------------------------
Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group
and QTH | | |
---------------------------------------------------------------------
CHOOSE YOUR MOST WANTED COUNTRIES. (Please list only 30 of your most
wanted countries. List CW and SSB modes separately.
CW - AB,CD,EF
SSB - GH,IJ
---------------------------------------------------------------------
I work: [ ] only CW [ ] only SSB [ ] both CW/SSB
---------------------------------------------------------------------
Comments on DXing in 1994: (Text Any Length)
---------------------------------------------------------------------
```

* Just Fill-in The Blanks And Send It To One Of The Three Address:

TS>So now I operate a lot of 20 meters. My problem is that I am
building up DX contacts and I am not sure of what to do to get a QSL
card from them.

TS>So, is there a good book, or something else, for this information??
>I got the ARRL piece on QSL cards, but that seems to just say send
>the cards in with no comments on IRCs or green stamps.

A lot of it depends upon how badly you want the card... and how many of
the same country you're working regularly... the 'garden variety' QSO's
(the ones you make regularly) will probably QSL you via the ARRL QSL
bureau, eventually.

For the ones which are more rare, you will want to send your QSL
directly to the operator or his QSL manager.

You may elect to include IRC's (Internations Reply Coupons) to (help)
ensure a timely reply. Some operators used to include a "green stamp"
($1 bill) or two in the envelope, wrapped in carbon paper or tin foil to
discourage "candeling" of the envelope by foreign postal workers to see
if it contained "banned" currencies. Some countries forbid foreign
currencies... and some foreign postal workers just help themselves to
the envelopes containing money. IRC's are a more sure way to go,
although they often cost more in the long run.

If the station has a statewide QSL manager, you still might want to
include a buck or two. Not so much to ensure a reply, but to help the
operator defray what can mount up to me a rather large personal cash
outlay, especiallly if a DXpedition, for logistics, not to mention QSLs.

You can always SEND the majority of your QSL's thru the ARRL Outgoing
QSL Bureau. I'm not sure how they're handling QSL's to Russia right
now. Possibly someone else can comment on that. I have heard that now
you're MUCH better off if you can QSL Russian ops direct or to a
manager.

Finally, contact the ARRL Incoming QSL Bureau for your call area and ask
them to give you the specs for envelopes and postage so you can obtain
envelopes to send to the QSL bureau (plus postage) and they can start
returning incoming DX QSL's to you on a more or less regular basis. In
some instances, you can send the bureau $5 and they'll provide you with
a quantity of the desired envelopes plus use the remaining $$$ for
return postage. This is often a LOT easier than trying to locate just
the RIGHT SIZE envelope in your town and then still having to send them
to the QSL Bureau.

This is NOT the definitive reply, but at least it makes the waters a bit more murky.

The problem with establishing a price on an older radio is that it is a buyers market. If a collector were serious, and your radio was in MINT condition, then it should be worth about $500-$600. However serious collectors are very picky and want the full manuals, boxes, and whatever else came with the radio for those prices. Next in line is the serious SWL (short wave listener) which I urge you to become, who would recognize this radio as one of the finer radios built in its time, as were Collins, and HRO radios. A real serious SWLer would be willing to pay $300+ for a clean HQ-180 with manuals. Next is the bargain hunter, who only has $200 to his name, and will only pay $199 or less. At the bottom of the heap is the hamfest price. I will describe in time how long it will take to sell it at a hamfest at specific asking prices.

$1 Gone before you arrived at the hamfest. Your table cost $10
$25 15 minutes because they couldn't believe it worked!
$50 10 minutes because it sounded more reliable.
$75 30 minutes because they had to look for a better deal.
$100 1 hour because a real buyer has to drink coffee first.
$150 3 hours because they just are not sure what they have to spend.
$200 Won't sell at the hamfest till the end of the day.
$250 That's what you ask for to get the $200 at the end of the day.
$300+ May take a couple of hamfests, but you will probably run into a serious collector or SWLer in that time.

Hi.

It souns funny that someone with a Canadian e-mail address should be
asking this question. There have been no-code amateur radio certificates
in Canada for many years.

In a nutshell, someone without code privileges can do most anything
above 144 MHz (including code!), provided the transmitter is an unmodified, commercially
bought unit. Hope this is helpful. 73.

407. Re: Amateur Radio Newsline #907

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-08 22:46:41 UTC
From: walker_d@ix.wcc.govt.nz
Message-ID: <3epq0h$o7m@golem.wcc.govt.nz>
Source record: 253705

In Amateur Radio Newsline 907, it was incorrectly stated that
"(ORACLE) guarantees it will be active in producing evidence in
support of abolishing Morse Code testing worldwide."

ORACLE policy has never been to seek the abolition of Morse Code testing,
either in New Zealand, or World Wide.

ORACLE policy is to lobby for international regulatory change with
respect to ITU RR 2735 and the MANDATORY Morse code requirement for
operation below 30 MHz.

The following statement from ORACLE seeks to clarify its position.

ORACLE IS NOT ANTI-CW

We have had feedback indicating that ORACLE is trying to do away
with Morse Code in amateur radio. This is incorrect.

ORACLE is lobbying for a regulatory change so that there
can be a choice in the means by which candidates obtain full
qualifications. Under ORACLE policy, Morse code testing would
be maintained as one of the alternative ways of qualifying.

ORACLE recognises that some amateurs are keen on using CW and
supports their right to do so. The future of CW activity in
amateur radio will continue to be mainly in the hands of CW
interest groups. ORACLE members appreciate that the proposed
regulatory change does not affect individual preferences.

NO FREE LUNCHES EITHER

ORACLE policy takes into account the following factors:
* there are a range of interests in amateur radio, and
* this should be reflected in the subject material of the
amateur examination syllabus.

Any alternative syllabus option needs to be of similar challenge
to the standard set by the 12 WPM Morse test (or equivalent tests
within each administration).

All amateur examinations, other than the Morse test, allow for
candidates with different strengths and weaknesses in different
subjects to be able to obtain a pass if they muster sufficient
correct answers. Amateur radio is the winner for having operators
with a diversity of skills and interests.

In summary, ORACLE policies are to:
* maintain overall qualifying standards
* maintain Morse Code as an option for qualifying
* introduce alternative options to the Morse Code tests
* provide individuals with the option of being examined in depth
on certain topics within the Amateur syllabus.

We believe that ORACLE policies are balanced, inclusive and progressive.
They are not anti-CW and they are not aimed at abolishing Morse
code testing.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 08/2330Z JANUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 08 JANUARY AND FORECAST FOR 09 JANUARY - 11 JANUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 07 Jan
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 1.0E+04
Daily Electron Fluence >2 MeV: 2.6E+08 (moderate)
X-ray background: A1.5
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
09 Jan 10 Jan 11 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 09 Jan: 75/13

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet to unsettled

Estimated Indices : A K Observed A Index 07 Jan
Learmonth 8 2222 3222
Fredericksburg 7 7
Planetary 8 9

Observed Kp for 07 Jan: 2223 3322
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
09 Jan 15 Unsettled
10 Jan 18 Unsettled to active
11 Jan 18 Unsettled to active
COMMENT: A coronal hole is expected to increase geomagnetic activity
during interval 10-12 Jan.

3A. GLOBAL HF PROPAGATION SUMMARY

LATITUDE BAND
DATE LOW MIDDLE HIGH
08 Jan normal normal normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
09 Jan normal normal fair
10 Jan normal fair-normal fair
11 Jan normal fair-normal fair
COMMENT: Slight degradation in HF comms may be experienced at high lats
over next few days.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
08 Jan 18 near predicted monthly values

Predicted Monthly T-index for January: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
09 Jan 20 10 to 15% above predicted monthly values
10 Jan 10 Near predicted monthly values
11 Jan 10 Near predicted monthly values
COMMENT: Slightly degraded HF comms conditions are expected after
today, for circuits in southern half of Australia.

409. Duke City Hamfest

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-08 23:28:17 UTC
From: wa5whn@mack.rt66.com
Message-ID: <3epseh$2eo@mack.rt66.com>
Source record: 253706

The Duke City Hamfest (Albuquerque, N.M.) is scheduled this year for August 19, 1995 (Saturday only) @ The New Mexico National Guard Armory, 600 Wyoming Blvd. NE, Albuquerque, New Mexico. Tables are $10.00/each, please specify whether or not You need AC Power or not (Hint: all AC Power outlets are usually taken by May, '95). Free Admission, forums given by the ARRL, T-Hunt Group & many others. VEC Exams are by pre-registration only, contact AA5MK (callbook address) about the VEC exams, limited to 50 People. Talk-in on the 147.15 MHz repeater (open, no pl) & 147.10 MHz repeater (67 Hz PL). SASE to PO Box 6552, Albuquerque, New Mexico 87197 for a flyer. No overnight camping on site. Vendor set up is after 1800 MDT, August 18th (Friday) . Only those who have sent in their money for tables will be allowed to set up, inside Friday night. Westside parking lot is reserved for the Tailgate Swapfest (No charge). Set up for that starts @ 0600 MDT on Saturday, August 19th. Doors open at 0700 MDT, August 19th, to the public. Further information can by obtained via the internet, by sending email to WA5WHN@rt66.com, subject line should read Duke City Hamfest. Remember, all table requests with checks , should be sent in by August 14, 1995.

73...Jay, WA5WHN

410. Re: Why are we called HAMS???

P> ICOM "free pencil (or similiar gimmick)" giveaway. That chain of events
P> will place about 30,000 "hams" in the arena simultaneously.
P>
P> Now, take a nice, long deep breath. After you finish gagging, what are
P> you reminded of? PIG FARM! What's another name for pig? Ham.
P>
P> Any questions?
P>
Yes, what is a Hog, if not another word for (male) pig ?

I like the explanation about the word ham is borrowed from the
theater, where a ham is an actor/actris that want the light for
them selfs. So when telegraf operators came to live with morse, and
started to showoff at 20 wpm, they were called hams. Later, when
it went wireless, there were still showoffs and the name ham
stuck to them, and later still, to all.

Ham, as from the theater, is in Danish : 'frikadelle'.
Bob Hope was IMHO a 'frikadelle'.

>showers and ultimately be able to determine the radiant. Any help and
>othier resources would be appreciated. Iam currently a no-code tec
>I have a 2meter and 10meter(I listen) can any of these radios be used ?

The best way to catch meteors is to listen for "pings" of refracted signal off the trails from a strong distant transmitter. The entire spectrum from 10 meters to 2 meters is suitable, with the smaller less dense, and more common, trails pinging at the lower end of that spectrum while more dense trails from bigger meteors will be detectable near the top of the spectrum. However, constant carriers aren't common in the ham bands. Better is to monitor the visual carrier of a distant TV transmitter. Channel 2 or 3, depending on what's not active in your area. Ideally, the transmitter will be 600-800 miles away for best results. Alternately, a FM broadcast signal can be monitored similarly, though more dense trails will be required for a good ping. You may be able to take advantage of 10 meter and 6 meter beacon transmitters, though those are usually of too low power to be very useful for this job.

You'll want a good narrow band receiver, not the wide bandwidth of an ordinary TV receiver or FM receiver, in order to catch the most pings. A scanner with a preamp can be pressed into this service, but a good communications receiver covering the frequencies of interest will be better.

To determine the radiant, you'll need a good clock, a knowledge of where your strong carrier station is located, and a moderately directional steerable antenna. The rest is just geometry.

412. More questions from the packet "lid"

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-09 00:34:29 UTC
From: wcoyle@delphi.com
Message-ID: <BO-aZgN.wcoyle@delphi.com>
Source record: 253709

Hi everyone, I have a few more packet questions for all of you. I finally got my packet station up and running, and it's a lot of fun, but there are things I was looking to do, and I needed some help.

Does anyone know how to obtain information on what packet BBS's are in my area. I've checked the repeater guide, and it was little help. I primarily interested in the DX packet clusters and in networks, particularly in sending e-mail via packet to my friend who is a ham up a Penn State College. I'm located in the southern part of the state of Pa. 20 miles south of Philadelphia. My setup is a 50 watt 144/440 radio and I'm up on a hill, so my reach is really good.

414. About 6-m DX (to 9K2HA really)

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-09 01:32:22 UTC
From: rc@itchy.ncsl.NIst.GOV
Message-ID: <9501090132.AA02130@itchy.ncsl.nist.gov>
Source record: 253711

This is an open letter to 9K2HA who posted a message saying that he has become interested in 6-meter DX, has bought a 736 and put up a 3-el beam...but seems disappointed since he's heard no DX.

I recommend the ARRL book "Beyond Line of Sight", E. Pocock, ed ISBN:087259-402-5 and various other VHF manuals from RSGB, etc.

Welcome to 6 meter DX ! The challenge of 6-m DX is FAR different from the lower frequency bands. Unlike 20-m and lower frequencies, you don't just get on 6-m and work DX..."like shooting fish in a barrel". Six meter DX is the reward for a lot of patience and an understanding of propagation indicators.

Six is something like 10 meters, but more so. In low-sunspot-number years, right now, there is no F-layer propagation on 6. When the smoothed sunspot number gets somewhat over 100, we can expect to see F-layer DX back on 6. The equivalent number for 10-m F2 is in the 50-60 range.

But don't give up! No matter what the year, sporadic-E layer propagation Es or "short skip" is the life-blood of 6-m DX. The ranges aren't world-wide, but can be interesting. Single-hop (up to about 2500 km) is quite common in the summer in temperate latitudes, with a lesser peak in the winter. two- and more hops are less common, but trans-Atlantic contacts happen each summer. The extreme (as far as I know) is about 10000 km, but very rare.

Around the Equinoxes, people less than perhaps 20-25 degrees from the magnetic Equator can work paths centered on the mag equator in the mid-evening by transequitorial (TE) scatter (sounds quite "fuzzy" some times). For example, when I was in Guadeloupe (FG) a few years ago, I worked southern South America each evening for a week, and also worked Morocco (both by TE). The magnetic Equator is well north of the geographical one in the Eastern hemisphere. TE was first well identified by Cyprus-to-South Africa contacts, every night for weeks at a time. It doesn't strongly depend on sunspot number.

Have fun on Six; monitor 50.110 SSB/CW (or maybe 50.125).

I have to agree with ya, Ben.

As a former "Big Time DX" I appreciated a good phonetic now and then. Looking back in my log, I recall the time that Steve KO4HC from Florida tried contact me in a pile-up on 28.302 MHz on during uncommonly cold day in February on the Big Island of Hawaii. I had just worked 16 operators in a 30 minute span and the calls were coming in too thick to separate. It gets tough to read through all that mess - everybody starts to sound the same. It all changed when Steve dropped the words, "Hot Chocolate." It was like he had just poured a cup!

```
Frequently I hear hams say, THE name HERE is______.
How often do you say when you meet someone (assuming your name
is Charlie), THE name HERE is Charlie? You never do that right? After
to do so is so impersonal and asinine that you would not want
to seem like a fool-then why do it on the air? Just because you
are a ham is no excuse not to be personal. Of course you could
really sound like THE jerk of the year by saying, THE first
personal here is Charlie (at least if you are not personal-you are
using the word-albeit it in an extremely impersonal way).
Also why say "here", is your name any different when you are "there?"
```

73 from we here (not there) at K1OIK where THE name are Burt.

How many times do I have to read messages from hams that send a "Thank You" addressed to ALL. When one seeks help and someone takes the time to respond, the least the receiver of help can do is send a simple individual reply for thanks. After all-the respondents to this call for help responded one by one. I have received up to 75 messages in a call for help and sent individual thanks to each. It was very time consuming, but it was the right thing to do.

Would you at your wedding, if you were the groom, get up at the end of the reception and yell out, "Gee, Thanks everyone for the gifts?"
If you are a T Y P I C A L ham--absolutely.

It is unlikely you will respond to this if you did not even bother to respond to someone who H E L P E D you.

customer service != line technician.

they're looking for someone who can handle calls from people that can't
get the software running for the new multimode tnc they just bought..
like how come they can't get windows to run on an 8086 PC they've
had for 10 years etc.

they need a person to run the help desk that speaks the jargon.

you could always apply anyway...you might get the nod.

A week or so ago I got an email address of infobot@infomania.com as
a callbook server. You are supposed to type
callsign <kd4nav>
in the body and you get email back with the results. I did this then and
it worked. I tried today and got nothing. Did I do something wrong or are
there others I can email for info?

I also tried in the body
callsign <kd4nav> ablackbelt@aol.com
to see if the list server needed the return address in the body. BTW the
callsign I typed is my own.
Any help in the matter would be greatly appreciated since I do not have
FTP on AOL.

I don't know if it is still in print or not but TAB Books published a book
called "Radio Astronomy for the Amateur" that was written by Dave Heiserman.
It is probably just what your looking as it has chapters on building everything
from scratch and it explains all the math as well. Good luck!

From: pascalamb@aol.com
Message-ID: <3eqe9f$ms4@newsbf02.news.aol.com>
Source record: 253720

I was wondering if there's any market for vintage amateur radio equipment -- specifically Heathkit equipment from the early 1960s. My father, an ham radio operator who was inactive for some years, recently passed away and we'd like to sell or donate the equipment. Any information or advice would be appreciated. Thanks.

I have an MFJ, top of the line, model 493 and every once in a while that happens to me too when I'm sending at a slower rate for another ham. I usually don't send at the slow rate, so it doesn't bother me as much.

I have heard that trying to call MFJ is next to impossible because of the busy signal that you constantly get.

Gary,

From your old "WA4" call sign, it would appear that you've been licensed long enough to remember the Novice Class prior to the FCC's so-called Novice Enhancement, so I don't understand why you would bash it. First of all, except for limited 2 meter AM, operation was restricted to 80, 40, and 15 meter CW within specific bands (as it is now), with crystal control and DC plate input power limited to 75 watts. Those restrictions pretty well insured "legal, safe, and non-interfering operation." I also disagree that the test content was not adequate; don't forget, that was prior to the "question pool" memorization days. Beyond that, the Novice Class license term was one year and it was not renewable, so everybody was busy from day one enhancing their technical skills in preparation for their General Class exams. Passing them required doing such outrageous things as actually knowing regulations and theory and drawing circuit diagrams with component values. (Code speed came up virtually automatically by just being active.)

The Technician Class license was administered by any General Class amateur and the General was administered at an examination point by the FCC. You can guess why so many Technician Licensees cursed the code and ended up on 6 meter AM, the 1950's equivalent of 2 meter repeaters.

If Technicians upgraded to General, they not only had to pass the 13 wpm code test, they also had to take the theory examination again. The FCC didn't recognize the volunteer examiner having administered the written test for the upgrade. There were also random reexaminations given to Technician licensees, but if someone was called into the FCC for that, then they only had to pass the 13 wpm FCC administered code test to upgrade.

I very definitely was a lot tougher, but as with anything else, you get back what you put into it. Particularly since radio was my hobby and not my profession, I felt that I had accomplished something. I also felt pretty good when, just for fun, I got that First Class Radiotelephone

certificate too.

The Extra Class amateur license test was more difficult by the way. It was reputed to be the toughest exam the Commission gave. Lots of us had General Class amateur tickets and various commercial licenses, but nobody in my circle of friends had an Extra. (I passed the code and failed the theory the single time I took it in 1957.)

> I'm suggesting a return to a single basic license, eliminating the
> irrelevant Morse speed test, and eliminating any license class with
> insufficiently demonstrated skills to operate legally, safely, and without
> causing interference to other services. I've outlined what I think the
> content of that exam should be in another message.

"Irrelevant" is your opinion and as we've discussed before, a lot of us disagree with that perspective. The examination elements cover virtually all aspects of the hobby and some might be termed "irrelevant" with as much correctness as you've used for the code. Everything in the exams that doesn't interest me or that I don't intend using on the air is irrelevant, but I learn it anyway if I expect to pass the test. You might have the technical comptetnce to come up with a way to "phone home to ET", but like it or not, if you want an Extra Class ticket, you're going to have to pass the 20 wpm code test.

Your proposal sounds similar to what the ORACLE group down in New Zealand wants. They are lobbying for testing only those things that the license applicant feels are relevant to them and suggest such things as (this is a quote) "keyboard skills". Can they mean taking typing tests to get an amateur radio licnese?

I support restoring the principle where having advanced copies of tests or question pools constitutes cheating and disallowing VEC's having any control over test content. There was also nothing wrong with the licensing structure and associated privileges that existed before the "Novice Enhancement."

It's been a few years, but I believe the fee is $21, with no annual
renewal charges. You'll have a hard time finding someone at the DMV
who has even heard of callsign plates, but be persistent. The person
"helping" me insisted that I was simply requesting a "vanity plate" and
was prepared to proceed along those lines. I dug my heels in, and
eventually they found someone who knew what I was talking about. She
produced the proper form, and all was well.

Netters,

I have a TAD AL-165 that was formerly used on 151.625. I have purchased
the correct crystals for this rig for 2 meter operation, however my
freq. counter senses nothing when using the new crystals. Apparently,
the 4 MHz difference is more significant than I first thought. I was told by
a service company that they would/could tune down the rig for the small
price of $35, however if all they are going to do is adjust a few caps/pots
then I'd like to take a crack at it myself first. Anyone ever done this
kind of radio adjustments?? Looking for any pieces of info I can get.
I don't have a scope, but have a freq. counter.

Thanks,
Andy Cropley - N2ZAM

437. Costa Rica communication chain needed

VK2 DIV. PRESIDENT'S MESSAGE

This is Michael Corbin, VK2PFQ.

First things first....Happy New Year to everyone from the N.S.W. Division of the W.I.A. I hope everyone had a wonderful Christmas and enjoyed the break. To those of you who are still on holidays.... half your luck!

You will recall that on my last address before Christmas on the 16th December, 1994, I released details of proposed increases to Amateur Radio Licence fees. The response was overwhelming. I hope that by now MOST of you have written to your Local Federal Member. If you have not done so, because of lack of information, as to who is your Federal Member, then there are several ways in which you can gain this information.

The easiest way would be to ring your Local Council Office, they always know whose who, as they are constantly in touch with Members State and Federal alike. This is a Federal matter so contact should be made with Federal Members only, not forgetting of course Federal Senators. If you are fortunate to have a member who is a member of the Communications Committee, then you are doubly lucky, as it is this Committee which makes recommendations on these matters. If your representative happens to be a Member of the ALP caucus, well again this will add impact to your approach. This is the group which make ALL and I mean ALL the decisions regarding the running of our Country. Another way that you can obtain the information is to ring the Parramatta Office which has a list available. You will need to know your Electorate. Finally if you have access to Packet Radio a complete list of the names and address of all Members will be available sometime tomorrow as an Appendix to the text of this week's Broadcast.

If you are able, write a letter which is your own work. Form letters are wonderful if that's all you can manage, but the most effective letters are those written by individuals. Avoid verbose, rambling letters. They are simply NOT read. Concise, short and to the point is the order of the day. As most of you are aware, I am in Local Government and have been for nearly 15 years. From time to time issues arise which galvanise sections of the Community into action. Usually someone masterminds a "mass produced" letter, which EVERYONE sends. Lets examine this for a moment from the receiving end of these letters.

Politicians receive lots and lots and lots of mail. This mail is, in the main opened by secretaries not in my case I hasten to add. The result is that when the member deals with his or her correspondence, they are told something like .....Oh yeah, we had another 20 of those mass produced letters about that Amateur Radio business, but there were two different ones this time....The chances are... these two will be read....the others will only be recorded as... having been received. Oh! and about petitions. These are, at this level, not worth the paper they are written on. They are of nuisance value only. They are read in Parliament, usually when no-one is around, recorded and filed in the basement. Don't waste your time getting one of these together. Individual letters are the key....and the more the merrier. Federal Politicians have got to be made aware that there are around 17,000 plus Amateur Radio Licensees. This represents at least 34,000 votes and these 34,000 voters have families and friends etc. etc.....need I go on?

Having said all the above I wish now to place before you the following information, which I find most disturbing. An appropriate title could be perhaps...."Don't tell me there is still a nigger in the W.I.A. woodpile." (I don't suppose your allowed to say that thesedays.) Anyhow, why don't I supply you with a few facts and let you be the judge.

I have been sent a Press Release which I will read exactly as it was written. I have added some appropriate comments.

"FOR DIVISIONAL BROADCASTS, JANUARY
WIA Federal, 5th January,1995
From WIA Federal President, Neil Penfold VK6NE...And I quote...

WIA ACTION ON PROPOSED NEW AMATEUR LICENCE FEES

Since the SMA explained the proposed new amateur licence fees to us early in December and we arranged to distribute the information as rapidly as possible through the various means at our disposal, the WIA has not been idle.

But before outlining developments, I should dispel some erroneous concerns that many amateurs have raised.

The proposed new fees were revealed to the WIA's SMA Liaison team FOR THE FIRST TIME on December 5th. (comment: The editor of this letter used CAPITAL LETTERS for the words "For the first time"...would this be necessary if he was not trying to hide something??? This is in fact NOT TRUE, there were 4 meetings in all with the SMA at which "special presentations" were made, regarding possible increases in licence fees. The December 4th meeting was the last of these meetings. AT NO TIME was the VK2 Division made aware, nor can we gather was any other Division, that increases were proposed or that submissions could be made against such increases.)....to continue "The information was embargoed from public release by the SMA until December 14th when they put full licence pricing policy details before representatives of all the other spectrum users at a meeting of the Radio

Consultative Council in Sydney.

Text for the insert which appeared in your January issue of Amateur Radio was finalised on the morning of December 14th, and flown to Melbourne to be printed and inserted in the magazine the following day.

On December 15th, the text of that insert was issued to the packet radio network." (Again I comment: One wonders why the Federal Body of the W.I.A., I stress the Federal Body of the W.I.A. made this information available to an individual for dissemination on Packet Radio, when the individual concerned was present at the Foundation (?) meeting of a Group of dissidents. Is Federal a member of this group or are members of the Federal W.I.A. associated with this group? This is a question which should be answered. The problem is, is that when any mention is made of this Subject.....Yeah you guessed it ...You get a solicitor's letter. You'll recall that I got one of these just before Christmas). To continue with the text of the letter.......

The WIA's SMA Liaison team and the Federal Council have been monitoring reaction and formulating plans to put a well-argued response to the Spectrum Management Agency." (comment : WHO on the Federal SMA Liaison Team and WHAT members of Federal Council? Well I'll tell you, who they were NEIL PENFOLD and ROGER HARRISON.....that's all, nobody else!!!! That's scandalous...). To continue and I quote

"It should come as no surprise that, fundamentally, the WIA is opposed to a number of aspects of the proposed new fees, in particular, the Spectrum Access Tax.

As a result of discussions within WIA Federal," (comment : With whom Mr. Penfold? Not with VK2 or VK3 or any other Division we can gather. I ask again... With whom Mr. Penfold - Oh of course, you consulted with Mr. Harrison the Media Liaison Officer (sic)....) UGH!! to continue "on December 30th I authorised a press release to be issued to the media so that, hopefully, the licence fee issue could be more widely disseminated, particularly with a view to reaching non-members of the WIA and other interested people and groups." (comment: GROUPS, yes groups indeed.... our funny friends get another mention. Yeah that's that group nobody will admit to belonging to..... It was a little late don't you think and WHY Mr. Penfold, were these press releases only released in Victoria and WHY Mr. Penfold were they in the name of Roger Harrison as Vice President and not you as President Sir? I wonder did you even see them? To continue.....

"Fortunately, it caught the attention of the media, receiving national coverage on radio and television on Tuesday, January 3rd, a story and picture on Page 3 of The Age newspaper the same day, and subsequently on a number of Victorian radio stations, as well as stories in metropolitan and regional newspapers.

As I said, the WIA is monitoring reactions to the proposed licence fees and to say the response has been overwhelming would be an understatement. It has been most welcome.

The WIA plans to put the strongest possible case to the SMA, reflecting the views of members and non-members alike, but there has been only a short time since the information was made available and there is only a short time frame in which we can negotiate before the deadline of March 1st.

It should be obvious that only reasoned argument will win the day and the WIA aims to take that course in developing a case to negotiate with the SMA.

On behalf of the WIA, and the amateur fraternity at large, I would like to thank all those who have taken the time and made the effort to put their views.

Neil Penfold VK6NE, WIA Federal President."

(Comment: Oh yes and there was a note on the bottom which read......

"NOTE

There may be late additions or variations to this item " (Comment: What does this mean? Could this whole release be withdrawn?)...or has it? even as I speak..to continue .... "contact Federal Media Liaison Officer (sic), Roger Harrison VK2ZRH"

Well listeners there you have it. Further comments are now appropriate....

As I have stated earlier on, there have been FOUR yes FOUR meetings between the W.I.A. SMA Federal Liaison Committee and the S.M.A. At ALL of these meetings presentations were made to the W.I.A. regarding an increase in fees. The Federal W.I.A. had time to do something about this increase. What did it do?.... answer... NOTHING!!!!!.....not only did it sit on it's hands but it failed to bring it to the notice of the various State delegates. This Division was neither advised of any increases nor was it invited to comment on reasons why any such increase should be tolerated. Where were the Media Releases by Mr Harrison to ALL Divisions regarding this matter??? There were NONE. The question is WHY? What was Mr. Harrison doing. What was his motives for doing....NOTHING???

The final submission was made at the December meeting. You'll recall that the SMA was reported as saying at that meeting quote, "The SMA view is that amateurs had been given ---a pretty good deal!" A little Dickie Bird told me that the W.I.A. Federal agreed with this and undertook to.....SELL IT to the Amateur Radio Fraternity .....Dear oh dear oh dear! Some salesmanship. Without saying anything to the SMA or our Federal Delegates the Federal W.I.A. "DUO" prepared their now famous Press Release.....with the result that relationships with the SMA are at their lowest ebb ever! Instead of rational debate within the framework of the Liaison Committee, set up for this very purpose, Individuals have gone out and done it THEIR WAY.... I stress the word Individuals, as it was only two people on the Federal Body, who decided that such a Press Release should be prepared, NOT the people who were elected to the Federal Council by each Division.

This is the most offensive thing regarding this whole business. If you consult page 2 of the latest AR Magazine, you will see a list of the members of the Federal Council. To save you looking it up, I'll read them for you.....

President Neil Penfold VK6NE
Federal Councillors
Richard Jenkins VK1RJ Peter Kloppenburg VK2CPK
Alan Noble VK3BBM Ross Marren VK4AMJ
Bill Wardrop VK5AWM Bruce Hedland-Thomas VK6OO
Jim Forsyth VK7FJ

Now, the Federal President under the current M. & A's does not have a vote. The Federal Media Liaison Officer (sic) definitely does not has no vote. So the question is......who is making the decisions that affect this Institute of ours.....Answer... People who have no voting rights within the organisation, which raises another question, Why is it so? This Division removed Roger Harrison from the Position of Federal Councillor as "He no longer had the confidence of the Council of this Division." The Federal President and some of his Council, for reasons best known to themselves, chose not to remove Mr. Harrison from the positions he held within that organisation. The rest is history. A copy of this Broadcast will be sent to all Divisional Presidents together with a covering letter, suggesting they review the activities of their Federal Councillors. This Division believes that some of these Federal people have been there far too long and have grown stale and complacent....You know some of them have been there for TWENTY YEARS!!! The W.I.A. needs vital, interested people with new ideas and a commitment to fight for the rights of the Amateur. Federal should not be treated as a "junket". I give you this undertaking, that as long as I'm on this Council, the Federal organisation will be kept on their toes dancing to the tune of the members... NOT their own!...Or those of people with Hidden Agendas.

The purpose of my strong views on this subject is that there is a move afoot to discredit the W.I.A. as a whole. Not the least of which is that "ratbag" mob of the dissidents of yesteryear....you know... the mob that meets in phone boxes around the Newcastle area. This Division has investigated this to the best of our ability and have discovered what I have stated above. This W.I.A. of ours has been in existence since 1910. Your Council will not stand by and see it destroyed. If there are to be further negotiations with the SMA, then it SHOULD NOT BE with the involvement of the same group which has dealt with them in the past. It is to this end that I will contact other Divisional Presidents and request that the appointments of their Divisional representatives at Federal level be reviewed. Members want decision makers not seat warmers.

You'll recall that I mentioned on my last Broadcast for 1994 that C.B. operators had been granted a "Class Licence".. Would it interest you to know that such a licence had been offered to

the W.I.A. ......Yes, you heard it right......such a licence was offered to the W.I.A. They did not avail themselves of the opportunity. Hmmmmmmmmm!! Makes you wonder doesn't it!

In order to alert you to further strange goings on, could I again direct your attention to the latest AR Magazine, Page 1 this time ....There is a position called....Publishers Nominee. AR records that this position is held by one Bill Wardrop VK5AWM. Well it seems that this person has resigned from this position. Guess what......Our Federal President has called to inform our Federal Councillor Peter Kloppenburg VK2CPK, that he has appointed Mr. Roger Harrison VK2ZRH to this position......I make no further comment, save to quote from a letter faxed to me yesterday. It is addressed to the Federal President and I quote,

"Dear Neil,

In confirmation of our telephone conversation on this date and your fax to Jim Linton regarding the temporary appointment of a "Publishers Nominee" for AR Magazine.

The appointment of Roger Harrison to this position in any circumstance is not acceptable to the WIA Victorian Division.

This Division believes that the Current Editor, Bill Rice, should be responsible for all material published in the magazine until such time the Federal Council sees fit to appoint another person to the position vacated by Bill Wardrop.

If such an appointment is in fact necessary, same should be made by the Federal Council and resolved as an item of business brought forward at a Federal Convention in accord with the Articles of Association.".....unquote

A letter along similar lines is being prepared by Peter Kloppenburg VK2CPK Divisional Councillor.

Oh! late news just to hand...In Saturday's Sydney Morning Herald. There is an Advertisement from The Spectrum Management Agency... It's headed...Draft New Australian Radiofrequency Spectrum Plan.... Quote...

The Spectrum Management Agency has released a draft new Australian Radiofrequency Spectrum Plan and is inviting public comment on it in accordance with the requirements of Section 33 of the Radiocommunications Act 1992. The draft Plan is intended to replace the current Spectrum Plan (Statutory Rules 1990 No 413).

This Plan is being updated to incorporate changes to international frequency allocations made at the 1992 International Telecommunication Union World Administrative Radio Conference, and to support the introduction of national reforms in spectrum management embodied in the Act.

Copies of the draft Plan can be obtained from the Agency by contacting ....Blah! Blah and so on and so forth...

The closing date for comments is 17th February 1995.

Well I wonder what that is all about...Rest assured THIS division won't sit on its hands. I'll be on the 'phone First thing Monday Morning for our copy. This Division won't be caught napping... TWICE!!!!

For those of you who have access to Packet Radio have a look at the latest message from the Dissident Mob. VK2YEL....Hmmmm. Wasn't he the Secretary of this Division when all that Tower Fiasco was going on?? "ARAAA@VKNET date 5th Jan Message No.23529...The last sentence is particularly interesting in view of the contents of this Broadcast and the contents of that message....Bob, you can only fool some of the people some of the time....Any "situation" that might "exist" in VK2 was not of my doing....Can you say the same of yourself Sir?

More on that advertisement next week....and write those letters. It's up to us to save this awful situation.

SEE YOU THEN.

P.S. The promised list of Federal Members of Parliament and Senators will be posted A.S.A.P.

Michael Corbin,
VK2PFQ,
PRESIDENT, W.I.A. VK2 DIVISION

Divisional News

Broadcast Roster

The January to March roster for 1995 has been drawn up and was posted on Thursday. It should arrive no later than Tuesday.

If any broadcast team member does not receive their roster by Tuesday, please contact the Roster Co-ordinator, Steve Pullen VK2QZ.

If anyone listening would like to join the Broadcast Team please contact the Parramatta Office on 689-2417 or Steve VK2QZ (QTHR).

No special skills are required, nor is an amteur license, although we are in need of a few more full-call amateurs and people with good "news-reading' voices.

Steve Pullan VK2QZ, Broadcast Roster Co-ordinator

Attention all Satellite Enthusiasts

The New South Wales Division of the Wireless Institute of Australia has acquired a large quantity of surplus satellite receiving equipment - not only for use as-is, but at such a price that they are readily demolishable for spare parts.

For more details, listen to the next broadcast, as arrangements for handling this gear should be finalised by then.

Divisional information

The N.S.W. Division of the W.I.A. runs Amateur classes and examinations, a free QSL bureau for members, slow morse practice on the 80m band, a technical library and bookshop, and Trash and Treasure sales on the last Sunday of every odd-numbered month.

You're invited to contact the Divisional Office for more details of the activities of the N.S.W. Division of the W.I.A.

Federal News

Moves on the 80m DX window

The WIA is to approach the spectrum Management Agency (SMA) with a proposal to extend the 3795-3800 kHz "DX Window" segment of the 80 metre band. A lengthy and very well-researched submission compiled by Peter Forbes VK3QI was put before the Federal Council at its October quarterly meeting. The submission recommended that the DX Window be extended, to cover from 3750 kHz to 3800 kHz on a "secondary usage basis outside of normal business hours (5 pm local time till 8 am local time)."

This adds 45 kHz to the Window, making it 50 kHz wide, while the operating period restriction permits amateur usage at times when most radio amateurs are able to pursue their interest.

The 80 metre DX Window gets its greatest usage during the troughs of the solar cycle. We are currently in the declining phase of solar cycle 22, with the minimum forecast to occur between late-1995 to mid-1996, so 80 metre DX activity is increasing.

A 50 kHz-wide DX Window would bring Australia amateurs more into line with amateurs in other countries in the Asia-Pacific region (who have co-existed with commercial users for many years), and permit a lot more frequency agility to avoid the already high levels of international interference, according to the submission.

The recommendation to extend the Window by 45 kHz was based on extensive research, including monitoring the band between 3700 kHz and 3795 kHz, researching and interviewing commercial licensees of allocations to this segment, and monitoring amateur usage of 80 metres in this area of the band locally and internationally.

Commercial users of the 3750-3795 kHz segment have been declining for some years, and four reasons were identified: users moving to altenative HF allocations in the 4-6 MHz band which offers improved communications during daytime, increasing use of cellular mobile telephones, a change to satellite communications by some users, and moves to UHF CB with the spread of the UHF CB repeater network.

Monitoring between January and September 1994 has shown there to be no consistent or identifiable operations by commercial operators in Australia on 3750-3795 kHz. Below 3750 kHz, state emergency services make consistent use of the segment down to 3700 kHz.

The proposal is to be discussed with the SMA during the coming months.

Greece - Australia reciprocal licences

Information from the SMA to Federal Council

Dear Mr. Penfold,

I am writing to inform you that on the 21 October 1994, a Memorandum of Understanding (MOU) was signed between the Hellenic Republic (Greece) and Australia, recognising the Licence categories of Amateur Radio operators of each country and granting equivalent authorisations thus allowing the Amateurs to operate in both countries without having to be examined again.

This Arrangement (MOU), comes into effect on the 24 December 1994 after the signing by the Greek Ministry of Foreign Affairs, and is registered with the Department of Foreign Affairs and Trade (Australia).

The table of euivalent Authorisations is shown below:

The Hellenic Republic Australia

Certificate of Category "A" Amateur Operators Certificate
of Proficiency AOCP (Full
Privilege Licence).

It would be appreciated if the Amateur Operators Limited
Administration of the Hellenic Certfifcate of Proficiency
Republic would consider issuing AOLCP (Limited Licence).
to Australian Limited Licence
holders, during their stay in
Greece, a permit equivalent to
the Certificate of Category "A"
and conditional on the Greek
operational requirements.

Certificate of Category "C" Novice Amateur Operators
Certficate of Proficiency
NAOCP (Novice Licence)

Certificate of Category "B" Amateur Operators Limited
Certficate of Proficiency
and Novice Amateur Operators
Certifcate of Proficiency
(Combined Licence)

Yours sincerely
Brian Heyes
International Liaison Team
Business Directions Group

WICEN News

Welcome to the start of the new year, and we trust that all personnel enjoyed a happy and safe holiday. It would be appreciated if all regions would advise the Publicity Officer, Dave VK2KFU, of their regular nets and meetings, in case of any inaccuracies in past bulletins.

In previous bulletins we advised you to write to the media, publicising WICEN's involvement in the Darwin and Newcastle disasters; it now appears that you should write to the Minister, complaining about the unjustified licence fee increases! Please make sure to stress the voluntary aspect of your involvement, and that perhaps you could be exposed to danger when placing your own equipment at the disposal of the various authorities. In the meantime, the various authorities such as the SES and Bush Fire brigades will be pleased to know that, unlike this time last year, the Dural facilities remained constantly available for WICEN use.

There are no events this month, but two new events for the calendar are: the Bathurst Car Rally on the weekend of 25-26th February, and the Eugowra Car Rally on the 8th April; the organiser is Alan VK2YYJ, and please note that both events are merely tentative at this stage. Alan advises that a major event is the Oberon Car Rally on 29th April and many people are required. He can be contacted on packet radio as VK2YYJ@VK2CZR. In the meantime, regular events for March include the RTA Car Rally over the week of 4-11th, and the annual Bungonia Cave Rescue on the weekend of 18-19th.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

Magazine Roundup

Here again is a summary of the local magazines which, in the author's opinion, could be of interest to amateurs and SWLs alike. This week we discuss the January issue of the various magazines.

"Electronics Australia" discusses NASA's Deep Space Network; the activities of an old-timer, Archie Chaswell, formerly VK4CA and VK4CB as described, with emphasis on his construction of clandestine receivers in a Japanese POW camp; a dry-cell charger is constructed; simple switching regulators are explained, and a programmable pulse generator is concluded.

"Silicon Chip" describes a simple sun tracker for a solar panel; an automatic switch-off circuit for torches is built; as is a dual-channel UHF remote control unit. We are shown how easy it is to work with surface mount components, and a surface mount wideband pre-amplifier is built.

"Amateur Radio" describes a back-to-basics receiver for 80 and 40 metres; capacitors for use at high RF levels are discussed; the challenge of operating QRP, in particular, relationships between power and S points is promoted; "Random radiators" makes a welcome return and discusses mobile HF antennas; a simple VHF-UHF dual band antenna is dicussed, along with some simple coaxial stub filters; variable capacitors are easily constructed from trimmers; the various Curtis Key chips are discussed; the alignment of repeater cavities is explained; and an insert from Roger Harrison VK2ZRH, Federal Vice-President and member of the WIA SMA Liaison Committee, explains the new licence fees which could well be in force this year.

"Amateur Radio Action" continues the series on weather satellites; the series on high speed packet radio continues with 9,600 bps communications; a digital signal processor (DSP) is built; and the importance of using the correct feedline at VHF/UHF is discussed along with what is called a continuous travelling wave antenna.

Finally, "CB Action" presents an interesting article on scanners and telephones with emphasis on the strange USA eavesdropping laws; explains why theory is required for Amateur radio operation; constructs various accessories for scanners, including a dipole and some filters; and explains the different sources of interference.

Be listening next month for another summary of the local magazines.

--Dave Horsfall VK2KFU

News briefs

Scanner prevents murder in Tennessee

A woman testing a radio scanner she got for Christmas picked up a telephone conversation that detailed a plot by a woman to have her husband murdered.

The overheard conversation led to the arrest of the woman's neighbour, Jacqueline Greene, 32, and her boyfriend Christopher

Scott Davis, 21. They were charged with plotting the death of James Kenneth Greene, 30.

Their plan was for the woman's boyfriend to murder her husband tonight during a staged burglary at the Greene's home near Bartlett, Tennessee. The woman who owned the scanner, Donna McGee, called over her daughter, who recognized the names mentioned during the conversation. They then referred the matter to the local sheriff.

It was the classic "older woman tries to get enamored young man to do her dirty work" scheme. Upon questioning, the suspects confessed that they had been trying to kill the husband for months! She was in it for the life insurance money ... he was in it for love.The Sheriff contacted the "victim" to inform him of the goings on. Of course, he had no idea. Donna and her scanner potentially saved his life by mere hours.

For those with an eye for technical detail, the scanner was a Radio Shack PRO-2030 tuning in the range 46 - 49 MHz.

"News Briefs" looks at communications news items that appear in the mainstream media. Thanks this week go to "The Memphis Commercial Appeal" via Internet. If your local or regional paper runs an item of interest to Radio Amateurs, why not send a clipping to the Divisional Office?

--Richard Murnane VK2SKY

Contest News

To all Radio Amateur organization
To all Radio Amateurs of the world

We have the pleasure to send the rules of traditional 39th CQM International DX Contest 1995 and "Pobeda" (Victory) award and invite all radio amateurs of your country to participate in these events. These rules are enclosed.

We kindly ask you to publish these rules in your magazine and information materials.

Thank you very much in advance and wish you and Radio amateurs of your country Happy New Year, 1995.

With best regards and 73,
Chief of the Krenkel Central Radio Club of RF
V. Bondarenko UV3BW

****

The "Pobeda" (Victory) Award

is sponsored by the Krenkel Central Radio Club of RF on the occasion of the 50 years of Victory of the soviet peoples over

German fascism (1945 - 1995 years).

This award is available to all licensed radio amateurs and SWLs for contacting radio stations of Russia during 1995 year (1.01.1995 - 31.12.1995).

Requirements follow:

- for radio amateurs - veterans WW-II - 10 different QSOs;

- for other radio amateurs - 50 QSOsd with different radio stations of Russia, including 5 QSOs with radio amateurs - veterans WW-II.

There are no band or mode limitations.

The "Pobeda" award is issued free of charge. Send applications, signed by two radio amateurs, to the Krenkel Central Radio Club of RF: P.O. Box 88, Moscow, Russia.

****

CQM Contest

For further details concerning bands, categories, points, multipliers, scoring of awards ...

Contact the Divisional Office, or send stamped self-addressed envelope to P.O. Box 1066 Parramatta 2124 ... which is of course the Divisional Office ... Members may call for a fax copy on 689-2417. If unattended, leave a message on the answering machine.

IPS Report

IPS WEEKLY SOLAR AND GEOPHYSICAL REPORT
ISSUED 06 JANUARY 1995
FROM THE REGIONAL WARNING CENTRE SYDNEY.

SUMMARY (30 DECEMBER - 05 JANUARY)

DATE 30 31 01 02 03 04 05
10CM 77 77 75 77 77 77 76
A 8 4 3 17 18 16 (15 ESTIMATED)
T 37 30 7 -10 2 18 18

SOLAR ACTIVITY WAS LOW ON 3RD-4TH JANUARY, AND VERY LOW FOR THE REMAINDER OF THE PERIOD.

THE GEOMAGNETIC FIELD AT LEARMONTH (WA) WAS QUIET TO UNSETTLED ON 30TH DECEMBER, AND QUIET ON 31ST. THE FIELD WAS UNSETTLED TO ACTIVE 1ST-5TH JANUARY, WITH A MINOR STORM PERIOD 06-09 UT ON 3RD.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR PREDICTED MONTHLY VALUES EXCEPT FOR 2ND JANUARY WHEN FREQUENCIES WERE ABOUT 10 PER CENT BELOW PREDICTED VALUES. THERE WERE POSSIBLE DEGRADED CONDITIONS DUE TO BLANKETING SPORADIC E AT TIMES ON 31ST DECEMBER.

FORECAST (06 JANUARY - 12 JANUARY)

SOLAR: VERY LOW

GEOMAGNETIC: MOSTLY UNSETTLED WITH BRIEF ACTIVE PERIODS POSSIBLE.

IONOSPHERIC: NEAR NORMAL CONDITIONS EXPECTED.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

SUMMARY BY PAT VK2JPA ANARTS BROADCAST OFFICER

Coming events

Now, a summary of upcoming events of interest to members and other Radio Amateurs and Short Wave Listeners ...

Please note that the Divisional Office will be closed this month; however, you can still call us, as the phone has been redirected to a duty Councillor.

ANARTS broadcasts resume . . . . . next Sunday
Live ATV transmissions from Gladesville ARC resume . .18 January
Divisional Council meeting . . . . . .20 January
Australia Day. . . . . .26 January
Divisional Trash and Treasure. . . . . .29 January
AATC combined committee/general meeting. . . . . .29 January
Divisional Office reopens. . . . . ?? February
WIA Federal convention . . . . . .3 February
Chifley ARC classes begin. . . . . .5 February
Bathurst Car Rally (WICEN--contact Alan VK2YYJ). .25-26 February
Central Coast ARC Field Day at Wyong . . . . . 26 February
New licence fees to be finalised. . . . . .1 March
RTA Big NSW Bike Ride (WICEN). . . . . .4-11 March
Daylight Saving Time ends. . . . . 5 March (?)
Bungonia Cave Rescue exercise (WICEN). . . . . 18-19 March

If you have an event you'd like publicised on the weekly broadcast, then please send details to the Divisional Broadcast Officer, Michael Corbin VK2PFQ, by phone on (02) 626-9288, or by fax on (02) 626-6066.Items can also be forwarded to the Divisional Office before close of business on the Friday before the broadcast.

In fact almost every summer 9K2ZR or 9K2MU is worked from the Netherlands or
Germany. So if Faisal becomes *really* active I reckon that we must be
able to work him this forthcoming summer via 2 hop Es.

Of course Novice was severely restricted, but that didn't assure that
they didn't interfere with others. There were many harmonic rich signals
on the Novice bands. Only 40 meter Novice operation had some assurance
that the harmonics would fall inside another ham band. Most Novices had
little idea how to check for out of band emissions, or what to do about
it if they found some. And most Novices had little idea of what electrical
safety really meant, probably most Generals didn't either for that matter.
The rules and regs portion of the exam was better than what we have today,
but was still not nearly comprehensive enough. Remember, Novice was only a
25 question test, given by a General volunteer, even then.

>Beyond that, the Novice
>Class license term was one year and it was not renewable, so everybody was

>their General Class exams. Passing them required doing such outrageous
>things as actually knowing regulations and theory and drawing circuit
>diagrams with component values. (Code speed came up virtually
>automatically by just being active.)

I'd say BINGO! to your parenthetic statement. My contention has always
been that for those who want to use Code, tests are irrelevant. For those
who don't use Code, which is the majority of amateurs, it's irrelevant too
since there's virtually no danger that they will be sending bad Code.

>The Extra Class amateur license test was more difficult by the way. It
>was reputed to be the toughest exam the Commission gave. Lots of us had

>> content of that exam should be in another message.
>
>"Irrelevant" is your opinion and as we've discussed before, a lot of us
>disagree with that perspective.

See above. Code speed is only relevant to those who use Code, and since
to use Code a person has to work up a goodly speed, the speed test is
redundant. The fact that they are successfully using Code is all the
evidence needed that they know Code. A separate government test element
is not required. This is *exactly* the same as with any other operating
mode. If the person is successfully performing with any mode, they have
the necessary competence. If they don't have the competence, they can't
successfully operate. It's completely self-limiting. Operating mode tests
of any kind are redundant.

>The examination elements cover virtually
>all aspects of the hobby and some might be termed "irrelevant" with as
>much correctness as you've used for the code. Everything in the exams
>that doesn't interest me or that I don't intend using on the air is
>irrelevant, but I learn it anyway if I expect to pass the test. You might
>have the technical comptetnce to come up with a way to "phone home to ET",
>but like it or not, if you want an Extra Class ticket, you're going to
>have to pass the 20 wpm code test.

Not if my proposal is accepted. :-)

Morse speed testing is treated differently from any other operating
mode. You *can* miss every question on satellite operations, or every
question on RTTY operation, etc, but if you do well enough on the rest
of the exam you can still pass. With Morse testing, no matter if you have
a perfect score on other elements, you have to pass the separate Morse
speed element. That to me is neither logical nor proportionate.

>Your proposal sounds similar to what the ORACLE group down in New Zealand
>wants. They are lobbying for testing only those things that the license
>applicant feels are relevant to them and suggest such things as
>(this is a quote) "keyboard skills". Can they mean taking typing tests
>to get an amateur radio licnese?

Probably. It's as relevant as a Morse speed test, IE neither is relevant
to the government's interests in licensing amateurs. The government's
interests in licensing amateurs are to assure they know how to be legal,
safe, and non-interfering with other services. Unique callsigns are
issued to ensure accountability for those cases where amateurs fail
to operate legally and on a non-interfering basis. Passage of the tests
removes the excuse of ignorance of the law or technical requirements
from those who are found in violation.

>I support restoring the principle where having advanced copies of tests or
>question pools constitutes cheating and disallowing VEC's having any
>control over test content. There was also nothing wrong with the
>licensing structure and associated privileges that existed before the
>"Novice Enhancement."

No, I disagree that there was nothing wrong with the old structure.
There were several things wrong. The emphasis was on rote memorization
and a mechanical skill (still is). Neither is of much value over the life
of the average amateur licensee. That's why I advocate a comprehensive
open book exam. I think it's much more important for the applicant to
demonstrate the ability to find out answers on their own from the standard
references than to regurgitate some cram session material that may be
outdated tomorrow. That's a skill that will be useful for life, unlike
some rote memorization that's forgotten as soon as the test is over.

What good does it do the licensee to memorize the rules when the rules
change every so often? It's much better that they be required to demonstrate
that they know how to find the answers from a current copy of the rules,
than that they can memorize some soon to be outdated information. The same
goes for electrical safety and electronic theory. Memory is leaky and often
faulty. The ability to access and interpret the information in references,
on the other hand, is of lifelong value. Albert Einstein said that it was
counterproductive to clutter your mind with memorized trivia when that
information is readily available in handbooks.

442. sm415 and a gravis sound card

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-09 14:54:08 UTC
From: wapembe@clark.net
Message-ID: <3erimg$4rf@explorer.clark.net>
Source record: 253592

I am trying to interface a gravis ultrasound card to supermorse 4.15. All I can get the software to do is hang which requires a ctrl-alt-delete to break out of. As far as I can tell I am using the correct settings but I may be misunderstanding the documentation on this. Here are the settings for the soundcard and for the sb emulation string:

ULTRASND=240,1,1,11,5
BLASTER=A240 D1 I5 T1

I have tried various values for the soundblaster T variable but have the same results with each one. System hangs and requires a reboot.

The gravis card works fine and passes all diagnostics. Other software will interface correctly with it.

If someone has been successful getting these two to talk, I would appreciate hearing from you. I would prefer a followup to this newsgroup but if you prefer to email me I will repost for you. thanks for your help.

Hi Andy,

I have done this lots of times, so here briefly what to do:

get for test equipment a RF probe, made from a small capacitor
and a diode (fast Si or better Ge)

Locate in the radio the frequency multipliers. Most likely
they will be coils with ferrite cores to adjust. Diagrams
are very usefull here, but strictly not neccesary.

start from the oscillator tuning the multipliers, for max.
signal, if you arrive at a wrong multiple, your frequency counter will
help.

Once you have done the multipliers the dificult part is to tune the
rx front end. This may require another radio close to your work place,
use as an signal indicator the AGC, or the RF probe, than you have
to supply a strong RF sig, though.

Well the TX wants tuned for max. output (of cause)
watch that it does'nt get funny, like self-oscillation. If the power
jumps insted of changing smoothly when adjusting, you know it is
not right.

Good luck, Moritz DL5UH

447. Is RF "fingerprinting" possible????

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-09 16:05:14 UTC
From: helliott@losat.redstone.army.mil
Message-ID: <3erqd9$b6d@ra.nrl.navy.mil>
Source record: 253597

We have a local ham, or maybe a ham radio thief, who is being very malicious and trying very hard to damage some repeaters (listening to the control op on simplex and decoding tones, then trying to use tones to screw up the repeater) and get the operators in trouble (calling 911 at night and hanging up etc). This clown seems to get off on chunking the repeater and generally iritating everyone.

My question to this esteemed panel of experts is, does RF fingerprinting really work? I have heard people talk about RF fingerprinting, but I have never seen anything in print. Can we buy/borrow/rent something that will identify the culprits radio and begin to build a case against him? (or her???) Who builds this kind of equipment, and what is its technological basis? Is there a wing of the FCC that can provide this sort of service? Who do we call? (jerkbusters?) If anybody has any info, it would be appreciated.

It seems that most foreign call issuers don't have the same list of 'forbidden' calls that the FCC has.

I have a card from VP5FUX. This was back in the early 80's. I have wondered if this was issued at random or chosen by the operator as an editorial comment about getting a license in VP5... 8-)

A friend told me of a program that's been developed in Europe that will make a computer emulate the Baycom modem without a modem, using only an op-amp type interface. It's supposedly a device driver that runs in front of the Baycom software. The filename is supposed to be embaycom.zip and it's about 4.7 KB.

An ARCHIE search showed no results. Does anybody know where this might be available for anonymous ftp? Thanks

ARRL publishes a listing - a couple a bucks from them or your local ham store. It mostly includes wide-coverage (in terms of geography) nets. 1000's of local or regional nets (especially VHF/UHF) are not gonna be there. I have a copy at home and would be willing to look up something if you like, but it's a worthwhile investment to pick up your own copy.

I didn't have a lot of problem with the DMV in California. When I got mine, I had to say "amateur radio" two or three times, but then the knowledgable person came and walked the person at the counter through it. Of course, I got the wrong plates in the mail, and had to go back and straighten it out, but again, no big problem.

My partner had even less trouble, since the person behind the counter knew exactly what we were talking about, whipped out the form, asked to see her license, and the plates appeared, eventually, in the mail.

455. Re: Why are we called HAMS???

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-09 18:30:00 UTC
From: n5ljv@uh.edu
Message-ID: <9JAN199512304013@rosie.uh.edu>
Source record: 253605

I REALLY think that the only poeple that are remotely eligable to comment on this topic are the guys (or gals) that were licensed prior to 1920 (or so). I have spoken to several of these hams, and are close friends with a couple, and they appear to be the leading authority on alot of "where did this come from" topic. :)

But, let me toss my two cents in and tell you what and where I heard the story about "why are we called hams". Notice I didn't write HAMS becuase it is incorrect -- as it IS NOT an acronym -- never has been. Anyway, I received my license when I was 14 years old. I recall getting my general class ticket when I was a sophomore. That year, when I was in the library doing some "research" I thought it would be fun to see if they had any books on ham radio. Well, they sure did -- two of them.

My favorite one was called _So You Want to be a Ham_. This book was published in the 1960's by a Wx??? call -- old timer. The book opened with an explination of why amatuer radio is called ham radio as a nickname.

The author explained that back in the early 1900's (or late 1800's, I can't recall too well) CW was still the only mode of communcation for amateur radio operators. And, since CW was the only mode, most amateurs were quit good at sending CW. Now, when someone had trouble sending code, or had a bad fist, he was called a "ham" by the fellow amateurs.

This reminds me of something we do today. When we encounter a person who operates poorly we call them a "lid" -- meaning poor operator. I've been doing this for years, and it has carried over into my "non-ham" life. Now my non-ham friends call ME a lid because I've called them a lid many time before!! :) Except for one of my friends who's name is Sid, and he thinks I am making fun of his name, so I don't call him that anymore. Anyway, I'll stop rambling.

That's the BEST explination that I've heard (or read) so far. If anyone has anything better, and can back it up with a source, let me know... I would love to hear it. 73 for now....

>from England. I have two questions, 1) are there other keys that I should
>be looking at, 2) has anyone any comments on the above keys?

Congrats on the upgrade, by the way.

I use a Bencher, and am quite satisfied with its performance. I have also
used the Vibroplex Brass-Racer , and think that it has a nice feel to
it as well. Sending with a paddle is a personalized thing; no one key can
be said to be superior. It depends on how YOU feel using it. My advice would
be to get some hands on with the paddles you're considering and decide for
yourself. From the brands you mention, I don't think you can go wrong.

>It's not new... I've seen this happen before...10-15 years ago...

Happens all the time, even today. Most of the time, it is one extra
card, but I have gotten two extra.

One ham who I forwarded a card to was so appreciative he sent me
a handwritten note of thanks in the return mail.

>I must agree that it curely would have been a nice (at least) gesture
>for the QSL manager to have included a note requesting your assistance
>in forwarding his QSLs. Unfortunately, we see all too little courtesy

>have copied (either manually or mechanically) for sending to those whom
>he expected to perform the gratis forwarding.

Ah, but it is not always the fault of the manager. Once, a note came
with the extra card, and it asked me (in broken English; since I am not
native English speaker either, I could read it perfekly :-) to please
forward it since the recipient sent neither SAE nor postage!

These for-forwarding-QSLs don't bother me one bit. Just another part
of the hobby of making more friends.

I am planning my first visit to a hamfest/flea in the near future.
Any hints as to how to snag the best deal, what is the accepted mode of
depleting my bank account (greenbacks, checks (cheques), VISA/MC),
warning signs on equipment, what equipment I'll be better off
buying at my friendly neighborhood ham store, etc. etc. etc....

I'm looking for HF gear. At present my HF shack consists of:

1. Table with chair
2. AC wall outlet
3. Nearby tree (I live in an apt.complex)
4. A thousand tools (drill, soldering iron etc)

So I need to get *everything*. (not necessarily all at the flea market)

Present class (6 days old) is Tech plus. Plan to move up to General and
then Advanced at a fairly quick pace.

Main interest is working DX.

I hope I have provided enough information.

tnx de ke6prl

: |> info, it would be appreciated.

: We had a similar problem a year ago. N1JBC, a local blind kid, had
: nothing better to do than jam people. To combat the problem, I invested
: a little bit of cash into a Motron electronics RF fingerprinting device
: and a doppler tracking system, mainly to see how they worked.

: RF Fingerprinting is definitely not an exact science. The theory is
: sound, ie: each radio has a unique inherent destabilization of the
: RF signal upon keyup, and if you can measure that, you have a good
: measure by which to "fingerprint" each radio.

: Unfortunately, unless you have a spectrum analyzer at the source,
: you're measuring a transmitted signal. The motron device looks at the
: FM passband (15khz) and measures where a received signal is in the
: FM passband for 25 cycles @ roughly 10ms/cycle, for a quarter second
: total. So, theoretically, as someone keys their radio, and their
: radio transmitter stabilizes itself in the frequency passband, you
: can get a "fingerprint". You can then compare that fingerprint against
: others.

: Although the overall result is good (i.e. you get a pretty consistant
: signal from each person's radio) often there are minute voltage
: flucuations that cause the fingerprints to be different. So, what
: you end up doing is comparing fingerprints in general terms, not
: specifics, similar to how the police do fingerprint comparisons.

: Using the motron device, what I've found is this: it is a good way
: of *eliminating* people from consideration in jamming problems. If
: you're pretty sure who the person is, the device isn't useless,
: but you can save yourself the cash. The motron device has been more of
: a deterrent than anything else around here -- I take it out, show it
: around on display at club meetings, so nobody messes around anymore.

Of course, the way around that would be to shunt the RF into a small dummy load for 1/4 second or so right after key-up, then let it out onto the air, eliminating the stabilization signature...

463. Re: Tire QRN, how to cure?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-09 22:34:12 UTC
From: mike@shien.ist.csuohio.edu
Message-ID: <1995Jan9.223412.25812@news.csuohio.edu>
Source record: 253611

Regarding the recent discussion about QRM caused by static
electricity generated by car tires.

Quoted from "Sunday" magazine, Cleveland Plain Dealer, January 8, 1995,
under "News Of The Weird", p. 4:

"In September, the makers of Michelin tires said they would reformulate
a substance used to make new-model tires grip the road better on wet
pavement because the old formula permitted a buildup of static electricity.
For moths, attendants on the Illinois Tollway had reported taking
measures to insulate themselves every time new Honda Accords (which
feature the new Michelin tires) stopped to pay tolls. Some attendants
even refused to accept money from some drivers for fear of shocks."

Mike

I don't think what you are considering is all that worthwhile. The
concept of fingerprinting for identification is based on two things:
(1) the presumed unique character of a fingerprint
(2) the existence of two sample prints, one of which is known to be that
of a known person and the other is known to be associated with the
crime.
It will usually be tough to find some characteristic of a radio which
can really be shown to be unique, and not just characteristic of that model.
If you have the offending radio to discover that it has the characteristic
you noted off the air, usually you will have enough additional evidence
to show who did the interference, without going through any other tricks.
Direction-finding and monitoring are the main ways you have to use to
catch these people. Few are as lucky as a Columbus policeman-ham friend
(WD8RIH)who had his handie-talkie stolen from his pollice car. He observed it
with his call-letters plainly visible, hooked on the belt of the thief, a
spectator at another police run my friend made a couple of weeks later.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 09/2330Z JANUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 09 JANUARY AND FORECAST FOR 10 JANUARY - 12 JANUARY

1A. SOLAR SUMMARY
Activity: very low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 74/11

GOES satellite data for 08 Jan
Daily Proton Fluence >1 MeV: NA
Daily Proton Fluence >10 MeV: 9.9E+03
Daily Electron Fluence >2 MeV: 3.0E+08 (moderate)
X-ray background: A1.7
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
10 Jan 11 Jan 12 Jan
Activity Very low Very low Very low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 10 Jan: 72/8

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: quiet

Estimated Indices : A K Observed A Index 08 Jan
Learmonth 6 2222 1122
Fredericksburg 7 7
Planetary 7 7

Observed Kp for 08 Jan: 2212 2221
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
10 Jan 18 Unsettled to active
11 Jan 18 Unsettled to active
12 Jan 10 Quiet to unsettled

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND
DATE LOW MIDDLE HIGH

09 Jan normal fair-normal fair-normal
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
10 Jan normal fair poor
11 Jan normal fair poor
12 Jan normal normal fair

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
09 Jan 16 enhanced 20% during local day, depressed by up to 25%
during local night.

Predicted Monthly T-index for January: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
10 Jan 10 Near predicted monthly values
11 Jan 10 Near predicted monthly values
12 Jan 10 Near predicted monthly values
COMMENT: Degraded HF comms were possible during local night last
night. Further degradations during local night can be expected over
the next few days. Blanketing Sporadic E was observed last two hours of
UT day at Sydney.

: time and money to get into???

As a follow on to Cleve's question: If I'm considering a radio should
I think all-mode or is FM pretty active. The difference in price is
pretty dramatic (all-mode starts ~$1k new...FM can be had for about
half that or less new). I realize that the used market is out there
but there doesn't seem to be a lot of radios that have 6m on them.

Any thoughts? Jey

Everyone check your FAR's. FAR 91.21, which applies to all pilots
reads as follows:

a) Except as provided in paragraph (b) of this section, NO person
may operate, nor may any operator or pilot in command of an
aircraft allow the operation of, any portable electronic device on
ANY of the following U.S. registered aircraft:
1) Aircraft operated by a holder of an air carrier operating
certificate or an operating certificate; or
2) Any other aircraft while it is operated under IFR.

b) Paragraph (a) does not apply to:
1) Portable voice recorders;
2) Hearing aids;
3) Heart pacemakers;
4) Electric shavers; or
5) Any other portable electronic device that the operator of
the aircraft has determined will not cause interference with the
navigation or communication system of the aircraft on which it is
to be used.

c) In the case of an aircraft operated by a holder of an air
carrier operating certificate or an operating certificate, the
determination required by paragraph (b)(5) of this section shall
be made by that operator of the aircraft on which the particular
device is to be used. In the case of other aircraft, the
determination may be made by the pilot in command or other
operator of the aircraft.

Bottom line: the Pilot In Command is the FINAL authority of what
can be used on their aircraft. However, the FAA and the company
that the PIC works for can and has set limits as to what the PIC
can authorize. Therefore, the PIC on a commercial flight can
restrict your use of equipment further than company rules, but not
relax them. There are NO carriers in the US (to my knowledge)
that allow ANY type of transmission device. Therefore, the PIC
can't allow it, either.

Wait till you get on the ground at your destination.

- Pete WB0FEW and owner of N205PL

PS. The FCC restricts the use of cellular phones to ground based
operations.

>I support restoring the principle where having advanced copies of tests or
>question pools constitutes cheating and disallowing VEC's having any
>control over test content. There was also nothing wrong with the
>licensing structure and associated privileges that existed before the
>"Novice Enhancement."

you forget about organized efforts like Bash and the ARRL pubs that contained
information about what the test was probably going to be like. yes, the
ARRL didn't do the organized data collection that Bash did, but i would
seriously believe they would listen to feedback about what was or wasn't
on a given exam.

public question pools solve that problem. they also permit everyone to
check up on everyone else as far as cross checking exams from different
VECs go. It's OK for the FAA..and aren't the commercial exams like
this as well now? (with published question pools and all that).

Now as far as 1987 novice enhancement -- yes there was something wrong.
Upgrading to Tech from Novice lost your Novice privileges. somehow
when the tech was created it wasn't seen as a step on the staircase, but
as a stub on the tree trunk. that's fixed now.

as far as someone providing advanced copies of a specific exam for review
before it's taken by the candidate, i would agree that sounds like cheating.
if you have specific information of when and where this occured, i'm
certain the VEC groups would love to hear the details and would take
action to stop the practice.

that reminds me, it's time to make up some new exams that come from the pool
but yet are something that's probably never been seen before thanks to the
personal computer and laser printer.

482. Radio Hams Wanted- Aberdeen U

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-10 05:35:47 UTC
From: leonmac@ccnet.com
Message-ID: <3et6bj$le6@ccnet3.ccnet.com>
Source record: 253632

In 1995, the University of Aberdeen in Scotland will celebrate its Quincentenary - it was founded in 1495 by Bishop Elphinstone under the patronage of King James IV of Scotland. At this time, there were only four other universities in Britain - St Andrews and Glasgow Universities in Scotland, and the Universities of Oxford and Cambridge in England. The next quincentenary to be celebrated by a British university will be towards the end of the next century, so this marks a very special event in our history.

The University intends celebrating its 500th anniversary by a series of events held throughout the Highlands and Islands of Scotland, but would also like to give the opportunity to those in other countries to join in our celebrations. As part of our celebrations, we will be hosting an international amateur radio link, whereby, using a special call sign GB500AU, amateur radio users throughout the world will be able to call us at the University to join us in celebrating our Quincentenary.

To this end, a special events station will be based in the University, and will operate between 9.00am and 5.00pm GMT from 10 - 12 February and from 9.00am and 9.00pm from 13th - 16th February, both dates inclusive. February 10 has been selected as the starting date as this is "Founder's Day".

The team manning the equipment will be able to send and receive on the 80, 40, 20, 15, 10 and 2 metre bands.

Further information can be obtained from Donald Paterson, Centre for Continuing Education, Aberdeen University, Scotland. Email ADE011@Aberdeen.ac.uk Or fromThomas Wratten - GM4 CAU

I had a problem with this while running JNOS. Several versions and on
both a 286 and a 386sx. Finally, I removed both Microsoft Mouse and DOSKEY
from the autoexec.bat file and the problem went away.

>Eletronics, from Soquet, but it's FCC Class A.

But then you'd need an external TNC, or at least a modem.

More interesting, I think, would be to use a PCMCIA *sound card*, and
do the modem, HDLC, and other TNC functions completely in software.
This could be done either on the host or (for some pcmcia sound cards
that contain programmable DSP's), the modem functions could be
offloaded to the pcmcia card itself.

486. DCI Address + Tel. # ??

487. Transistor Radios Still Wanted

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-10 06:40:46 UTC
From: ap451@yfn.ysu.edu
Message-ID: <3eta5e$lul@news.ysu.edu>
Source record: 253637
Cross-posted to: rec.antiques.radio+phono,rec.collecting,misc.wanted,misc.forsale,rec.radio.swap,rec.radio.amateur.misc

I'm still looking for old 50s and early 60s transistor
radios. These are the small kind made of plastic (sometimes with
metal trim) and were usually made in the US or Japan.
Let me know what you have by emailing me information...
the name and model number (if you know it), whether or not it
works (hopefully but not required) and has the box (not necessary
but adds to the value). If the radio is in poor physical shape, the
value is much less from a collecting standpoint. I'll pay $10 to
$40 for most radios, but a few radios may merit far more
(Sony TR-55 and TR-63, Regency TR-1, Toshiba 5TR-193,
for examples).

Keep me posted with asking price if possible; thanks again; and 73
de WA4FJF.

488. Do NTSC TVs work on 50 Hz power?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-10 07:21:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2F12360C@smtp>
Source record: 253638

Sure they do!
And your NTSC TV will show you pictures, in B/W, with no sound!
Most equipment built these days does NOT derive clock signals from the power, so dont worry.
Best thing is to get just a PAL tuner and converter (about $500) and connect it to your VCR and TV. Or sell it all and get multi-standard equipment from places like 47th street photo in New York.
Best,
Peter KC1QF (living in Belgium).

489. 20m sched wanted for Atlantic Maritime Mobile

I will be crewing on an Atlantic yacht delivery in the next few weeks. It will be either from South Carolina to the Caribbean or from France transatlantic. Where and when is not set yet but the trip may start on short notice. I will be leaving by the end of this month.

I am hoping to track down a group of few amateurs willing to keep an informal sched with me on 20m. I will be packing an MFJ 20m qrp ssb travel radio and a dipole. I have the idea that my 10 year old son Adam will pick up email here for me so the kids can post the position we are at on the world map. Should be fun.

Interested? Let me know at kwalker@qb.island.net. Call will be VE0MUK/MM. Home call is VE7KGW.

73 de Ken.

Dear Bob,

I am not a wise old DXer. Since Sep'94 I am back on the SW-Bands (40/20/15/10m)
and the reason, why I know all the data before I start to call in a pile-up is
very simple. I am just running a 25 years old tranceiver with 120-180 watts and
a simple trapped groundplane (Made in Germany :-). With this simple equipment
I got rabbit ears and I have learned to hear what's going on ...., hi, hi.

(Sorry for my English :-)

Have fun .. 73 de DK3VN

: Canada, or not?

Yes under the same limitations as your license back home so if are limited
to above 30 mhz by virtue of your license then you are entitled to operate
above 30 mhz in Canada , The only confusion I can think of and maybe some
one else will answer is can a general in Canada operate through out the
bands or is he/she limited to the same portions as if it at home?
Hmmmmmmmm......
I know that when traveling in the US I am limited on the HF bands from
operating below 14.150 on phone.....as an example......
Hope this answers your question

This is a problem common to all DOS machines. The crux of the problem
is that the PC's hardware clock is only read at boot time (by MS-DOS).
After that the Time-of-Day clock is updated by a software interrupt
which simply adds a clock tic to a counter which is, in fact the TOD
clock. If your system is 100% CPU bound, as it surely is running a sat
tracker, there is little spare time to update the TOD clock. A possible
solution would be to write a TSR to re-read the hardware clock and
update the TOD clock.

Another possible solution is to run your sat tracker under Linux,
Windows NT or OS/2 since they do not suffer from this brain damage.
I run SatTrak 3.8 under Linux and NT with no worries.

Best,

dave

Re: RF fingerprinting

Absolutely! It has been used by intelligence agencies for decades as one method of confirming the identity of intercepted signals. However, as Gerry points out, there are many obvious questions regarding the validity of the "id" in a legal sense. But, is it possible, and technically feasible; without question.

What we have here is a simple failure to communicate...

All of the Techs are getting 1x3s (except where they are depleted). Then,
there's always me, who has a 1x3 despite my extra status. It has a nice shock
effect when people run my callsign through the database.

I never upgraded because:

1) I had ham plate, hats, cards, etc. that would have been wrong.
2) I missed WZ9Z by a few weeks, and didn't want an AA9?? call...

There was an article published in a December issue of 73 two or three years ago (1992, I believe) that was a comprehensive run-down of the various CW paddles available at that time. I eventually got a Jones Key-- it was the only one heavy enough not to dance around my desktop. Perhaps I should mention that I'm a former bug user, so my fist may be more 'ham-handed' than those who first learn on a paddle.

73,

All iambic keyers exibit the first part of your description, press one side and you get a string of dits, press the other side and you get a string of dahs. If you press both paddles at the same time, you get alternating dits and dahs. The string starts with whichever side you press first. For instance, if you press the dit paddle, and then while the first dit is going, you press the other paddle and then hold both, you get alternating elements with a leading dit.

The two modes, A and B, refer to what happens when you release the paddles. I can never keep straight which is mode A or mode B, but one of the modes stops at the end of the current element, while the other sends one more element of the other type. The timing is quite critical on when you press the paddles.

To send a Q for instance, - - . -

One mode: Press the dah paddle, hold until the second dah, quickly press the dit paddle while still holding the dah to insert a dit after the second dah. Release the dah paddle while the last dah is going.

Other mode: Almost the same, except if you hold the dit paddle a tiny bit too long, you get another dit after the final dah. (I think I got it right)

The difference between mode A and mode B is subtle in how you have to handle the paddles. The second mode drives me crazy, I like the first. This is a personal preference sort of thing. With the wrong mode, I insert extraneous elements.

505. FCC electronic filing bogus! Takes 4-6 weeks !!!

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-10 19:28:26 UTC
From: copeland@fohnix.metronet.com
Message-ID: <3eun4q$jkv@fohnix.metronet.com>
Source record: 253654
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.policy,rec.radio.swap

I passed no Technician test on 1/1/95 and paid $3 extra for the new
electronic filing that is supposed to take less than one week to
receive a liscense. I just contacted them to get my call letters and
was told they don't have an electronic feed yet and so the wait
will be 4-6 weeks even though I filed electronically !!!

Looks like there is no point paying the extra $3, since it will take
the same amount of time regardless.

Typical government agency, dragging their tail and taking forever
to get things done.

: will be giving exams in the near future?

: I am ready for my no-code Technician's exam anytime soon, and would like
: to get my ticket SOON so I can use my 6m R/C gear!

As a followup to my own post...

I've had several responses, and the summary is to call the Sunnyvale VEC voice recorder line, at 408-255-9000. Apparently there are monthly exam periods at the Ampex cafeteria, and the next two scheduled ones there are Jan 21st and Feb 18th.

Now if I can only get through to the message line, it's busy!

Thanks for the help!

Perhaps if it does the 15m/10m split the 15m link can be put in the
general portion of the band rather than the advanced portion like the
previous one did so more hams could use it. However, as I write this
I'm reminded of a thread here about the incentive licensing structure.
Maybe this is some incentive to advance. Maybe! But not much. Since
I dont chase DX there is no reason to upgrade at all!!!!

>Any hints as to how to snag the best deal, what is the accepted mode of
>depleting my bank account (greenbacks, checks (cheques), VISA/MC),
^^^^^^^^^
I suggest, if you want to buy a big ticket item you bring the cash. My
experience has been most hamfest sellers want green. Not checks. You can
use the VISA/MC at the commercial vendors however, so don't leave them at
home.

>deleted<

>So I need to get *everything*. (not necessarily all at the flea market)
>more deleted<

I would suggest you find an Elmer before you go. You need someone who
can look at equipment and determine the value to you more than the value
of the equipment. You may not need a TS-950SDX just yet (don't expect you
to find a used one there anyway.) but you could find plenty of useful
gear.

Another suggestion is to go in armed. Get a copy of Ham Trader's or look
into QST or CQ want ads and see what the equipment is going for. You may
have to pay more or less depending on the person you're dealing with but
at least you want pay $700 for an HW-101 - MINT.

Have fun, spend some for me.

I'll second Gary's recommendation of S-Com. The 5K is a really nice
controller for most applications. If you need a phone patch, the 6K
has a phone patch option. The 7K adds voice features (which I am not
too wild about, but a lot of folks seem to enjoy). Delay line options
are available on all of them, I believe, which eliminates the squelch
tail noise.

The fellow who runs S-Com is very responsive and prodices a nice product.

Grady Ward says:
" Richard A. De Castro (decastro@netcom.com) wrote:

" : >For national park use - a transceiver modified to xmit in the bands
" : >the rangers use. Again, life or death.

Not to detract from the other thread about "kerchunking" (which was RIGHT
ON... it really DOES piss off the feds!)

If you want to reduce part of the problem use a commercial grade
(type approved) radio for the ham band rather than a modified ham radio
on the pub safety band. then you at least reduce the charge of using
non-type approved equipment to, maybe, harmful interference and
transmitting without a license.

Remember the guy in San Diego County who broadcast on the S.O. freq to
request medical aid for a crashed mtn. biker with a severe head injury.
He was out of range of ham rptrs but was able to access the Sheriff's.
He had his radio confiscated and was facing possible criminal charges.
The DA decided to drop the charges when faced with public outcry.

I don't recall if the FCC stuck him with a fine or not. Anyway, he lost
he radio although hams in the area offered to replace the one commandeered
by the San Diego Sheriff.

" : Aside from the legal issues, which we thashed out a week or two ago, how are
" : you going to get the repeater frequencies? Most frequncy books don't
" : have the input frequncy or the CTCSS/DPL code, and even most of the few
" : that have them don't give you the correct pairings.

Guess you're using the wrong freq list...
Many of the California ones DO offer just that information. (and we
appreciate it VERY much)

Another option that I really don't recommend is to carry an ELT or EPIRB.
It may take a few more orbits of a satellite to pinpoint your location
but it would certainly bring a few folks within range of your handheld.
Maybe you'd want to try to talk to the CAP on 148.150 Mhz when they get
within range.:)

Uh... you didn't hear that from me :(

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

1995 YOUNG HAM OF THE YEAR AWARD
NOMINATING PERIOD NOW OPEN

The nominating period for 1995 "Young Ham of the Year Award" is now open. Originally known as the "Westlink Report Young Ham of the Year," this award program, now entering its ninth consecutive year, is presented annually to a United States licensed Radio Amateur (Ham) who is 18 years of age or younger and who has provided outstanding service to the nation, his community or the betterment of the state of the art in communications through the Amateur Radio hobby/service.

The Young Ham of the Year Award program was conceived in 1985 by then Westlink Report "Editor-in-Chief" Bill Pasternak, WA6ITF. His desire was (and still is) to highlight the accomplishments of the nation's many young radio hobbyists, and to encourage the entry of more young people into the exciting and rewarding hobby of Amateur Radio.

With the absorption of the Westlink Report readership base into Worldradio Magazine, the awards originator has decided to continue it under the banner of his own "Amateur Radio Newsline" organization in the hope that this real-life experience will lead the award winner and many other young hams into careers in the sciences and technologies.

Any continental United States (FCC licensed) ham radio operator aged 18 and younger who have used Amateur Radio to significantly contribute to the benefit of the service, to the sate of the communications art, to their community or the nation are eligible to be nominated.

All nominations must be submitted before April 30, 1995 on an official application available for a self addressed stamped envelope to the 1995 Young Ham of the Year Award % Newsline, 28197 Robin Avenue Saugus California 91350. These nominating applications are also available electronically with an E-Mail request to: BILLWA6ITF on America Online; B.PASTERNAK on GEnie or billwa6itf@aol.com via the Internet.

The U.S. Amateur Radio Service is a force of over a half-million publicly spirited, licensed individuals who have passed federally - mandated examinations to enter the fraternity. The Service is maintained by the Federal Communications Commission for the purpose of maintaining a pool of trained radio operators and technicians, to assist the United States in improving international relations, and to have available a large and voluntary group of public service-oriented

individuals with their own radio equipment who are available in times of natural or other disaster.

The Amateur Radio Newsline, better known as "Newsline" is the worlds largest non-profit and totally independent ham radio broadcast news and data information service organized in 1976 by Jim Hendershot WA6VQP and Bill Pasternak WA6ITF. Since that time it has produced and put to air over 900 consecutive weeks of news bulletin programming dealing with Amateur Radio and allied personal communications issues. It also distributes a text version of its newscasts to ham radio operators worldwide via posting on America Online, GEnie and to the Internet.

Members of its all-volunteer staff have been twice honored by the Dayton Amateur Radio Association (1981 "Specific Achievement Award" and 1989 "Radio Amateur of the Year Award") for their dedication and accuracy in the dissemination of news and information vital to the ever expanding United States Amateur Radio service. Newsline reports are aired weekly on thousands of repeaters in North America; by satellite over "This Week in Amateur Radio;" on VHF "intertied repeater networks" in several South Pacific nations (including Australia and New Zealand) and by hundreds of High Frequency bulletin stations worldwide. Newsline supplied material is also excerpted by Radio Netherlands "Media Network" communications magazine program and by several other international shortwave broadcast stations around the world.

Corporate underwriting for the "Young Ham of the Year Award" program has traditionally been supplied by Yaesu U.S.A. Corporation. Yaesu, a world leader in the design, manufacture and distribution of high quality Amateur Radio and commercial two-way radio equipment has long recognized the importance of the nations youth to the continued vitality of the Amateur Radio service. The continued support of this award by Yaesu has been well-received within the Amateur Radio fraternity, which is competing with other technical hobbies and specialties for the interest of young people.

Past recipients of the Young Ham award include Shawn Alan Wakefield, WK5P, of Bartlesville, Oklahoma (1986); David Rosenman, KA9PMK, of Muncie, Indiana (1987); Jonathan Binstock, NK3D, of Potomac, Maryland (1988); Erin McGinnis, KAOWTE, of Topeka, Kansas (1989); Mary Alestra, KB2IGG, of Staten Island, New York (1990); Richard S. "Sammy" Garrett, AAOCR, of St. Louis, Missouri (1991), Angela (Angie) Fischer, KBOHXY, also of St. Louis (1992); Kevin Boudreaux N5XMH of New Orleans Louisiana (1993) and Allison Zettwoch KD4CKP of Louisville Ky. (1994).

The following is a QST

The CTIA says no to local tower zoning. It wants the FCC to preempt local and state government regulation for all structures used for mobile communications. Also, the FCC says no to further deregulation of packet radio auto-forwarding, and a major ham radio newsletter mails its last issue. Find out which one on an expanded Newsline report number 908 coming your way right now!

CTIA TO CITIES: NO MORE TOWER REGULATIONS

A wireless telecommunications industry group has asked the Federal Communications Commission to preempt any and all state and local rules governing tower sites used for cellular telephones and other mobile communications services. In a filing with the agency on Tuesday, December 27th the Cellular Telecommunications Industry Association says that local and state governments will impede industry efforts to build the transmission towers needed for new wireless services unless the federal government steps in to ban further attempts at municipal level regulation.
CTIA says that there are more than 38,000 local governments being lobbied by so called "not in my backyard activists." People and groups who do not want any radio installations near where they live or work. In its filing to the FCC the CTIA asks if these activists will be allowed to thwart a national pathway for what CTIA terms parochial or ill-informed reasons?
The trade association's petition maintains that a 1993 law prohibits state and local governments from regulating entry into mobile services. It asks the FCC to codify the law into its own telecommunication rules and regulations and them act to enforce it.
If CTIA is successful in getting the FCC to issue a Notice of Inquiry or Notice of Proposed Rule Making on its request, it will be important for the Amateur Radio community to support it. This is because the Cellular Telecommunications Industry Association request goes far beyond what we hams currently have under PRB-1. In fact, if it is enacted, the CTIA federal preemption request may well mean the end to local municipalities regulating ham radio towers and antennas except possibly for safety.

(*****
PACKET RECONSIDERATION DENIED

Further liberalization of the rules concerning automatic packet radio message forwarding will not happen in the foreseeable future. So says the FCC in denying Phil Karn, KA9Q's request for reconsideration of a decision concerning message forwarding systems in the Amateur Service.
By way of background, on March 30, 1994, the FCC adopted an Order dealing with contemporary message forwarding systems. In it, the FCC said that the control operators of intermediate forwarding stations, other than the first forwarding station, would not be held accountable when their stations retransmitted

improper communications inadvertently. It said that the purpose of the Order was to relax the amateur service rules to enable these systems to operate at high speed while retaining the minimum safeguards necessary to prevent misuse.
But Karn tells Newsline that he felt the FCC order did not go far enough. That as written the rules still impede technological advancement in amateur radio data communications. He wants only the person originating a message to be held legally responsible for what it says.

"All I was asking for was that the burden for the content, responsibility for the content of an amateur communication should be on the originator. And that the requirement that the first forwarding station be also responsible or authenticate the originating station was unworkable given the technology. It was conceived for a BBS environment, but not every use of amateur packet radio uses a BBS." Karn, KA9Q.

But in its December 23rd action denying reconsideration, the Commission said the Order did not address, nor was it intended to address, what accommodations should be made for message forwarding systems that may be developed in the future. It added that if the present accommodation becomes unworkable in a system using a different architecture, the managers of those particular systems affected can request necessary rule changes at the appropriate future date.

(*****
GAZA UPDATE

We have yet another update on the controversial ZC6B operation from Palestine. The Ohio Pen DX Newsletter says that it has received a FAX from Arie Surkiss, 4X6UO. Surkiss is the High Frequency Manager of the Israel Amateur Radio Club. His FAX is a real eye opener on the situation and reads as follows. -- quote --

"According to the Israeli Ministry of Communication, Spectrum Manager Division, the Ministry has not issued such a prefix and there is no Israeli involvement in this operation. As far as I know the ITU has not issued a prefix to Gaza or Jericho." -- end quote --.

Meanwhile, IARU Secretary Larry Price, W4RA reports receiving a FAX of his own. This one from the PLO established Palestine Amateur Radio Association with information which may shed some light on the disputed ZC6B call sign. The FAX contained a newspaper article dated December 12, 1994 from the "Al Quds Newspaper" stating that the call was issued in 1948 to Dr. Sami Tarazi but never used because of the war that broke out.
As reported last week, all Palestine calls were canceled by the ITU back in 1968. The ZC6 prefix is now the property of the United Kingdom and not authorized for use by the PLO sponsored ham

radio group in Gaza.

(*****
WLR DEMISE

After twenty one years and 687 issues the Westlink Report ham radio newsletter has terminated its operations. This, effective with its January 1st, 1995 issue. Its owners cite health and lack of sleep as the primary reasons for the demise of the publication. The Westlink Report began its publication life as HR Report in January of 1974. It was written by Joe Schroeder, W9JUV and published by Communications Technology Incorporated. This was the same group that put out Ham Radio magazine. Schroeder says that in the 1970's, it was an idea whose time had come.

"Lets face it. One of the reasons or the reason that HR Report and subsequent efforts of yours and other people have been successful and have added to amateur radio is that the traditional publications, QST, CQ, 73 and at the time Ham Radio all had very long lead time. As the world progresses, the lead time to get things done gets shorter and shorter. So what we were doing to get the information out so the people could react and start adding their contributions to whatever it was that needed to be done long before it would have been possible under the conditions ten years earlier." Schroeder, W9JUV.

357 issues and 8 years later Poco Press took over HR Report, renamed the newsletter the Westlink Report, moved publication to California and continued bi-weekly for another thirteen years. This makes the Westlink Report the longest running newsletter serving amateur radio as well as the first to be published regularly from west of the continental divide. Schroeder says that the main impact of newsletters and other ham radio news services is to make Amateur Radio operators more aware of what it takes to keep the hobby service alive.

"Basically, the most important thing about amateur radio news is that it made amateurs as a whole much more aware of what it takes to keep amateur radio viable both on a national and an international scale. Because I think, back certainly when I was a much younger ham. We didn't talk amateur radio politics. We didn't pay much attention to the FCC. They did what they thought was right for amateur radio and a few people up in Newington took care of our needs. And that was it. I think there is far far more awareness and far far more involvement of rank and file amateur radio in planning for the future and in looking at what's going on day than there was 25 years ago." Schroeder, W9JUV.

Today, most amateur operators read about the world of ham radio on their favorite packet bulletin board, hear it on their local repeater from Newsline or listen by satellite to This Week in Amateur Radio.

And there is some good news in all of this. Westlink Report readers will automatically receive Worldradio Magazine to fill out the term of their subscriptions on an issue for issue basis. Also, Newsline has agreed to assume the duties of administering the Westlink Report Young Ham of the Year Award program. An announcement on the date for the 1995 presentation ceremony will be made within the next few weeks.

(*****
ALABAMA SM RESIGNS

Some names in the news. First the ARRL's Section Manager for Alabama has resigned. Ken McGlaughn, KM4JD, cites personal reasons not associated with amateur radio for his decision to step down.
McGlaughn's resignation took effect December 31st, that's half way into his second 2 year term as Alabama Section Manager. Taking over the duties is Tom Moore, KL7Q. Moore is active in ARRL activities and is recognized as a driving force in amateur radio in that southeastern state.

(*****
SCDCC

Out west, William Wetzel, N6RKY has been named Administrative Director of the Southern California Digital Communications Committee. Wetzel is best known for his fund raising efforts earlier this year on behalf of the Claremont Amateur Repeater Association. This, in Clara's successful court fight to ban several unwanted users from its systems. Wetzel replaces Jim Fortney, K6IYK who resigned from the SCDCC post for personal reasons.

(*****
CAREER MOVES

Some friends of the amateur satellite program have recently made upward career moves. This according to Harold Price, NK6K who reports that Professor Martin Sweeting, G3YJO, has been made Managing Director and Chief Executive Officer of Surrey Satellite Technology Ltd. This gives him overall responsibility for the administrative, financial & technical strategy of SSTL and specific responsibility for marketing.
Dr. Jeff Ward, K8KA and also known as G0SUL, has been promoted to Technical Director of Surrey Satellite Technology. He is now in charge of all technical and project matters for SSTL, reporting to the CEO. He also has a seat on the SSTL Board of Directors. SSTL is the commercial arm of the University of Surrey's UO-SAT Unit.

(*****
WIRELESS TEACHING

The Clinton administration says that it wants to use some of the billions of dollars that will be raised by auctioning the nation's airwaves to connect U.S. classrooms to the Information Highway. This, according to Vice President Al Gore.
The Federal Communications Commission was directed by Congress to sell the airwaves as a way to reduce the federal budget deficit. But the auctions could raise more money than Congress initially intended. Gore suggested that some of these extra funds could be used to plug the nation's schools into the telecommunications networks of the future. FCC chairman Reed Hundt, who shares the same vision, has endorsed the proposal. Gore, speaking at opening ceremonies at the latest spectrum auction said the White House plans to discuss the idea with Congress.

(*****
ARRL ON AOL

The American Radio Relay League has a new E-Mail address on the America Online service. Messages intended for the league should be posted to AOL address HQARRL1.
Electronic mail can also be sent to the League via Prodigy, MCI Mail and over the Internet. Please be certain you have the correct mailbox or address for the ARRL on each of these services.

(*****
GB2RS

From England comes word of a new GB2RS News Broadcast on the 70 centimeter band. It started on November 27th and takes place on 433.525 MHz on FM every Sunday beginning at 20:00 UTC. The bulletin station issuing the broadcast is G4OBE located in Enfield, just north of London.

(*****
PENPAL

Pat Bowers, KF5OL who teaches fifth grade at Swinburne Elementary School in Farmington, New Mexico has twenty four students that are looking for someone to write to. If your interested please send a note via packet introducing yourself to Pat and the class to KF5OL@KA5JNJ.

(*****
DX - ZS PIRATE

In DX, Ralf Aue, DL3JSW reports that he recently worked ZS6BUD on 160m and immediately sent out a QSL. In return he received a letter from ZS6BUD telling Ralf that he does not have equipment for that band.
The real ZS6BUD told DL6JSW that he has received quite a few QSL's for contacts that he did not made and that a pirate station is most probably an eastern block operator as he has been heard in Australia when Russian stations were also active.

Ralf adds that if you work ZS6BUD on 160 meters don't bother to QSL. It's simply a waste of time.

(*****

And for this week, that's all from the Amateur Radio Newsline. You can write to us at Newsline, Post Office Box 3506, Arcadia, CA 91006.

TH>Around 0300Z, as Tim tuned through 80M he found a relatively decent
signal (copiable by a beginner) on 3712.1 kHz. The station was
sending (repetitively) "CQ CQ CQ DE SXA 33 SXA 33 SXA 33 K" (it may
have been sending "VVV's" instead of "CQ", I forget, but I _do_ know
the call was SXA 33).

IG>From my time in SP I remember a a large number of nonamateur
>signals on the 80m band, most of them coming presumably from the U
>land. In Europe, 80 m was 3500-3800 and in U only 3500-3650. Almost
>any QSO was on top of something. Signals above sound familiar to me,
>so perhaps you heard a station from eUrope.

Could certainly be correct. a couple other replies received seem to
support your response.

Thanks for the reply.

Hang in there - six meters is usually a QUIET band but look-out, the Es season will be upon us very soon and the fun begins. One recomendation that I will make is get a better antenna than your 3 element jobbie.

Go for at least a 6 element long-boom yagi. Also, if possible, see if you or a local friend can put together a beacon transmitter so that when Es openings happen, that there is something for others to hear!

You will also benefit by listening for beacons between 50.060 thru 50.080 MHz. When you hear them start making 'CQ's' and always follow the most important six-meter rule - LISTEN, LISTEN, LISTEN (24 hours-a-day if possible).

This is not entirely correct. It doesn't matter if the machine is CPU bound
100%, the clock will update reliably. This is because the timer tick is
interrupt driven, from the Timer 0 channel, and is sourced by the 14.some_odd
megahertz clock that is used for bus timing, and in the old days, color burst
generation. The problem is someone is leaving interrupts turned off for too
long, and ticks are getting missed. This has NOTHING to do with the machine.
It's all in the code you're running (like any TSRs, heavy serial I/O without
using a 16550 SCC, etc). The only other scenerio that comes to mind is that
perhaps your oscilliator is off, but for that kind of drift, you'd most likely
have other (more severe) problems.

>This is a problem common to all DOS machines. The crux of the problem
>is that the PC's hardware clock is only read at boot time (by MS-DOS).
>After that the Time-of-Day clock is updated by a software interrupt
>which simply adds a clock tic to a counter which is, in fact the TOD

--------------Response ----------
John:
It is too late to worry about the best places to stay. They were
probably booked up last year. Latecomers often have to stay as far
away as 50 miles. But, I did find a room fairly late in the year
at the Days Inn in downtown Dayton. Not cheap though. It is also
possible that some new hotel/motel has opened that the regulars
don't know about and may have rooms. Good luck.

The Internet DX Mailing List
Frequently Asked Questions (FAQ) Sheet

Lyndon Nerenberg VE7TCP/VE6BBM
(Last Changed: 930906)

What is the Internet DX Mailing List?

It is an electronic mailing list dedicated to the dis-
cussion of Amateur Radio DXing. This is the place to
exchange tips and techniques, discuss hardware (rigs,
antennas, DSP add-ons), awards, announce upcoming DXpe-
ditions, etc. Anything and everything pertaining to DX
is fair game, with the following exceptions:

* Don't send requests for QSL info to the list. (If
someone wants to coordinate a list of current QSL
routes and post that on a periodic basis please
get in touch with me.)

* Don't send lists of QSL routes to the list. (See
above.)

* Discussion about contests and contesting should be
kept to a minimum. The CQ-Contest list already
provides an excellent forum for contest related
discussions. (To subscribe to CQ-Contest, send an
e-mail request to cq-contest-request@tgv.com)

How do I join the list?

To subscribe, send an e-mail request to

dx-REQUEST@unbc.edu

asking to be added. If you are not directly connected to the Internet you must provide an address relative to an Internet site. (We are not connected to BITNET or the UUCP network.) If you are not sure if you are an Internet site, ask your local system administrator.

Requests to be dropped from the list, change of address requests, or any other administrative mail should also be sent to the above address. UNDER NO CIRCUMSTANCES should administrative requests be send to the general

-2-

submission address!

Is the mailing list archived?

In a word, no.

How do I send a message to the list?

It's easy! Just send an e-mail message to:

dx@unbc.edu

Your message will be automatically resent to all the mailing list subscribers. Depending on the load on our mail system this could take anywhere from a few minutes to several hours. If you don't see your message within a day or so, send a message to the request address above (NOT the general submission address) and we will look into the problem.

Here are a few things to keep in mind when sending a message to the list. If everyone follows these guidelines it will help the list operate smoothly.

* Make sure your subject line is appropriate. If a conversation wanders off the original topic, change the subject line to reflect the new line of discussion.

* Proofread your message before sending it! Spelling mistakes and poor formatting do nothing to help you get your message across.

* Keep it short! Many subscribers pay for their e-mail access. Don't include 100 lines of the message you're replying to and then add a three line contribution. Only include as much text as is nec-

essary to establish the context for your reply.

* Watch your language! This list is gatewayed onto packet radio. Don't say anything that you wouldn't (or shouldn't) say over the air. Anyone violating this rule will be dropped from the list *immediately*!

* If someone asks a question, send your answer to them directly. The person asking the question should collect the responses, then send a summary to the list. This helps cut down on unnecessary

list traffic.

* Eschew flamage. If someone sends a flame to the list and you can't bite your tongue, send your flaming reply directly back to the flaming individual, not back to the list. No one wants to pay $1.00 to read these messages (the original flame + your reply). Treat flamers the way you would two-meter repeater jammers - ignore them.

* Make sure there is something of value in each message you send to the list.

When I reply to a message using my mailer's REPLY command I never see a copy of the message come back from the list. Why?

There are two possible causes. One is that your mailer sends the reply only to the originator of the message. In this case you will have to manually CC the mailing list. The second possibility is that your mail reader is so ancient and broken that it sends replies to the ``envelope'' from address instead of the From: or Reply-To: header values. If your mailer sends replies to dx-request@unbc.edu you are running broken software. If you are in the att.com or microsoft.com domains you want to double check for this second problem. Note that replies sent to dx-request get filed in the bit bucket.

Where can I obtain back issues of the various DX bulletins?

An incomplete archive of various Amateur Radio related bulletins is available via anonymous FTP from unbc.edu:/ampr/bulletins/. I add back issues as I come across them - feel free to contact me if you can help fill in the holes. Some time this fall I will be setting up a WAIS server that will include all the online bulletin files. WWW and Gopher interfaces to this data

are also in the works.

If you have any suggestions or additions for this document,
please e-mail them to: lyndon@unbc.edu

In article <kjnD2848o.Gy6@netcom.com> kjn@netcom.com (Ken Navarre) writes:

>If you want to reduce part of the problem use a commercial grade
>(type approved) radio for the ham band rather than a modified ham radio
>on the pub safety band. then you at least reduce the charge of using
>non-type approved equipment to, maybe, harmful interference and
>transmitting without a license.

That certainly gets you around some (but not all) legal difficulties, and it would work. The biggest problem is that as far as I know there is no type accepted radio available anywhere which is very convenient for the kinds of things hams like to do. The type accepted radios I'm familiar with (primarily the Icom H16) will work but they are clumsy to program. If you go to a different area and need to change repeater frequencies you face a non-trivial task. They are useful for somebody who is both a ham and in search and rescue. If amateur radio is your thing they just won't do. (And they are more expensive than non-type accepted radios.)

In my opinion, if the only reason you want this is in case of emergency when you might want to transmit on a public safety frequency, then you would be better off using a modified ham radio. Such transmissions are allowed in emergencies although apparently there are government officials who don't like it so you may have to defend yourself. Just make sure it is a real emergency and that no other means of communication is available to deal with it. If you save a life you are probably OK. If the victim dies in spite of your efforts some jerk is likely to see if he can nail you. An available amateur repeater which you could have used is probably all he would need to get a conviction. Theoretically he could nail you even for saving a life if other communication was available. However a life saved goes a long way with any jury so you would have a good chance of getting off.

537. Re: Tips on using my new keyer [long]

|>
|> 73,
|> Mike, KK6GM
|>
Mike et.al.

My preference on holding the paddles is to make an "A-OK" like sign
with the thumb and first finger of the right hand. The hand rests on
the table with back of hand in the verticle plane or near verticle.
Whatever is comfortable for you.

The thumb touches the left-hand-side, LHS, and the first finger touches
the right-hand-side, RHS, at all times and very lightly. I use a very
light spring motion or tension in whatever paddles I'm using. My two
favorites being the Brown Brothers (my first Iambic paddles) and the
Bencher. Both the thumb and the finger should still be "curved", not
bent in like you describe as a "pinching" form. This is stressful and
tiring on the muscles and not quite "natural" to me. It will wear you
out in a hurry for long sessions at the paddles.

Historically, for right handed individuals (but this is just historical),
the left paddle is the dit and the right paddle is the dah. It was the
way mechanical bugs were set up in the beggining.

Since you are coming from the Key/Bug world, like the rest of us,
I'd recommend that you bite the bullet and start with the "Mode B"
Iambic keying, i.e. use the minimum number of finger and thumb movements
necessary. It is usually one or two motions for all letters except
P and X. It will take time, patience, and lots of sending. If possible,
sit down with newspaper and send for two or three minute periods followed

by a rest period. Record and playback what you sent, if possible.

In my observations of others, bug users tend to "slap" the paddle around like it's a bug. Remember, there is very very little mechanics going on here. The electronics in the keyer does all the work. So early in the game, learn to just lightly touch the paddles. With a light touch I've never had any problem with any iambic key and I own a few and play with them. Each has it's own personallity and I'd use a different key in different environments such as mobile CW, field day operation, contest, portable, and other operations. I see posts where someone wants to glue down the paddle, put it on sticky feets, etc. My first guess is that individual is using too much force. The necessary force to operate the paddles is on the order of fractions of an ounce, NOT pounds. :-) Give up the macho crap here. :-) CW operators are sensitive people.

If possible, sit down and seriously go through the alphabet and numbers and prosigns and figure out the minimum number of "strokes"/"touches"/"finger movements/pressure" that you think will be required for each in the B mode. Play with the keyer in slow speed, say 5 wpm, and see how the memory works. What happens when you release the dit in the beginning, middle, late part, and after the dah? It may be that different keyers, depending upon the software if it's a microprocessor based keyer rather than using the Curtis 8044ABM chip, do different things. If you buy a used keyer, find out beforehand what it has in it. It does make a difference. Some have Curtis Keyer chip, others use micros, and others use digital logic. Don't make a mistake here. It's not fun. I know, I've been there.

In fact, at the current operating position, the MM-3 from AEA costs me more than the rig (QRP). Note that in contest photographs you will see more than 80% of the CW ops have an MM-3 in front of them. There must be a reason for this. Look at the CQ 1995/96 calendar where the operators are at their operating position. Just an observation on my part.

Someone on the list can tell us if there is a reference on exact timing for each of the modes. In all of my stuff, I don't remember seeing anything. This may be a subject for an article in the "New Hams" section of QST, since it comes up so much. I am about to travel, maybe I should do it, but usually don't have the time or energy to do any work at night when I get back to the room, and you know what I mean if you travel and stand on your feet all day.

So, in order I recommend (and you have the right to remain silent, you can throw this away with the "d" key of your mailer) for starters:

1. Set keyer in B mode (if an option) and 5 wpm.
Send each letter of the alphabet 10 to 20 times. Concentrate on correctness and the time fingers are pushing the paddles and minimize the number of movements. Remember, any movement is energy and time used. Do "energy conservation", but not at the expense of comfort.

2. Repeat step 1 at a slightly higher speed. Do not advance speed if you start "modifying" your behaviour and movements to a more exaggarated form. Relax. Relax. You will do this. You will do this. Don't rush.

Don't rush. Send and they will come. Send and they will come. The keyer won't let you go any faster than the speed at which it's set. Stay at speed until you are near perfect in sending. Work on letter and word spacing at the same time. There is a builtin auto-character insertion space builtin. Find out where this is. Especially in message memory keyers.

3. Practice with plain text.

4. Practice with random text. Take book, magazine, newsprint, and send only every second letter, third letter, or first letter of each word.

My philosophy. Tis better to mess up here than on the air.

5. Don't count. Don't count. Don't count dits and dahs. Don't count. Don't count. (Guess which rule I think is the most important?) ***BINGO***

Of course, all of this done with sidetone of keyer. Don't do this on the air. :-) Remember you are working with copyrighted materials and you don't want to take up spectrum space anyway.

You will know that you are doing it right and are getting good if you can go at a fixed speed for three minutes and make less than a half dozen mistakes.

Oh, another historical kind of thing. It is difficult to send the "error" prosign. It's just too long and not sent all that often. You will people on the air, after an making an error, either send "?" and repeat the word. Or hesitate in real time and resend the last word. The later is obvious to both parties involved. I, a long time ago for some forgotten reason, started sending III (three I's), then resending the word. Gets the same effect as the "error". Technically it's not correct, but it works, doesn't take much time and is used by other OT's, OF's. :-) It's a timing kind of thing. Which is faster to send? III or "?" (a question mark)? It should be obvious.

OK, sorry for the long post. You asked and you shall receive. Hope all this makes sense. It's something that we sometimes don't consciously think about and it's good to sit down and put it in writing. Maybe someone can point out errors in our ways and it will really help someone get over that "hurdle" in the race to the finish. Enjoy CW.

Sorry for the dissertation. NOT. :-)

**********************************************************************
* University and School Amateur Radio Club List Version .04b *
**********************************************************************

January 10, 1995

Welcome to the University and School Amateur Radio Club list. The
purpose of this list is to provide information about amateur radio
clubs at schools and universities. The current editor of this list
is...
Jeffrey Luszcz N2TIQ
jeff@gauss.arc.nasa.gov

This list will be availible for ftp from the following servers:

oak.oakland.edu

The current version is:

/pub/hamradio/docs/misc/ham.faq.univ_Version_.04b.txt

soon to be updated to this one.

Also I will be posting this list once every two months onto the
following newsgroups:

rec.radio.amateur.misc

!!!IMPORTANT!!!
If you do NOT want your club's information presented here
then please inform me of this wish through email.
!!!IMPORTANT!!!

The current data format for submitting club information is....
--------
SCHOOL:
NAME:
ADDRESS:
CLUB OFFICERS
REPEATERS:
CLUB STATION:
STATION TELE#:
ORGANIZATIONS:
YEAR STARTED:
NUMBER OF MEMBERS:
BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY
```

If everyone follows this form it makes it easier to edit and
maintain the list. I see this format changing as the list grows
and new concerns become raised. Please address your email to me
as follows FAQ -(name of school). For example...

Subject: FAQ - Cornell University

This makes it easy for me to move the mail around and put it in
the right folders. I am working on getting this information into
a database which will let me change the FAQ around easier and put
it in alphabetical order. Watch this space.

The FAQ is now in alphabetical order, great day indeed.

DISCLAIMER:
Feel free to copy and disperse this list freely as long as it
remains in its original format. If you do not want your clubs
information in this list then email the list owner and tell him so.

Also...
I am unable to provide any other information regarding college clubs
other than what appears on the list. Either the organization has
requested that it be kept confidential, or I just don't know. If
you do find out, please direct such information to my submission
address above so that others may benefit from it.

BANDS ACTIVE:
E-MAIL ADDRESSES:
HISTORY
Oldest license found - 5YM - dated 6/4/20, but there is anecdotal evidence that we may have been licensed in 1914. The station was active in the early '20s prior to the opening of KFMQ, the U of A's first broadcast station. Logs have been found for the '32-'34 period when the station (*W*5YM) was active on 'phone using a Class B modulation amplifier built as a class project. Loy Barton, inventor of Class B, was a graduate and faculty member of the U of A. Haven't found any relics from '34 - '49. 1949 we were granted W5JNI and our station was in the then-Business Admin building. We suspect the trustee knew nothing of the previous station as he was not in engineering. We returned to W5YM in 1952 and the club has been going strong pretty much ever since.

HF bands, 2 meter and 440 (some sat work)
E-MAIL ADDRESSES:
general membership: W6BB@violet.berkeley.edu
officers/board: hams@violet.berkeley.edu

HISTORY
I worked on this last year. Essentially, we were formed
in 1914 as one of the first stations on the west coast.
We started DX receiving experiments at this time, and
soon established skeds with the University of Washington
and a few other schools. Our first call was 6BB and dates
back to at least 1920. I think oneof our members was the
first woman to get a commercial radiotelephone operators
license in 1924. Early on we were also connected withthe
commercial station here at Cal, and did early broadcasts
from football games, alumni dinners, etc. Club fell into
decline in the1930's, but was revived after the war,
and has followed typical boomand bust cycles since.

HISTORY
GTARC was started by 1927 for sure, and we believe that it may have
existed as early as 1911- we're still trying to corroborate that info.
We have approxi- mately 50 members or so, who operate on all bands
and all modes, especially while contesting! The club has an email
server at listserv@gitvm1.gatech.edu, or you can send mail to the
club account at eew4aql@prism.gatech.edu. We would be very happy
to hear from any interested folks out there, especially those who
are or have been associated with Tech or the club.

HISTORY:

The Harvard Wireless Club, founded in 1909, is America's oldest
amateur radio club. HWC operators have made thousands of contacts
in a variety of transmission modes over the past eight decades.
Most recently, HWC won the second place in 1994 School Club Roundup
for Colleges and Universities (See QST, September 1994 issue,
page 124 for details.).

HISTORY
The club has been around for many years. The original
club was W0YI. It was founded over 75 years ago. The
W0YI club call is still maintained here at ISU by one
of our faculty members.

Our club has approximately 20 members who are somewhat
active. There are many more hams here at ISU, but many
of them are too busy with their studies and other clubs
to become involved with the CARC. We are always in
search of new membership.

Our members can usually be found on 2meters or 70cm.
At this point in time, there is very little HF activity
in the club.
Our club has been involved at ISU for many years. We have
meetings several times per month. Every spring, we set up
an open house display and help with communications for the
annual VEISHEA celebration, which is the largest student-run
event of its kind in the United States. We provide
communications for the VEISHEA parade, calling tow trucks,
ambulances, and the police if the need arises.
It is best for new prospective members or people
interested in the club to call me or Clyde Walter at
the numbers above. I am only at ISU during the Fall and
Spring semesters, while Clyde is a professor who is here
year around if the need arises to contact the club in the
summer months.

HISTORY
The MTSU club has been around since at least the 1960s, first as a
trusteeship of the Dept. of Industrial Studies, and now under the
Dept. of Computer Science. Membership has been small because the
historic mission of the University was that of a teacher's college
(thankfully that's changing). The Raider Amateur Radio Club is a
key player in the packet radio field, and its members provide part
of the core support in a project to bring high-speed (56k bps and
up) packet connectivity to the entire state of Tennessee, from
Mountain City to Memphis.

nuars-request@w9bgx.nuars.nwu.edu (LISTSERVER)

HISTORY
The Northwestern Amateur Radio Society dates back until late
40s or early 50s. It has been affiliated with the McCormick
school of Technology and the department of Electrical
Engineering since its inception. The club has achieved many
awards over the years, including one of the very early 5-band
DXCC's.

In 1991 a storm took down our main tower and antenna, and the
shack had fallen into disrepair. However, in 1992 Drs. Allen
Taflove and Alan Sahakian took over the faculty advisor
position, and launched an effort to bring the station back on
the air. In the summer of 1992 a new tower was erected at a
better rooftop spot than before at a cost of over $10,000, and
faculty and student members together cleaned and renovated the
shack, and the old transceiver equipment was replaced. We
also pulled in Ethernet cabling for Internet, and got a
computer (w9bgx.nuars.nwu.edu).

We are currently looking into holding a course in the
Department of Electrical Engineering which will use the
resources of the Amateur Radio club, and hope it will increase
student participation.

REPEATERS:
see below
CLUB STATION:
Station 1 - Philadelphia (main campus)

Kenwood TS-940S, Alpha 76A, Icom 275H, Icom 375A, Icom 471A, PK-232,
80286,Azden PCS4000, power supplies, headsets, mics, Vibroplex
iambic, keyer,KLM KT-34A @100', Cushcraft R5 @ 60', 40m dipole @ 60',
KLM 2m/440 OSCAR,yagis, Diamond X200 @ 100', various other VHF and
UHF antennas, one tower on roof - top of tower is at 100', and all
of the usual accessories.

Station is in the engineering building on the 2nd floor. It's been
in the same room since 1924.

Station 2 - Valley Forge

Kenwood TS-530SP (soon to upgrade to TS-850), Dentron Clipperton-L linear,Kenwood TM-742A 2/440/6m, Icom 271H, 80286, Telrex 5-el tribander @ 40',3-element 40m monobander @ 70', Mosley TS-33 @ 40', 40m dipole @ 40',75m dipole @ 45', Diamond U2000, long-boom VHF/UHF yagis, Hustler 2m G6,other VHF and UHF antennas, 5 towers total.

This station is on top of Mt. Misery at the U of P Microwave Research Center. We go out to this station on weekends, for field day, etc. It used to be a Nike Missle tracking station back in the cold war days and now Penn uses it as a research center. Great location - the highest point in the Philadelphia area.

Linked UHF Repeater System

Main site: Mt. Misery, Valley Forge, PA. 443.8+, 750'ASL, 2.6kW ERP
Phil site: Penncampus on top of high rise, 440' ASL, receive-only
Eagles Peak: Lebanon county, PA 442.400+, 1420' ASL, 800 watts ERP
6m remote: Mt. Misery, Valley Forge, PA 52.525 700' ASL, 200 W ERP
Addtional sites will be going up this spring/summer.

Co-sponsored repeaters

These two repeaters are on Penn's campus on High Rise North. We co-sponsor the repeaters with the clubs listed:

146.685- Holmesburg ARC 440' ASL, 800 watts ERP, two remote receivers
442.700+ NEAR-FAR ARC 440' ASL, 700 watts ERP

W2SZ sports its own Usenet Newsgroup. It's rpi.union.ham-radio.
Some off campus systems may not be able get it.
HISTORY

W2SZ was originally created as 2SZ by the Troy YMCA around 1910. It was turned over to Rensselaer Polytechnic Institute in 1917 where it has been providing services to its members and the community ever since.

The station provides Amateurs with an opportunity to keep in contact with friends at home as well as providing for the learning of radio and basic electronics. The station also provides a friendly and relaxed atmosphere where members can come to get away from the stress of classes and work.

W2SZ, known to members are Zed, is a friendly group of people that are willing to share their knowledge and help those who have an interest in ham radio to get, or advance, their license. In addition they are willing to share their knowledge in the proper maintenance and operation of both club and personal equipment.

The club currently consists of about 30 members and is located at Six Sunset Terrace, Troy, NY. It also has contact with many of the past members who have long since graduated from RPI, or community members who live in the Troy area. It provides the members with many contacts, and also provides the community with a viable method of communication through the repeaters that the club has. In addition to day to day communications, W2SZ also offers lines of communication during periods of crisis. Examples of the Club's community involvement were during the San Francisco earthquake, and during Operation Desert Storm.

HISTORY

We have a club call W0QEV that has been ours at least since 1947 which is the oldest log that we can find. The league claims that we have been affiliated with them since 1949 which makes us one of the older if not oldest club station in the zero call region. This far back though and nobody really knows. Someday we will have to search though old call books from just after the war to see just when that call appears.

The club started as part of the department of electrical engineering here. It became a student union organization around a decade ago and as a result has a steady source of funds. As far as membership, if only that was as steady as funding. The club has students, graduate students, professors, university staff and even alumni. Probably around 20 members but only half that many are easy to

get a hold of. There are always to few undergrads!

An addendum to the above. After the war st. louis became part of
the zero district as opposed to the old nine district. We have
reason to believe that the club was around even before the war,
but don't know under which call or how we can research this.
The ARRL doesn't know and the fcc doesn't even bother with this
type of stuff.

MJ>I'm a left-hander, but I've already decided to learn with my
>right hand (comments?). I have a couple of specific questions:

Being a 'lefty' myself, I'll take a stab at your questions...

First, I send with my left hand, but leave the paddle wired 'righty',
this way, I can pretty much walk into anyones shack and use their keyer
without having to worry about cross-wiring it. However, if you can
learn to send well with your RIGHT hand, while writing with your left,
you're WAY ahead of the majority of the crowd... I've taught myself,
over the past 36 years, to send passably well with my right hand, but I
still (much) prefer to send lefty.

MJ>a) How do I hold the paddles? The alternatives seem to be with my
>forefinger either flat against the dot paddle or at an angle, kind of
>like pinching the paddles. The latter seems to afford more control.

You'll get differing responses from each reply... almost guaranteed...
read them all... and pick the one(s) you feel best fit your needs.

I generally suggest to my students that they use their thumb on one side
and probably the forefinger and the middle finger on the other side.
AND to NOT use the sides of their fingers but use the TIPS. The tips of
the fingers seems to be more sensitize and thus give you (me) a better
sense of timing... I've seen a lot of ops who send with the sides of
their fingers and they (generally) just don't seem to have the dexterity
required to do a good job of sinding consistently clean CW.

Also, try to keep your finger tips quite close to the paddle surfaces..
don't allow a lot of 'air space' between fingers and paddles. Keying is
a precise operation and it takes a finite amount of time for you to make
each contact closure. If you allow a lot of air space, it takes you
longer to make the transition from DITs to DAHs and this can
significantly effect the timing of your contact closures, and thus can
cause you to incorrectly form characters, especially on keyers which
include Automatic Character Spacing (ACS, not a problem with keyers
which use the Curtis keyer chip, e.g. MFJ, etc.). But, just because the
MFJ keyer doesn't offer ACS, this doesn't mean that it's still not
important to work toward maintaining a good sending fist... and finger
positioning.

When I send, I keep the fatty pad of my (left) hand on the table, I curl
my forefinger and middle finger a bit, so their tips touch the left
paddle and the inner edge of the tip of my thumb touches the right
paddle. I use a very slight rocking motion and also something of a
'caressing' motion of my fingers against the paddles.. I don't just

PUSH them, I let my fingers slide just a bit (front to back) as I send..
and I try to leave no more than 1/8" or so air space between
finger/paddle. This seems to permit me to have a fairly light touch
while maintaining decent control of the paddle.

MJ>b) Should I deliberately try to use the iambic feature, i.e. send a 'C'
>by doing one properly-timed squeeze, or should I send the alternating
>dits and dahs with individual touches, just letting the keyer sort out
>the timing. My inclination is to NOT try sending any characters just by
>squeezing.

Personally, I recommend AGAINST learning the iambic method as your SOLE
method of sending. This is because there are still some (older) keyers
out there which don't offer iambic keying and which will 'kill' you if
you try to send iambic with them... I prefer to use the iambic features
(actually the DIT-DAH memory) of keyers for 'inserting' DITs or DAHs
into the characters which require more complicated finger operations...
it's quite easy to allow the logic handle this for you... AS LONG as you
stay just a bit AHEAD of the sending (e.g. you make the DIT-to-DAH
transition WHILE the DIT is sending, rather than waiting for it to end
before you make the DAH closure). As long as you stay just a bit ahead
of the keyer's sending, AND as long as YOU force the character spacing,
the keyer should take care of putting the elements together in the
properly timed order.

MJ>Finally, what else do I need to know to learn this thing properly?

Practice, practice, practice... and OFFLINE, too! Practice for a while
(days at least) before you get on the air with the keyer... practice
sending ANYTHING you can see... pages out of QST, the knob labels on
your rig, etc. Work at several different speeds. Have a credible
friend listen to your fist and give you constructive criticism. WORK
hard at NOT running characters together... some folks have certain
character pairs that they just cannot send without running them
together... find out if you have any such sets and work on fixing them
before you develope a BAD habit you can't shake. Make sure you leave
ample space between WORDS. In fact, take pains to leave a bit more than
the normal spacing at forst... you can always close it up later. Always
better to leave too much spacing between letters/words than to have them
all on top of each other.

Good luck.

Hello Ronnie

Let me have your mail address and I'll mail you the Amiga Amateur Radio
User Group introductory group floppy disk which contains details of how to
join, PD list, member list, old newsletters etc etc. As I said in my
article membership is free, newsletters and PD are mailed out on a
self-addressed samped envelope basis and any donations are completely
optional.

If any other hams want a copy of the AARUG introductory disk then let me
have a blank floppy and return postage and I'll mail the disk back.

My address is:

Immoral? I think it's illegal. *I* sure don't remember reading about
any authorization to charge more than $5.92 in 1995, regardless of
filing method, for administering an amateur exam. Maybe the aggrieved
party would consider reporting the incident, complete with callsigns ...
if *they're* valid! (Maybe that license will never come, because the
fraudsters won't be sending it in?)

Message-ID: <Pine.BSD.3.90.950112002001.6697C-100000@inet.cml.com>
Source record: 253552

I have an MFJ 1278B Multimode with MFJ 1289 software which will allow me to receive and send sstv. The problem is that the software requires an input of graphics in pcx format having a resolution of 320 x 200 x 256 colors which it then converts to the sstv format selected by the operator. My problem is I can't find graphics having that exact resolution,the real problem being the 256 colors. I can find clip art programs giving me graphics of pcx in resolution 320 x 200 x 16 colours, but can't convert up to 256 colors. Programs like GWS Workshop and Alchemy won't convert up the colors. So I'd like to know if anybody can tell me where I can get graphics in the exact 320 x 200 x 256 color format.

Hmmmmm, sounds like someone fishing for traffic. I used to flick off the CQ tape and use a keyer to send VVV VVV VVV DE NMO NMO NMO QRU? K on our 4, 6, 8, 12, 16, and 22 MHz transmitters; you've got to keep the transmitters sending something *repetitively* so ships know you're open for business. If your assigned transmit frequencies are inactive (CQ tape turned off) then ships think you're busy working someone and they'll try some other shore station. For commercial shore stations that's lost revenue.

If I was lazy I'd let the CQ tape do the work: CQ CQ CQ DE NMO NMO NMO QRU QRU? AMVER OBS 4 6 8 12 16 22 MHZ AR K running at about 22 WPM. I'd be listening to 4 scanning receivers at once (and usually reading a book), unless there was a second operator; then we'd each take two of the Collins scanners.

It gives the "purists" in our club fits, but for Field Day results, there's nothing like a YL using the non-standard phonetics for the club callsign, "Whiskey 3 Sweet Kisses."

> 73 de kf5dx bob

Dear Bob,

thank's a lot for your compliments. See the results. I am starting to babble ..
:-) :-) :-)

Some word's to the "wise old DXers" here on the frequency (sorry News Group :-).

I know many of them are very angry/frustrated about the chaos during some
(the most?) pile-ups. Why they don't tell us how to do it; why they don't
share their experience with us? :-)

Here some rules and hints from a HAM who is on the Short Waves since Sep'94.
I am a HAM who is dreaming about a super TRX, a 1KW linear, a 100 feet tower
and a qubical quad for the 40 up to the 10m band .. (dreams, sweet dreams :-).

An equipment like this may be very helpfull for DXing, but don't worry, you
can make a lot of DX without this super equipment when you use your brain.
(sounds arrogant? :-)

Ok, (sorry for my bad English) let me tell you my rules for successfully
DXing. I know, you are an old wise DXer and there is nothing new for you.
So, please let me know your rules or have fun and I am happy to hear you in
the next pile-up. :-)

I am only working in SSB, so I don't know if my hints are helpfull for CW!

I have a "Golden Rule": I WANT TO WORK THIS RARE DX AND IT'S **My JOB**
TO MAKE THE DX-STATION HAPPY!"

When you stumble over a pile-up ...

- You should never start calling immediately.

- Please try to understand what is going on here (+-10kHz).

- Before you start calling you should have written down the callsign, the
qsl-route and you should know what the dx-station likes and what not, hi.

- Never ask for anything (there is no reason for any question, think about it!)

- Call only when the dx-station is asking for it.

- Call with your full callsign. There are many HAM's who don't respond to
a two letter suffix or something like that. If you don't realize it then
you are a part of the QRM only (nothing more, nothing less :-)

- When the dx-station makes a selective call and wants to here calls from
stations only ..
- with a special number in their callsign
- or with a special prefix
- or from special areas (countries, continents, etc.)
- or from .. (any other selection) ..
then you should be quiet, when you don't have the requested number or
prefix in your callsign or if you are not from the requested area.

- Make a short call, don't repeat your callsign or suffix again and again.
Very often I have made my QSO with the dx-station and I am in the log (!),
when other HAM's are calling and calling and calling and calling ... :-)
BTW: Very often I made the experience, that the dx-station responded to the
first call of someone, but the requested station don't hear it because
the OM is calling and calling .. The OP of the dx-station is frustrated
and calls an other one.

Please imagine: This "calling for ever" guy never realized that he was
a winner and he lost his "prize" just after seconds!

OR an other situation:

You may give a shit for the requested selection. The result may be
a response like this:
"<your callsign> Sorry old man you don't fit my
request. 73, only calls with number five please!
QRZ"

Please imagine: You are not in his log (means: No QSO; means: NO QSL).
BUT you are on something like a "black list" in his
mind. Do you remember my golden rule?? :-) :-)

- Don't repeat the callsign of the dx-station. Believe it or not: he, the OP
of the dx-station, knows his own callsign. :-) You are just wasting time.

- Don't tell the story of your life. Just give your callsign and the report
and (only if requested!) your name and QTH. Nobody wants to know the WX at
your QTH or the name of your dog! :-))

- ....

- I may tell you my experience with "lists", but I need a pause now!

- I don't know very much about dx-nets.

A final remark:

Do you have a speech compressor? Fine! Please use it at the maximum value.
That will improve my very own chance in the next pile-up!! :-)

With other words: If you are running 1KW and a beam you don't need it and
if you are running your TRX barefoot with a simple antenna you should polish
your signal with a very clear modulation; QSelle?

Tell me: who needs a compressor? If you think you should use one then I
have a tip for you: Buy a TRX without a compressor and put a clothes-peg
on your nose. It has the same effect and it's much cheaper; QSelle?

A speech processor (processor not compressor) may be very helpful, but you
should know how to use it to polish your modulation in the right way!!!!

That's are my 2 Cents for the story

"Get on the DXCC - Honor Roll in three days", hi!

Have fun .. 73 de DK3VN
Waldemar
PS: If you think I am telling nonsense, please let me know, really!

Best thing for your dad would be the use of ham radio satellites. He needs a Tech license (not difficult) the ARRL video course is excellent) and a 2m/440MHz multimode rig or a 2M transmit/ 10 meter receive (the new RS-15) would be great. Naturally this in only for non-business purposes.
Best,
Peter

Hi Gang, can anyone tell me what the chips are in the Kenwood TS440 for the computer interface? Mine seem to hv gone south. I originally bought mine from kenwwod, but latter found out the chips are avaible from other sources, such as digikey. The problem is I need the chip numbers. I've checked various mods files without success. I've checked my interface on multiple known wrking com ports and hv tried a known wrking IF232C interface, so it seems to be pointing at the chipset in the radio. Any help is appreciated.

de Ken KA3PLS

{definition deleted}

Then I guess it's appropriate to call my Amateur Television Transceiver a
"radio"?!

Hmmm.... I wonder how Webster defines "transceiver"? 8-)

563. Old Heathkit (and Drake, etc.) equipment for sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-12 15:41:33 UTC
From: pascalamb@aol.com
Message-ID: <3f3ijd$n0e@newsbf02.news.aol.com>
Source record: 253562

Folks,
Finally was able to identify the ham radio equipment left to me by my father. So far I cannot find the Heathkit equipment. I assume it is in storage; I will post a note when I locate it. Here is the equipment I have located so far:

Drake R-4A Reciever
Drake T-4X Transmitter
Drake MS-4 Speaker
Gonset G-Sixty Three Receiver
Variac Auto Trnasormer
Lafayette He-48
Varitran Transformer, Model V-1M
Asiatic Microphone

Sorry for the confusion re the Heathkit stuff. All of the above is in the Riverdale section of the Bronx, New York City, and would have to be removed by whoever buys it. Kindly contact me by e-mail, indicated how much you think the iterms are worth, if you're interested. Thanks.

564. Marine band radio modification

Date: 1995-01-12 15:47:30 UTC
From: vbreault@rinhp750.gmr.com
Message-ID: <VBREAULT.95Jan12104730@rinhp750.gmr.com>
Source record: 253563

I have been offered a marine band radio for a low price but before I cut the check I want to be sure that I can modify it for amateur 2m band use.

The radio is a Uniden model MC-580. It's a 1W/25W unit that looks a lot like the MTX-101 that Radio Shack sold until 1994. (White case, gray sloped front)

Has anyone done this conversion? Can anyone point me to someone who has?

John,
Actually I am more impressed with CBer's than most hams. In our
community CBer's have provided 'Coffee Breaks' on the highways and are very
activate in neighborhood 'Crime Watches'. While the hams are using the local
repeater to compare medical charts and the costs of cesspool pumping.

569. Ham Radios on Aircraft - Regs (again)

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-12 16:53:02 UTC
From: William_A._Kirsanoff@ccmail.anatcp.rockwell.COM
Message-ID: <9500127899.AA789929880@smtpgty.anatcp.rockwell.com>
Source record: 253569

OK. Here we go again. There are both FCC and FAA regulations that effectively prevent the use of a ham radio (or any other non-flight certified radio) on a commercial aircraft. (A private aircraft under VFR is another matter.) Here they are, as I saved them from the time this came up a year ago. You don't have to agree with the rules, but they are the rules.

Note that prohibitions from USING the radio do not preclude having the radio in your possession on board. I frequently take my radio on board airliners, walk it through security (I have them hand check it, no x-ray), and transmit and receive in the terminal. Just turn it off on board.

Regs and commentary from a previous poster follow, can we move off this unending thread now?

Subject: Operation of Ham radios on planes

The use of a transmitter on-board an aircraft is a recurring topic in this group. With this in mind, I have saved the meat of two posts from April of 1994 that should provide the difinitive answer. I've lost the attribution on the posts, but here are the applicable sections of both part 97 (FCC Regs.) and FAR Part 91 (FAA Regs.)

Begin Quote (FCC Regulations)

97.11 Stations aboard ships or aircraft.

(a) The installation and operation of an amateur station on a ship or aircraft must be approved by the master of the ship or pilot in command of the aircraft.

(b) The station must be seperate from and independent of all other radio apparatus installed on the ship or aircraft, except a common antenna may be shared with a voluntary ship radio installation. The station's transmissions must not cause interference to any other apparatus installed on the ship or aircraft.

(c) The station must not constitute a hazard to the safety of life or property. For a station aboard an aircraft, the apparatus shall not be operated while the aircraft is operating under Instrument Flight Rules, as defined by the FAA, unless the station has been found to comply with all applicable FAA rules.

End quoted text.

Begin Quote (FAA Regulations)

FAR Part 91.21 Portable Electronic Devices

(a) Except as provided in paragraph (b) of this
section, no person may operate, nor may any
operator or pilot in command of an aircraft
allow the operation of, any portable electronic
device on any of the following US-registered
civil aircraft:
(1) Aircraft operated by a holder of an air
carrier operating certificate or an operating
certificate; or
(2) Any other aircraft while it is operated
under IFR.

(b) Paragraph (a) of this section does not apply to --
(1) Portable voice recorders;
(2) Hearing aids;
(3) Heart pacemakers;
(4) Electric shavers; or
(5) Any other portable electronic device
that the operator of the aircraft has
determined will not cause intereference
with the navigation or communication system
of the aircraft on which it is to be used.
(c) In the case of an aircraft operated by
a holder of an air carrier operating
certificate, the determination required by
paragraph (b)(5) of this section shall be
made by that operator of the aircraft on
which the particular device is to be used.
In the case of other aircraft, the
determination may be made by the pilot in
command or other operator of the aircraft.

End quote -- begin interpretation & explanation

Applications
1) If your buddy takes you flying in his PA-28R, you can
get his permission, as Pilot In Command to operate your kilowatt
2m station, if he determines that doing so will not interfere with
his communication & navigation equipment.

2) If you're flying to Florida on AirWorst Airlines, you may NOT
operate any transmitter or receiver ever. The pilot does >NOT<
have the authority to allow such operation. (See FAR 91.21 (c) --
The important definition is "operator" which is NOT PIC [pilot
in charge])

End of saved posts.

-
The ARRL CAC memo follows:

From: Mark Beckwith, WA6OTU - wa6otu@caltech.edu
To: Roger Keating, KD6EFQ - keating@nosc.mil
Date: January 11, 1995
[...portion of letter text to KD6EFQ deleted...]
****
From ARRL Contest Advisory Committee
To: ARRL Awards Committee
Date: January 5, 1995

The Contest Advisory Committee herewith recommends to
the Awards Committee to direct the Headquarters staff
to facilitate a solution to the continuing Rover
Issue by performing the following tasks:

1. Collect a database of active Rovers and VHF clubs
by scanning the participants of all the ARRL-
sponsored VHF/UHF contests since the inception of the
Rover Category. Initiate a questionnaire to some or
all of these participants asking any questions
helpful to the solution of the Rover Issue,
including:

a. Do you think under the old rules Rovers
should have been excluded from Club Competition?

b. Do you think Rovers would be inspired to
put more or less grids on the air using:
Additive scoring (new way)
Multiplicative scoring (old way)

c. Do you think the practice of 'grid-circling' or
'grid-dancing' should be against the rules?

d. Do you think Rovers should be limited to
one callsign per Rover Expedition regardless
of the 'Family Rule?'

In the mailing of this questionnaire, include an
announcement that the new reflector is being set up,
soliciting representatives from the clubs and
individual non-club affiliated Rovers to participate
in the preparation of a new recommendation.
Interested Rovers should be required to request in
writing that they be added to the relfector list, and
clubs wishing to field a representative should be
required to request in writing that their named
individual be added to the list also. (Everyone to
include their email addresses).

2. Set up said email reflector.

3. An attempt should be made to coordinate events,
discussions and deadlines so that an answer is
reached in time to announce it for the 1995 running
of the June VHF Contest.

4. Issue a press release publicizing this fact,
including the words "On January 5, 1994, the Contest
Advisory Committee of the American Radio Relay League
recommended. . ." and a second press release
announcing the outcome.

Respectfully submitted,
ARRL Contest Advisory Committee
****

I think this pretty much sums it up. We are hoping that Rovers and clubs
will jump at the opportunity to create their own solution. I would like
for
you to circulate this announcement to wherever you think it should get
circulated, with a note that the Awards Committee will be meeting soon to
either pass it or throw it out, and that if the VHF Community supports
this
recommendation they should let the Awards Committee know they want a
'yes'
vote. Also, you and the thoughtful crowd should recommend any additional
questions you want to see on the direct-mail poll.

I think I sent you a list of who was on the Awards Committee before. If
you
need it, let me know and I can dig it out again.

73 and good luck!

Mark Beckwith, WA6OTU
EOM

ATTN: Radio Enthusiasts in the Worcester County area...

I am assembling people to form a local group that caters to various types of radio
communication activities (scanning, shortwave listening, ham radio, etc.). This group, among
other things, would help disseminate info about local frequencies and help newcomers with their
questions. A regular newsletter publication is planned as well as a informal two-way radio
notification system that will alert members to hot and interesting action happening over the
airwaves.

I'm looking for hams, CB'ers, public safety folks, and anyone else who has an interest as well as
anyone who wants to get started but needs more information. Needed are people who can ask
questions, have radio-related problems or ideas, can contribute info, and/or share their
knowledge and experience.

If you are interested in radio, whether an expert or a novice, please contact me and help form
this local group. Let's get some local activity going so that we all get more enjoyment out of it!

THANKS!

Rob Bellville, N1NTE
(rbellville@aol.com)
PO Box 515
Millbury, MA 01527-0515

Jim,

I do not have the info here at work. My advise is to use the local radio newsgroup, triangle.radio, and ask there. I'll look it up. 147.54 sounds right, and try connecting to the K4IWW-3 and query the nodes. One or two there should be TCP/IP.

NAVTEX is not a mode but a SERVICE. It is information relating to
weather, navigation and things of interest to mariners. It is
transmitted in plain text in AMTOR FEC. Any controller capable of
copying Amateur AMTOR FEC transmissions would copy the NAVTEX broadcasts.
The PK-232 by AEA or the MFJ or Kantronics equivalent would be suitable.

Thought y'all might find this bit interesting.

No, it has nothing to do with ham radio as such, but it's still interesting.

I finished my first semester of German recently, and our instructor was telling us about a cultural exchange program, where an American student hosts a German student for a month, then the American goes to Germany for a month. Cultural exchange thing. She said that if you're interested, there is an informational meeting, and you should contact Hiram Maxim (call him Max) if you can't make it but are interested. My first thought? "No way!"...So I went to the informational meeting, not because I wanted to meet Hiram Maxim, but because I was interested. :) Well, I did meet Hiram Maxim, and I mentioned ham radio (he helped me fill out a form, and it asked about interests). He said his great-grandfather was a ham ...

Yes, Hiram Hamilton Maxim goes to the university of Texas At Austin, and he's a really cool guy. He isn't a ham though, but he is a grad student.

This one is strange. The birth year is correct but October 1994 Hamcall lists name as Lou Lou Beaulieu. Is this a psudonym (or however that it spelled) ?

>WA7WYV Andy Griffith, actor
Hamcall lists this gentleman, Andrew Griffith, as being born in 1945. Andy Griffith (the actor) was born in 1926.

>WD4SKT Donnie Osmond, entertainer
This man is listed as Donald Osmond born in 1954.
The entertainer was born in 1957

Most of the calls in the post were correct with the exception of these above. I couldn't confirm all.
For all you country fans, Patti Loveless is a ham. Her call is KD4WUJ. Her husband, Emory, is W4WRO. She is a cw fan and does operate Field Day when she has time.

ARRL Bulletin 4 ARLB004
From ARRL Headquarters
Newington CT January 18, 1995
To all radio amateurs

SB QST ARL ARLB004
ARLB004 Spectrum changes

Spectrum changes

The FCC has voted to allocate spectrum from 2310 to 2360 MHz for
satellite digital audio radio services (DARS).

This band is part of spectrum from 2300 to 2450 MHz, all of which is
currently allocated to the Amateur and Amateur Satellite Services in
International Telecommunication Union Region 2, on a secondary
basis, with the exception of 2310 to 2390 MHz, which is not
allocated to amateurs.

The FCC said the new DARS would allow direct satellite-to-ground
radio to areas of the country and to minority and ethnic groups that
are inadequately served by traditional, ''terrestrial'' radio.

The Commission said that service and licensing rules for the new
allocation would be addressed in a later rule making. This was
action in FCC General Docket 90-357.

Propagation Forecast Bulletin 3 ARLP003
From Tad Cook, KT7H
Seattle, WA January 18, 1995
To all radio amateurs

SB PROP ARL ARLP003
ARLP003 Propagation correction

Due to author's error the solar data was left out of ARLP002.
Thanks to K4GSX for pointing this out.

Sunspot Numbers for January 5 through 11 were 25, 25, 11, 12, 0, 13
and 12, with a mean of 14. 10.7 cm flux was 76.3, 74.4, 74.7, 73.7,
73.8, 73.3 and 75.3, with a mean of 74.5.

Another error in last week's bulletin was minor one in the web
address for solar data. There was a missing slash bar, and it
should have read http://www.sel.noaa.gov.

Solar activity for the past few days has been quite a bit higher
than expected. Look for an update in the next ARLP004 in a few
days.

SUBJ: IPS DAILY SOLAR AND GEOPHYSICAL REPORT
ISSUED AT 18/2330Z JANUARY 1995 BY IPS RADIO AND SPACE SERVICES
FROM THE REGIONAL WARNING CENTRE (RWC), SYDNEY.
SUMMARY FOR 18 JANUARY AND FORECAST FOR 19 JANUARY - 21 JANUARY

1A. SOLAR SUMMARY
Activity: low

Flares: none.

Observed 10.7 cm flux/Equivalent Sunspot Number : 87/30

GOES satellite data for 17 Jan
Daily Proton Fluence >1 MeV: 1.6E+06
Daily Proton Fluence >10 MeV: 1.6E+04
Daily Electron Fluence >2 MeV: 1.8E+06 (normal)
X-ray background: B1.1
Fluence (flux accumulation over 24hrs)/ cm2-ster-day.

1B. SOLAR FORECAST
19 Jan 20 Jan 21 Jan
Activity Low Low Low
Fadeouts None expected None expected None expected

Forecast 10.7 cm flux/Equivalent Sunspot Number for 19 Jan: 90/34

2A. MAGNETIC SUMMARY
Geomagnetic field at Learmonth: unsettled to active

Estimated Indices : A K Observed A Index 17 Jan
Learmonth 13 3343 2322
Fredericksburg 18 22
Planetary 32 27

Observed Kp for 17 Jan: 2345 3445
2B. MAGNETIC FORECAST
DATE Ap CONDITIONS
19 Jan 12 Unsettled to active
20 Jan 20 Active
21 Jan 12 Unsettled to active
COMMENT: Coronal hole associated activity is expected on 20 January.

3A. GLOBAL HF PROPAGATION SUMMARY
LATITUDE BAND

DATE LOW MIDDLE HIGH
18 Jan normal fair-poor fair-poor
PCA Event : None.

3B. GLOBAL HF PROPAGATION FORECAST
LATITUDE BAND
DATE LOW MIDDLE HIGH
19 Jan normal fair poor-fair
20 Jan normal fair poor-fair
21 Jan normal poor-fair poor-fair
COMMENT: Continuing geomagnetic activity is expected to degrade
high lat HF comms conditions over the next few days. Conditions
at mid lats are expected to be better than yesterday, however
propagation is expected to be degraded during local night.

4A. AUSTRALIAN REGION IONOSPHERIC SUMMARY
Observed
DATE T-index MUFs at Sydney
18 Jan -14 depressed 25% during daylight hours. Near predicted
monthly values during local night.

Predicted Monthly T-index for January: 15

4B. AUSTRALIAN REGION IONOSPHERIC FORECAST
DATE T-index MUFs
19 Jan 15 Depressed 5 to 10%/near predicted monthly values
20 Jan 10 Near predicted monthly values
21 Jan -10 10 to 20% below predicted monthly values
COMMENT: Degraded/depressed HF comms conditions observed yesterday at
Townsville, Sydney, Hobart during local daylight hours. Strong spread
F observed at Sydney during local night. Continuing geomagnetic activity
is expected to degrade HF comms over the next three days.

587. CATV Frequencies

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-19 04:27:00 UTC
From: neal.griggs@rodent.raider.net
Message-ID: <1e5.7683.2725@rodent.raider.net>
Source record: 253457

HD@>carleton.ca>

HD@>Some months ago somebody posted CATV channel/frequency lists as used in
HD@>his/her city.I lost that list and need it.Could it be posted again??
HD@>Thanks for your trouble.
HD@>Regards,Herb.

Here ya go Herb......(in two parts no less..)

CATV uses the regular channels of 2 to 13 then uses "special" freqs
between (ie mid-super-hyper) which fall between regular TV channels.
Theses CATV freqs are often used by Amateur,Public Saftey,Business,
US Government,Aircraft. Often times causing interference to these
legit users. Often times it also causes TVI problems for the CATV
users. Even after the legit users have tried all means to correct
the problem. It is the responsiblity of the Cable industry to correct
problem to the legit users of these freqs. Often times the cable
industry does little to correct these problems and blames the legit
users of these freqs. But not all problems can be blamed on the
Cable industry. Sometimes the end comsumer uses illegal wiring to
add extra TV's to the system. Poor wiring, non cable type of
wiring causes some of these problems. Most cable companies have
special receivers/alarms in their vehicles to detect leaks.

TV Frequencies
US & Canada
(Regular 2 to 13)

> the right to vote.
>
Our local club (Mid-MO ARC in Jefferson City, MO) also has a
family/student policy, although ours is a little different.

Voting membership is available to all licensed hams, for $18 a year.
Spouses/children who are hams can be added with full privileges including
voting for $9 each. In addition, we will give full membership to an
individual who is an elementary school, high school or full-time college
student for $9. We, too, think that it is worthwhile to provide as much
encouragement as possible for younger hams and spouses to be involved.

Hope this answers your question. 73 - Alan NS0B

I've (not so) recently moved, and need to notify the FCC of a change
of address. If I remember correctly, there was a form in the back of
the Now Your Talking book, but that has long since been loaned out and
never returned. Does anyone have any pointers on obtaining a new
form?

thanx,

Curtis

W8JK may be many things (and half of us probably learned E&M and Antennas using his books)... but credit for the discovery of radio astronomy should not go to him but to Karl Jansky, or maybe even to Grote Reber (another ham, who, I believe is nowadays still doing research at the CSIRO, and not his Chicago backyard :-).

In this subject, Kraus authored a serious book called "Radio astronomy," and a less serious book called "Big Ear."

At the entrance of the National Radio Astronomy Obseratory at Green Bank, WVa, sits Jansky's rotatable curtain antenna and Reber's homebrew dish.

You can talk to the author using the internet. His address is printed
on each comic. I think its scottadams@aol.com.

I talked to him once. He is a marketing type managing a team of
engineers at a telephony business.

His stuff really hits home at times.

PRESS ADVISORY FOR IMMEDIATE RELEASE
For more information call:
Larry Earlix, KC6JEV, Monterey, Ca. (408) 372-8937

Local Ham Radio Operators Sponsor National Event In Monterey

On Saturday, January 21, 1995, from 7am to 2pm, local ham radio operators, along with the Naval Postgraduate School Amateur Radio Club, will host the 6th Annual WINTERFEST, a regional gathering of ham radio operators from all over the West Coast.

This event, free to the public, will be held in the College Center at Monterey Peninsula College. WINTERFEST will feature displays, contests, and demonstrations of amateur radio.

In attendance will be representatives from the AMATEUR RADIO EMERGENCY SERVICE (ARES), the folks who handle emergency messages during earthquakes and other disasters, the MILITARY AMATEUR RADIO SERVICE (MARS), the folks who keep families in touch with the troops during operations like "Desert Storm', and representatives from the AMERICAN RADIO RELAY LEAGUE (ARRL), the nation-wide organization of Amateur radio operators. Members of the club will also have booths to answer any questions about ham radio.
For those interested, there will be information on classes, to help folks pass the exam to become an amateur radio operator

Directly on the site, organizers will set up a "special event" amateur radio station, operating on emergency power. This station will make 2 way contacts with other ham operators, all over the world, in celebration of the event. Visitors may send, non - commercial, messages any where in the world, at no charge, through a digital radio network called PACKET. PACKET is a voluntary network of local hams, all over the

world, who use computers to automatically transmit, receive and relay messages to nearly every place in the world.

Demonstrations will include, classes on the Internet, how to become an amateur radio operator, how the amateur radio emergency service works, how to bounce radio signals off satellites and the moon, amateur television, Morse code and voice transmissions. State-of-art equipment will be on display and demonstrated. There will also be a flee market that will include venders from all aver the country.

WINTERFEST is an event sanctioned by the American Radio Relay League (ARRL), the nationwide organization of ham radio operators.

The Naval Postgraduate Schools Amateur Radio Club, which represents only a portion of licensed ham radio operators in Monterey County, has over 250 members.
Complete press packets covering activities, schedules, amateur radio, ARES and ARRL are available.

As far as I am aware, you can now only claim tax back if you come from a outside the EC. I came across this when we had frineds come over from the US last summer.

Additionally, you can only claim tax back, IF the retailer particpiates in the scheme. They issue a special form and fill it in with the amount of the purchase etc. The tax must then be claimed back at the point of departure.

Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 22nd of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

Now this week's headlines:-

The RSGB has installed its new president;

Two new RSGB Vice-Presidents have been elected;

and VHF stalwart Jack Hum, G5UM, has died.

We start this week with the news that Clive Trotman, GW4YKL was formally installed as the President of the Radio Society of Great Britain for 1995 during the evening of Saturday the 14th in Bridgend. We are sure that all those listening will join us in wishing Clive a successful year as President during 1995. In attendance were representatives of the French, Belgian, Dutch, German and Irish national societies.

At the Presidential installation, the election of two new RSGB Vice-Presidents was announced. They are Past President Julian Gannaway, G3YGF, and AMSAT-UK supremo Ron Broadbent, G3AAJ, The Society's Founders Trophy was presented to Hilary Claytonsmith, G4JKS.

Also last weekend, RSGB Council elected Mr T I Smudge Lundegard, G3GJW, as the Executive Vice-President for 1995.

Now some sad news: Jack Hum, G5UM, passed away last week. He was a Vice-President of the RSGB and a prolific writer on amateur radio - particularly VHF - subjects. A full obituary will appear in the March edition of Radio Communication.

A new GB2RS News Broadcast on 70 Centimetres is due to start shortly on 433.525MHz, channel SU21, using FM. It will commence at 10.30am local time every Sunday from the elevated site of 2E1CHY in Birmingham. This is the first broadcast of the GB2RS News from a Novice station.

The Berwick on Tweed VHF repeater, GB3BT, was shut down on Saturday the 7th of January after it developed a fault. The keeper, GM1JFF, regrets any inconvenience to users, but at the moment he is unable to say how long it will be off. For further details, contact GM1JFF, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Aruba, K4PI will sign P49I from now until Monday the 30th of January, taking in the CQ Worldwide 160 metre CW contest. Outside the contest look on the LF and WARC bands.

From Sri Lanka, G3REP, is active as 4S7RPG until March 1995, mainly on the LF bands.

And from the British Virgin Islands, W2GUP is active as VP2V/ W2GUP from now until the middle of March, on all bands 80 to 10 metres, CW only.

Next the Rally News and we know of one rally for today, Sunday the 22nd of January:

The Oldham Amateur Radio Club Mobile Rally is being held at the Queen Elizabeth Hall, Civic Centre, West Street, Oldham. Doors open at 11am, or 10.30am for disabled visitors. The event features many trade stands and a bring and buy stall. RSGB Morse Tests are available on demand, subject to two passport size photos and the relevant fee. Refreshments will be available in the Failsworth Suite. Talk-in is on 2 metres, channel S22 via GB4ORC. A prize and a certificate will be awarded for the furthest mobile contact with an operator on their way to attend the rally, up until 2pm.

And now the two events we know of for Sunday the 29th of January:

The Lancaster Rally, is to be held at Lancaster University, Lancaster. Doors open at 11am, or 10.30am for disabled visitors. This year's event is in larger halls than previously, with more trade stands, a bring and buy stall and special interest groups stands. Refreshments will be available. Further details can be obtained from Susan, G1OHH on 01524 64239 or 01384 896199.

The Fenland Repeater & Lincs Packet Groups Midwinter Junkarama is to be held at the Horncastle Youth Centre, Horncastle, Lincolnshire. The event starts at 10.30am. The event features trade stands, club tables. Refreshments will be available. Details can be obtained from G0PQB, whose address is correct in the RSGB Call Book.

Now, details of a rally which has not yet appeared in RadCom:

The Taw & Torridge Rally takes place at the Bideford Hall, The Pill, adjacent to Victoria Park, Bideford, North Devon on Sunday the 26th of February. Doors open at 10.30am. The event features trade stands and a bring and buy stall. Refreshments will be available. For further information contact Mike, G3PGA on 01271 860930.

Next a date for your diary.

The 1994 RSGB VHF Convention is to be held at its usual venue at Sandown Race Course, Esher, Surrey on Sunday the 19th of February. See January's RadCom, page 31, for full details of the comprehensive lecture programme.

Now for the HF contest news:

More RSGB LF CW Cumulative events take place this week: Two 3.5MHz Contests are today Sunday the 22nd and next Saturday the 28th. Both run from 1600 to 1800 UTC. A 1.8MHz Contest takes place next Wednesday, the 25th, from 2000 to 2200 UTC and a 7MHz event is next Sunday the 29th from 1000 to 1200 UTC. December's RadCom, page 78, gives detailed information.

The CQ World Wide 160 metre Contest takes place next weekend, from 2200 UTC on Friday the 27th, until 1600 UTC on Sunday the 29th. See January RadCom page 24 for further details.

Next some VHF contest news:

In the January edition of RadCom, the Adjudicator shown for the RSGB 144MHz CW Single Operator Fixed and All Others Contest which took place last Sunday the 15th is incorrect. All completed entries and check logs should be sent to: David Johnson, G4DHF, whose address is correct in the RSGB Call Book.

The first of five RSGB 70MHz Cumulative Contest events takes place today Sunday the 22nd, with the second leg next Sunday the 29th, both from 1000 to 1200 UTC. There are three sections, Fixed station single operator, Open and Listeners. See January RadCom page 81 for further details.

Special event stations active next weekend include:

GB4CAA, County Air Ambulance, operated by members of the West Bromwich Central Radio Club in aid of the Country Air Ambulance appeal in concert with thirteen other groups through the Midlands. The station is located at the Sandwell Hotel, High Street, West Bromwich, and will be operational on HF, VHF and UHF throughout next weekend. Visitors are very welcome. The other Air Ambulance appeal stations are GB's 0CAA, 2CAA, 0FFL, 2FFL, 4FFL, 0AAS, 2AAS, 4AAS, 0AA, 4AA, 5AA, 6AA and 8AA. For further details contact Ian, G0PAI on 0121 561 2884 prior to the event.

GB2RB, Robert Burns, will operate from Robert Burns Cottage in Alloway on Saturday the 28th on the 20 and 40 metre bands. The occasion is the birth date of the Scottish national bard. Further details from Mike, GM4SUC on 01292 443127.

And now the solar factual data:

The period from the 9th to the 15th of January saw solar activity at very low levels and the geomagnetic field at mostly quiet levels. The sunspot indices increased from zero on the 9th to 23 on the 12th before declining to 18 by the 15th. The mean for the period was 12. Solar flux levels increased every day from 74 units on the 9th to 81 units by the 15th, with the average for the period being 76 units. No flares were reported. The electron fluence declined every day to end the period at moderate levels. The x-ray flux levels increased from A1.1 units on the 9th, peaked at A4.1 units on the 12th, then declined to A2.9 units by the 15th. The average for the period was A2.2 units. The 90 day solar

flux average on the 15th was 83 units and is declining.

Geomagnetic activity was mostly quiet with the 15th down to an Ap index of only 3 units, the Boulder K indices recorded six zeros out of the 8 observations for that day. The 11th was the only day that was unsettled with an Ap index of 13 units. The average for the period was Ap 6 units. The state has been 'nil, nothing to report'. The aa indices as reported by the British Geological Survey from the 3rd to the 9th of January started the period at very unsettled levels with the 3rd at 52.6 nanoTeslas. Levels then declined every day and by the 8th were down to quiet levels at 12.9 nanoTeslas. The average for the period was 28.5 nanoTeslas, about K3. The December monthly geomagnetic Ap index was 9 units, with the smoothed level for June 1994 being 17.8 units. Bartell's rotation number 2205 started on the 12th of January.

I'll repeat the figures: Spots - 12; Flux - 76; Ap index - 6; X-ray flux - A2.2; December magnetic Ap - 9.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 6th to the 12th of January, averaged 6.7MHz. The best day was the 6th at 7.2MHz. The darkness hour lows averaged 2.4MHz with the 7th down to 1.9MHz. Spread F was recorded for 9 hours during the early hours of the 9th. The daytime highs are taking place between 10.00 and 14.00 hours with the darkness hour lows between 04.00 and 07.00 hours. On the 9th of January the GOES 8 satellite, situated in a synchronous orbit at 90 degrees West, started to supply the electron fluence data.

I'll repeat the figures. Highs - 6.7MHz; lows - 2.4MHz.

And lastly the solar forecast.

This week the quieter side of the sun is expected to be looking our way. Solar activity should be 'very low' to 'low' with the solar flux levels in to the 70s. Geomagnetic levels are expected to be quiet to unsettled throughout the period. Ionospheric MUFs for the south are expected to be about 19MHz and 16MHz for the north. The darkness hour lows are expected to be about 8MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Papa and G7 Tango X-ray series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Papa series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

SB SPCL ARL ARLX004
ARLX004 Balloon launch 1/21

Balloon launch January 21

A balloon carrying Amateur Radio is planned for launch January 21 from Boone, Iowa, by a group calling itself the Iowa Balloon Scientists.

Payloads will include a transmitter sending global positioning information on 446.000 with transmissions at bursts of 9600 baud once per second;

A packet digipeater on 145.550 (-0.600 split), running approximately one watt and switched on and off at 15 minute intervals;

A 144/440 MHz crossband voice repeater (listen on 437.250 (plus or minus) FM. There may be some temperature drift. The uplink frequency is uncertain at this time and will be provided on the packet beacon. Since this is the first flight for this payload, there may be less than optimum operating conditions.

The packet digipeater and voice crossband repeater will alternate at 15 minute intervals, with changes planned for 00, 15, 30, and 45 minutes after the hour.

Interested amateurs are advised to monitor beacons for details on other payloads and operating schedules.

The launch is planned for 1500 UTC. An HF coordination net will meet on 7.155 MHz LSB beginning at 1430 UTC with N0AN as net control station.

Information from Barry Buelow, WA0RJT.

SB DX ARL ARLD003
ARLD003 DX news

This week's bulletin was made possible with information provided by Tedd, KB8NW, the OPDX Bulletin and the Contest Corral Column from the pages of QST magazine. Thanks to all.

PHILIPPINES. According to The DX Newsletter, 4E7 prefixes were to start being issued as of January 1, 1995. VS6VW reported hearing SM0CNS/4E7 active on 160 meters.

KENYA. 5Z4FO has been on 75 and 80 meters with CW and SSB below 3800 kHz. Operating has been as early as 2215z and as late as 0415. He has also been working 160 meters, mainly with CW, on 1832 kHz at 0100z. QSL via KB4EKY. Listen for 5Z4DU on 75 meter SSB at about 0330z. QSL via KG4X.

ZAIRE. Joe, G3MRC, is signing 9Q5MRC and has been operating mostly 30 and 20 meter CW between 1900 and 2200z. QSL via G3MRC. Bjorn, LA9IY, is active as 9Q5IY. He has been on 18071 kHz at 1630z. QSL direct only via LA1K.

SOUTH KOREA. Harry, HL9HH, is looking for some help with low band WAS. He needs CT, NJ, NC, RI, SC and VT on both 40 and 80 meters. On 80 he is looking for DE and MD, and on 40 he needs MA, ME and NH. Listen for him around 3589 and 7009 kHz after 1030z.

PACIFIC DXPEDITION. Ed, K8VIR, will be doing a lot of traveling over the next six months. He should start amateur activity from New Caledonia, FK. Other stops should include Western Samoa and Tonga. QSL via CBA.

CURACAO. John, W1BIH, will be active as PJ9JT until mid April. Try 3506 kHz at 0130z and 40 meter CW between 0100 and 0200z, and again at 1130z. Check 21279 kHz at 1430z. QSL via W1AX.

CAMBODIA. Mike, VS6WV, reports that Sanyi, XU7VK, has been on 1829 kHz at about 1435z.

ZIMBABWE. Bill, Z21CS, can be worked on 18124 kHz around 1715z. When QSLing, do not send IRCs or green stamps. Bill does request packets of flower seeds for his XYL. QSL via Bill Taylor, Box 264, Kwekwe, Zimbabwe.

THIS WEEKEND ON THE RADIO. Over the weekend you get to choose from the ARRL January VHF Sweepstakes, North American QSO Party Phone, North Dakota QSO Party and the YL-ISSB QSO Party CW. Details for the NA QSO Party appear on page 127 of January QST. Info on the other events are on page 123 of December QST.

les.scofield@totrbbs.atl.ga.us (Les Scofield) wrote:

>Someone posted a msg that we should boycott PepperGun Foggers. Why?

Because of innapropriate usage of USENET for the propogation of blatantly
commercial advertising. This is innapropriate and you will find yourself
quite broadly despised for such anti-social and disgusting behaviour.

>Don't hams need to protect themselves and their families as much as
>any other responsible group?

These advertisements were not spammed merely to the HAM groups. In fact I
found them in several completely unrelated heirarchies.

>Perhaps crime is not as bad in your area as it is here in Atlanta?

I carry pepper gas, a kubaton, a spiderco clipit endura (tactical
'assault' knife), an a SW 3913 (9mm self loading pistol) wherever I go.

Perhaps you are against a fellow ham trying to
>earn/create a job so he is no longer unemployed?

If the 'job' they're attempting to pursue involves such outrageously
vandalous behaviour as exhibited in the PepperGun Fogger case, YES.

>Anyway here is the ad in question:

And you brashly repeat yourself...

You've studied The Green Card Lawyers (Hi Martha!) well. You deserve to
reap what you sow.

: >electronic filing that is supposed to take less than one week to
: >receive a liscense. I just contacted them to get my call letters and
: >was told they don't have an electronic feed yet and so the wait
: >will be 4-6 weeks even though I filed electronically !!!

: I am not sure where you took your test, but there should not have been an
: extra fee. That would not be legal since the FCC sets the maximum fee
: that can be charged to any applicant at any exam session. Currently
: the FCC has set that fee at $5.92

I paid $5.somethingorotehr to take my tests on January 4th.

: Since this NEW service only began on Jan 1, 1995, I am not sure how
: long it is going to take. Our goal is to eventually get the response time
: down to 48 hours. This would mean that after taking an examination,
: the candidate could dial via MODEM to the FCC computer and get
: his/her call sign information.

I was told that the exam results form the exam session I took part in
would be electronically filed wit the FCC by the ARRL. I took the exam
on January 4th, I called today, and my call was granted on January 18th
[exactly two weeks to the day I took the exam itself], and I now have a
new <and my first> call: KC7IHY.

So, I guess electronica filing is working :))

I run an R5 here and am really impressed by its performance. I should have
picked up an R7 for the extra two bands of coverage (30 & 40 meters) but I
have a dipole that'll take up the slack for now.

Speaking with Ken Albertson at Cushcraft he says that optimum
installation is eight feet above and away from other objects that may
interfere with the antenna operation. It's a half-wave so no radials
needed. Radials would, in fact, de-tune either antenna and adversely
affect the performance.

My R5 is installed at least eight feet as prescribed and works great. I
did speak to another individual who ground mounted his R5 and has had
great results with it. He spoke up after I told someone else what I was
saying above about the eight feet above anything. Well, if it works...do it!

Ah, very good. You've just proved that the code test is not the only skill test required for a license. We hear some folks asking why code has been singled out as the qualifying factor for HF access. You've shown that it is not the single necessary skill required.

Now, we come into ham radio already with the ability to read, speak, and write. These skills were involuntarily learned, thrust upon us at tender ages. My `acquired mental skill' remark concerns learning a new skill (voluntarily) that we didn't possess prior to our interest in radio. There is no new learned skill needed to push the PTT button, nor to tap the keys on a keyboard, nor to transmit ATV.

I believe some linguists might disagree with your statement that we are not born with a knowledge of speech. The grunts, groans, and cries of a newborn baby are a form of unlearned speech.

Well the Yeasu FT-11 needs a $90.00 adapter to operate directly from
12 volts D.C. "Yeasu did it again !" All you need with the IC-W2A for
direct D.C. operation is an OPC-288 cable. yes if you hold the Light,
B and # buttons, turn on the radio and wait for 2 seconds the receiver
is opened quite a bit wider. The 30 KHz tuning step is no fluke either.
High tech ? the radio is completely surface mount I am not sure about
what one means high tech is. But it and have some fun It has CTCSS
encode / decode built in, DTMF paging, no Alpha numeric paging though.
Icom's new Z1 has the Alpha numeric paging.

Mark,

I tried email this to you, but it bounced. You might want to look in the
October, 1994 issue of QST, at the article "Backpacking, Troop 404-Style".
The author discusses using a hand-held 40M/15M CW/SSB unit, powered by a
flexible solar panel. A Japanese unit, but I forget the manuafacturer.
Looks really good.

p.s. I envy the heck out of you!!! have a great time! :-)

Source record: 253500

> Best rule of thumb, UNPLUG and GROUND all your antennas.

> Kevin

I have read this advice before, but I do not understand why the grounding.
Wouldn't grounding the coax end make the antenna "more attractive" to a
lightning strike? I always thought that lightning would try to see ground,
and it seems to me that by grounding the end of the feedline, you are putting
the skyhook side of the system at ground potential.

Perhaps somebody can explain where I am going wrong on this one.

Tony,
I purchased an R5 from Cushcraft and I'm quit satisfied... I have no problems what so ever on SWR on all 5 bands but I agree it should be in the clear. For the moment she is standing next to my house on about 8 meters high and this is not an ideal situation. I also made it rougher so she can stand stronger winds because the weekest point is the connection of the radial with the isolator at the bottem. Especially the R7 has the weekest point there. I made is rougher with Epoxy glue and fiberblades... No problem and very cheap solution.
Have fun

Jeff, you have now totally lost your mind. No skill in any mode other
than CW , eh... Not only an insult to all experimenters and pioneers
of new modes, but an unqualified razz at those who have moved "beyond"
manual morse code. If i knew that ATV was an inherent skill i would have
been into long ago! The same for HF digital.

I have actually defended you in the past, at least your right to an
opinion, but this is so idiotic that i beleive that you may have
waived even these basic rights.

Read this quaote from your recent post and see if you can detect the
arrogance and ignorance it represents.

In the former location of my R7 I had once had a Hustler multiband vertical.
I had very much trouble with RF feedback, etc. Without special precautions,
the R7 in the same location gave no evidence of RF in the shack, which was
in a frame house about 75 feet away at the same level. Now the R7 is around
30 feet from the operating position, 10 feet above it, and I have no signs
on RF down here. 73 and GL Gerry K8EF@W8CQK.OH.USA.NA

628. Looking for CW radiotelegraph key

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-20 14:45:43 UTC
From: rdkeys@csemail.cropsci.ncsu.edu
Message-ID: <3foian$rks@taco.cc.ncsu.edu>
Source record: 253449

Fellow Brass Pounders, Telegraphers and CWISTS of the first water:

For a couple of years now, I have been looking for a CW radiotelegraph key. I only want to buy one, and I want it to last for the rest of my life (really), so I am after the very finest that one can lay hands on.

Of all the various keys I have seen/used in about 30 years, the only one that holds a candle is a thing called the ``Swedish Key''. I have only seen three firsthand, one at a hamfest recently in Richmond that had a bent nosepiece (hence I would not even go near it), one that belongs to a good friend from whom I would not dicker about said piece), and the last one is the key from the Queen Mary (same design, but not same manufacturer --- the design is almost identical).

I am sure we all have our opinions about telegraph keys, but most made these days are backwater gear. It is kind of like running a Model-T Ford or a Bugatti, if you know what I mean.

The key I am after is/was made by a company called:

``Lennart Pettersson & Co., Hoverberg'' (Sweden?).

I don't know if it has a particular model number.

If anyone has an address for this company, or for anyone who may be distributing/special ordering these keys, I would love to find out that information. Likewise, if anyone has an address for a company that makes this exact type key, I would love to find out that info.

I gotta get my fingers on one of these beauties....

Thanks!

Bob/NA4G

629. ? QSLs from NASA Apollo special event stations

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-20 15:31:38 UTC
From: jlockwd@ix.netcom.com
Message-ID: <3fol0q$ifs@ixnews3.ix.netcom.com>
Source record: 253433

This is directed at anyone who worked one of the approximately dozen special event stations operating around July 20 last year to commemorate the Apollo moon landing.

Have you received a QSL certificate yet?

Obviously I haven't or I wouldn't be asking such a question. I don't know if the batch of SASEed QSLs I sent out got lost or if the club stations have simply been overwhelmed with the response workload. Still, it seems odd to me that none of the eight stations I contacted have responded.

So what's deal here? Did you get yours?

Expiring minds want to know.....

Jim Lockwood - km6nk

630. gus sound card and sm4.15

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-20 15:32:40 UTC
From: wapembe@clark.net
Message-ID: <3fol2o$1l3@explorer.clark.net>
Source record: 253459
Cross-posted to: rec.radio.amateur.misc,rec.radio.amateur.equipment

i found the solution to my sound card problem and supermorse (4.15). first,
a quick recap of events.

i have a gravis ultrasound card (rev 2.4) that was set for base address 240.
the init string for the card was 240,1,1,11,5. this shows, in order, base
address, dma channel (play i think), dma channel (record i think), gus irq
and sb irq. the card works within dos and windows with no problems.

after reading the docs for sm4.15 i decided the init string for the blaster
support should be "A240 I5 D1 T1" for proper use. however, this did not work.

the program would lock-up after i selected the sound card (options->misc menus)
then made a couple of menu choices to select the training type. the only way
to regain control was with a cntrl-alt-del. i did receive a "run time error of
200 at 0F72:2AF6" once. i spent a very frustrating day rebooting my system and
trying various different blaster control strings to no avail. i finally called
the author for his ideas.

the only thing we could come up with was to rejumper the sound card for 220 and
try that. this did the trick. the super morse program is now happily talking
with my sound card.

>Ron VE3 TDH

if someone wants to send morse code, there's no reason why they shouldn't.

the same logic should apply to other signaling methods as well, instead of having to go get government approval before being able to experiment.

From: W6WWW@KD6XZ.#NOCAL.CA.USA.NOAM
To : RACES@ALLUS

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: COMMUNICATIONS VOLUNTEERS IN GOVERNMENT SERVICE
INFO: AMATEURS U.S (@USA: INFORMATION), CAP, MARS, RACES
FROM: AUXILIARY COMMUNICATIONS SERVICE (ACS) of the Governor's
Office of Emergency Services; the volunteer communications
reserve of the State of California.

Bulletin 359 MGT - An Overview - A look at the year 2000!
Release Date: January 1, l995

If the past few years are an example of changes to come, then we
may not recognize what serving in an Auxiliary Communications
Service will be like in the 21st century!

Today the situation is no longer just that of operation of radios
or packet. It involves much more than that; like assistance with
a wide array of SYSTEMS: telephone, satellite, microwave,
computers. When understood thoroughly, it covers everything from
disaster information and intelligence to the delivery,
installation and operations of systems in support of needs that
may not be even thought of as yet!

Just consider some of the evolving changes of the 1990's:
In the catastrophic Oakland Hills fire a special California
State Office of Emergency Services (OES) ACS-RACES team brought
in a specially equipped van, "RF-1", to setup multiple links to
telephones. By microwave they linked the command center in the
fire storm area (where phone and electric lines were out) to the
toll plaza of the San Francisco - Oakland Bay Bridge (line-of-
sight) and thence into the commercial phone system. This multi-
purpose sophisticated mobile emergency communications platform
is one of three designed, created and implemented by this team
of volunteers in the Bay Area. By-the-way, one of the team
leaders, although a communications volunteer, is not an
Amateur Radio Service licensee.

A CA Department of Forestry Ranger Unit developed and deployed a
Mobile Video Vehicle, a Jeep Cherokee, based on a commercial unit
owned by KGO San Francisco, CA.

State OES ACS/RACES participants developed satellite strike teams to transport and setup portable trailer-mounted satellite dishes as part of the state-wide Operational Area Satellite Information System (OASIS) which provides up to 32 telephone lines to a local jurisdiction via satellite. These units were deployed during l994 to incidents as appropriate.

In on-going preparation for future emergencies, State OES headquarters ACS responders provide DAILY agency administrative support and program management to assist counties and cities by preparation of ACS/RACES plans, writing manuals, producing informational materials, bulletins, flyers, and other support including secretarial and clerical assistance. They conduct tests and analysis of new equipment and systems. They provide support of Public Safety systems, transportation and delivery of equipment, and specialists in support of agency computer systems.

In a situation in late '94 Internet was used as a tool for the flow of vital data. In an earthquake at Eureka, California images and information was made available on the INTERNET.

There are literally scores of interesting and challenging opportunities for an Auxiliary Communications Service as part of its service for government. Can you imagine the possibilities that will abound in the 21st century! It's almost unbelievable what can be done, yet it is up to those who are willing - and who have the foresight - to do it!

Bid: $RACESBUL.360
Subject: RB360 Multiple Commit.1/2

From: W6WWW@KD6XZ.#NOCAL.CA.USA.NOAM
To : RACES@ALLUS

TO: ALL EMERGENCY MANAGEMENT AGENCIES VIA AMATEUR RADIO
INFO: COMMUNICATIONS VOLUNTEERS IN GOVERNMENT SERVICE
INFO: AMATEURS U.S (@USA: INFORMATION), CAP, MARS, RACES
FROM: AUXILIARY COMMUNICATIONS SERVICE (ACS) of the Governor's
Office of Emergency Services; the volunteer communications
reserve of the State of California.

360 Multiple Commitments 1/2 Release Date: January 9, l995

Query from Emergency Management Agency Official: Why do Amateur
Radio operators sign up with a multitude of places to serve and
then are not available to any particular unit when really needed?

Reply: Here are some ideas, perceptions and practices that result
in that situation:

Item 1. Those who want total control over their activity. They
"pick and chose" where and when to serve - IF at all. This can
also be an excuse for other concepts including a fear of
commitment itself.
This is often heard from those who say that their "unit is
never called on in an emergency" [meaning to operate their radios
and make them feel good about what they want to do but can't]
because:
a: they aren't committed enough to any one program to make it a
viable one. Or
b: they don't grasp the major changes in the government's
communications needs of the 90's. Or
c: the unit isn't an active part of its government and isn't
utilized due to such reasons as the above; or as a result of the
agencies perception of the people or the programs usefulness.

Item 2. Multiple card-carriers who want to feel like they are
"really doing something" when in fact they may be doing little
or nothing in a cohesive and directed manner.
This can be an extension of the need to control described in
item 1.
There will be those of this group who will contend that they
are "never called out and so they belong to several of the groups
so they will be able to actually do something" as they express

it. [review item one and also see next bulletin.] This can also be a person on a real ego trip. In either case it may be best to let them fade away without depending on them until they ask "why?". Generally, those with such attitudes can't be helped until they are ready to look beyond their own perceptions.

There are, of course, other aspects of the above, so please keep in mind that one of the major purposes of these bulletins is to aid on-going dialog between the agency Radio Officer and the paid staff. It isn't a matter of whether this presentation of this is "correct" or not (as there are other possibilities), but that it stimulates interchange of ideas and relationships on the topic. It will help to study the next bulletin before forming an opinion! The entire topic is complex and covered in related bulletins on "reasons" that people give as a justification of their actions. (continues next week)

Office of Emergency Services; the volunteer communications
reserve of the State of California.

Bulletin 361 MGT - Multiple Committments 2/2
Release Date: January 16, l995

Continuation of the reply to the query: Why do Amateur Radio
operators sign up with a multitude of places to serve and then
are not available to any particular unit when really needed?

Item 3. Misunderstanding by the person having multiple
commitments and/or poor leadership. Unit participants want
benefits they can understand, but this may not be apparent to
them. It takes an effort on the part of the leaders to place
benefits into focus for the participants; still, it is also up
to the participant to seek these out.

Item 4. Leaders must make the benefits of commitment to any
program clear, meaningful and purposeful. It doesn't matter
whether it's the RACES, Red Cross or whatever. Its leaders CAN
help participants realize the importance of committing to support
ONE program of the person's CHOICE. Leaders must understand their
own program, communicate its importance and develop participants
with an interest in really making a contribution to a specific
program. When that is done you can have people signed up with
several programs, but whose prime commitment is to one specific
program first and foremost. It's a matter of the mental
understanding and approach of the leaders and of conveying its
importance to the participants. It takes effort and time, but is
worth it in the long run. It begins with expectation.

Item 5. People with undeveloped self discipline have difficulty
pushing themselves into new ideas, applications and concepts;
such as "my commitment to the (unit name) is important to me and
to my community; I willingly agree to serve the unit of my choice
to the best of my ability." Without self discipline there are

people who won't make good operators/participants in any program. It's best to just let them float where they will - basically ignoring them - and build the program around the few really committed participants to whom the work and program is really important.

Since one of the major purposes of these bulletins is to further the rapport between the agency coordinator and the Radio Officer it is recommended that they be discussed in person at an appropriate opportunity planned by the Radio Officer.

I've (not so) recently moved, and need to notify the FCC of a change of address. If I remember correctly, there was a form in the back of the Now Your Talking book, but that has long since been loaned out and never returned. Does anyone have any pointers on obtaining a new form?

That one would have been out of date anyway, probably. Send an SASE to the ARRL* or the FCC in Gettysburg and request a copy of form 610 (yes, the same one that you apply for a license on), fill that out with the appropriate box checked, and you're done.

Yes, I acknowledged that in my response.

>>tender ages. My `acquired mental skill' remark concerns learning a
>>new skill (voluntarily) that we didn't possess prior to our interest

Yes, that's what I said in the last paragraph of my previous post.

>>in radio. There is no new learned skill needed to push the PTT button,
>>nor to tap the keys on a keyboard, nor to transmit ATV.

Well, I still think you're making an unfair generalization. Let's take
"tapping on the keys of a keyboard," for example. Because the keys have
letters and numbers on them, I can "type" by the hunt & peck method which
doesn't require me to "learn" where the keys are so I can touch-type
without looking at them. If I want to be a *skilled* typist I must
"acquire the skill" of touch-typing through the development of "muscle
memory" (a decidedly *mental* process, since it involves memory), much
in the same manner that one learns to play a musical instrument (like
a banjo, which I also do).

Now, I can send CW by the "hunt and peck" method by sitting there
with a book, looking up each letter, and sending them one by one. I
can then use a Morse decoder to copy for me off the air. No skill
required other than a small amount of dexterity to push the key handle
up and down. Better yet, I'll just use a Morse translator to convert
my hunt & peck typing to code characters, and I'll need *no* skills.
So what if the guy at the other end can't copy what I'm sending? If
he uses a Morse decoder to print out nothing but strings of letters,
he can read "behind" and separate them into words, can't he?

So, what I'm saying is that you don't *have* to develop some
unique mental skill to send or receive CW; it can be done by other
methods. However, if you *like* the concept of having to develop
the skill necessary to be a good CW operator, meaning you can send
at high speed, copy in your head, copy by typewriter, copy by pencil,
etc., then that's fine; what you're saying is that you find the mode
personally challenging, and that's great. But don't try to say
that one can *only* operate CW by developing some unique mental skill,
because that's an untrue generalization. You do know, of course,
that Morse first used a machine to copy onto an inked paper tape
rather than copying by ear? In fact, copy by ear was not the

original concept of the Morse telegraph at all.

The only justification *I* need for operating CW is simply that I enjoy it - and it's still a legal mode (may it always be so!). That should be all the justification *any* ham needs for operating *any* legal mode. Trying to "make some kind of case in favor" of *any* mode based on technical, social, moral, or whatever grounds is a waste of time. In fact, I'm always suspicious of those who are so insecure tht they feel they must *justify* what they enjoy doing on some scientific basis.....

If you like it, do it. If you don't like it, don't do it. No excuses are required in either case.

From: rolewis@gopher.chem.wayne.edu
Message-ID: <3fosit$56c@gopher.chem.wayne.edu>
Source record: 253525

Hi ham lovers and operators. I'm new to the scanning world, I received
my BC147XLT for christmas. Now, I'm trying to get hold of HAM frequencies,
but I don't feel like searching through all those freqs. If anyone has
any ham FREQS that can be useful to me in Detroit and any contacts,
information, etc. to help me out with ham freqs would be greatly appreciated!

Note: I'd appreciate any in the 29mhz, 50mhz, 144mhz, and 430mhz

Thanks,
Ronald

>Tony.
>ZS6NAC in Johannesburg
>

I have an R7 as my exclusive HF antenna. I am VERY happy with its
performance on all bands. Although, I use it on 20 meters most.
If you purchase, be sure to get it at minimum 10 feet off the ground.
The sales brochure shows it mounted to a deck at about 4 feet. Not
a good idea. 40 meters will be totally useless. At minimum, the
radials should be about 10 feet off the ground.

Does this mean that we can expect ads from S&W, Colt, Remington,
Savage, and other manufacturers of defensive weapons?

>Anyway here is the ad in question:
....

>KE4IKT
>73's

It is unlawful to advertise and import pepper spray in the state of Hawaii. So this begs the question: Does advertising on Usenet constitute advertising in the state in which the ad is read? We'll soon see since I've forwarded a copy of KE4IKT's ad to the Hawaii State Attorney General's office. This just might be a historical Internet ruling! Stay tuned.

Pete: You missed an important phrase: ``Operating a mode''. I said
nothing of building equipment, only operating said equipment.
As you know I build my own transmitters - that certainly is an
`acquired skill' but has nothing to do with operating them
(push this button, flip that switch...).

Pioneering, experimenting, and building are quite seperate from
day-to-day operating. This is not to sound arrogant but attempting
to equate operating your ATV or digital station with the mental skill
necessary to decode CW doesn't work.

Source record: 253378

PUT YOUR CALL LETTERS ON YOUR RESUME

We are planning to hire some of this year's college graduates
in engineering. From experience, I will have scanned
about 2000 resumes before June, so most of them only get one
look (by me - many other people also scan them).

One of the things that gets a resume into the other pile for
further consideration is a ham call. I've had good luck
hiring hams, so that's something I look for. And there
are lots of hams out there.

So, please put your call letters on your resume.

paul N1BWT

If you are interested in working in networks and data
communications, either hardware or software, emailing your
resume to me would put it right on top of the pile.

I'll also reply direct -

I'll make the Field Day pictures I placed on the Boston Amateur Radio
Club's World Wide Web Page available via anonymous FTP from BARC's FTP site.

This is the first time I've seen your message, so no flames on MY late
response ;-)

I'm not sure where I'll put them, but for this public announcement, check
the file: oak.oakland.edu:/pub/hamradio/0-Index2.txt

When I decide where I'm going to place the files, I'll place them in a
directory called "field-day". Simply perform a text search on
"field-day" and you will see where I end up placing the directory.

Also feel free to view the images directly on the Boston ARC's World Wide
Web page: http://www.acs.oakland.edu/barc.html

Follow the link for information about the Club from the home page, and you'll eventually get to the Field Day page, pictures and all.

Any questions? Feel free to e-mail me.

73 to all,

--

I have had and R5 then an R7 mounted at about 30' above
ground on a chimney and have no RF in the shack problems
at all. The R7 is mounted on a mast that has heavy guage
ground wire running down connected to an 8' ground rod and
I use heavy ferrites in all coax as a rule anyway.

Why would an antenna like the R7 be more susceptible to
RF feedback than any other antenna? If properly installed
shouldn't it look like any other 50 ohm load at resonance?

Yes, the W2A was the nicest dual band HT I've owned. The
best receiver and easiest to operate. I now own an FT530
and if the voltmeter and backlit keypad could be incorporated
into a W2A, it would be the best ever made. One weak point
of the W2A is the plastic rails that hold the battery pack on.
Some have had them break. 800rx was very hot on mine.

From: jthompso@nermal.santarosa.edu
Message-ID: <3fq4qn$bco@floyd.santarosa.edu>
Source record: 253458

hello,

recently I have been studing to take the Technician no-code lisence. If I pass this will be my first HAM radio liscense. I am confused about a couple of things that are not explained in the books; is the order from least privaleges to most novice, technician, etc... For tech class I need to know novice and tech stuff correct? I guess I am just confused about why is Tech higher than Novice if it is possible to get tech without code? If any of this makes any sense please e-mail me or post some answers. Thanks

John

>a ham to send code from the sound of it.

Well, from the books I've read, I've been told that no one knows accurately, nor exactly, the actual origin of the phrase "ham radio", and how it got associated with 'Amateur Radio'.

But they -could- be from one of the many possibilities suggested in this thread, and it's sub-threads. They could be from more than one (coincidence?), they could have been from another origin.

God knows, maybe he doesn't. But it's quite definately here to stay, and I don't mind a bit about it. 8)

But I do use 'Amateur Radio' when introducing myself. Not many people even know what that is, especially since we only have slightly more than 100 licenced amateurs to date.

Just be glad they call us hams... We could have been 'Bacons' or 'Tomato Soup' for all you know. Hell, even if we were, the same situation would probably apply.

a) We probably won't know the actual exact origin
b) We'll be trying to find out if anyone knows it's exact origin.
c) Some won't like it
d) Some won't mind
e) People like me, and definately some others, would just be so dammed proud being a licenced radio operator, we'd like whatever we call ourselves.

73 de 9V1ZY <- not bacon, not tomato soup. A ham who got his call on 27 Dec 1994. And darn hell proud of it. 8)

Joe...I've been using the Yaesu 12v adapters for years and have never had a problem with one. I own 2 FT470's and a FT411 and use the eliminators with all three....never any problems. The power cord is fuse protected which adds to the security of the device.

Good luck...

Source record: 253467

There is a tremendous problem on HF that threatens amateur radio as a whole. You see there is a station on 3.975 mhz and 14.275 mhz, that has decided to broadcast a message to the listening world. It is a simulcast of a loop tape.

He plays an endless loop tape often from an unattended transmitter site. He has decided what he wants to do with this frequency is better for amateur radio than what we could do with the frequency. He plays a 45 minute tape every other hour.

Recently, he was able to trick the FCC into giving him a clear frequency. He involved even the state department with his trickery and deciept. When they realized they had been tricked they rescinded there order immediately. I have been informed that the matter created quite an embarassment for everyone involved.

A lot of the guys have moved off of the frequencies rather than put up with this any longer. I can't move. You see if we don't fight Glenn Baxter on this it will pave the way for any one else who wants to do the same thing. Maybe many others will soon broadcast their hearts out all over amateur radio bands. Or even if Baxter wants to expand his coverage even more. I'm telling you this can destroy amateur radio.

The real estate if you will of the amateur radio bands is a very valuable commodity. Some politicians would love to see amateur radio loose ground. This can very well escallate.

The good news is we can stop this man. Not just I but all of us. Collectively we have a tremendous amount of leverage. If all of us mobilize we can force the FCC to make a ruling on the matter.

We owe that to our hobby. Everyone here is currently, has been or will recieve something from amateur radio. We owe it to ourselves to preserve this hobby for the future.

I have been told by a senior official with the FCC that now is the time to move and we should move by writing letters and getting petitions signed.

K1MAN stepped in his own poop when he tricked the FCC and state department into allowing him to broadcast on the emergency channels. I have been told during my conversation with the FCC that they never intend to let that happen again. They are completely fed up with this lunatic.

The ATTORNEY GENERAL in the state of Maine wants his head on a platter. She has recieved many of his fellony affadavidts. These are his generated forms that look threatening and very legal. However they have no value. The ATTORNEY GENERAL has told him to stop his illegal practice of using her

office to intimidate law abiding amateur radio operators.

Now is the time to move. We need everyone's help. We can squash this guy like a pesky mosquito if everyone will take 10 minutes and write three letters. One letter should go to your congresman. One letter to your senator. Finally send a letter to the FCC requesting a ruling on the matter. Please, it only cost 32 cents for a stamp.

Petitions can be passed out. Everyone that can read this can build a form to get out the word to the two meter and Hamfest community.

The address to write at the FCC is :

CID
Compliance Information Division (use to be called the Wireless Telecom Div)
attn: Magalie Salas
cc: Rockie Patterson
1917 M. Street
Washington, D.C. 20554

That's all it will take. But it will take that . It will take all of us collectively to get this done. It will not work if just one or two of us do it. All of us collectively must make an effort. If we mobilize we can absolutely get this man out of our lives and off of our radio.

Please I ask you. Sit down and write your congressmen, senator and the FCC.

Sincerely,

Don Simpson

Well John, this requires a bit of history. At one time there were two permanent licenses, General and Technician. The only testing difference was the code test, Generals had to do 13 WPM, Technicians had to do 5 WPM. The written tests were the same. Techs held all priviledges above 144 MHz, where Morse was generally not used. Having a Morse test at all was not really warranted, but inertia kept one alive since all existing licensees had had to go through the ritual and insisted that newcomers do likewise. The idea for the Technician license was to encourage the development of the then empty VHF/UHF spectrum. Initially, Techs were a small percentage of amateurs. Novice was a one time, non-renewable, one year license, designed to introduce newcomers to mainstream HF Morse operations. It had a very simple written exam (apparently Morse operators weren't expected to be very technically astute). Amateur radio was growing vigorously, HF operations dominated amateur activity, but VHF FM started to become popular, and so did the Technician license.

Then in 1968, along came Incentive Licensing. This diluted the privileges formerly held by Generals on HF, and required Generals to take new exams, the Advanced and Extra, to regain the priviledges that they had previously held. This was met with a lot of anger by existing Generals, and a good number went inactive. (Note that most amateur operations were still on HF at this time.) Technicians were unaffected. They retained all of their previous priviledges. There was, following the birth of Incentive Licensing, a 20 year decline in amateur radio growth, though VHF FM, and the Technician class, continued to grow more rapidly than other classes, because Incentive Licensing really had no effect on them.

(Note: growth did not stop completely, except for two or three years, and that was masked by the renewal interval at the time. What happened was that the growth *rate* dropped so that amateurs as a group became increasingly older, with the average age of amateurs actually increasing at a rate of greater than one year per year in some years. Pre-Incentive Licensing, amateur radio was growing at a rate faster than general population growth. Post-Incentive Licensing, growth rates trailed the

general population. A healthy growth rate would match that of the general population.)

Then, to try to reverse the decline in amateur growth (the average age of amateurs had reached 57 years old), the FCC instituted what was called Novice Enhancement. This granted limited voice privileges to Novices on selected frequencies, and made the license renewable. This was met with a yawn by the public, and resulted in little change in amateur growth. At this same time, the Technician exam was changed by splitting out the HF specific parts of the General/Technician written exam and removing them from the Tech exam. Techs were also granted Novice priviledges on HF at this time.

Finally, came the code test free Technician license. This was the Tech license exam of Novice enhancement days, stripped of the 5 WPM Morse exam and stripped of the frequency priviledges below 30 MHz. *This* finally recaptured some public interest, and amateur radio has started to grow at a healthy rate again, albeit mainly at VHF/UHF. The Tech Plus is what was just the Tech in Novice Enhancement days, including the Novice HF frequencies.

So now the public sees two basic licenses for amateur radio, the Tech and the Novice. Since the Tech offers much greater privileges than the Novice, and it isn't burdened with what is perceived to be a largely irrelevant manual Morse decoding requirement, it's the more attractive route for most. The Novice continues to attract some who are interested mainly in HF Morse operations, and who are technically challenged by the Tech Plus written exam, but those are relatively few in the modern world.

HF is currently languishing, with less growth and activity than on VHF/UHF (considering the licensing history, and the relative amounts of spectrum available, this isn't surprising). HF operation is no longer the *dominant defining factor* in amateur radio. Most traditional HF amateurs haven't grasped the significance of this yet. The primary non-voice use of spectrum outside of HF has become machine digital (and it's the second most popular non-voice use on HF already). The typical old school HF amateur hasn't grasped the significance of this either. To quote an AT&T ad, "They will."

Amateur radio is begining a series of demographic changes as radical as those caused by Incentive Licensing (but thankfully in the opposite direction). It's up to us to see that those changes have positive effects on amateur radio, rather than the grossly negative effects that Incentive Licensing has had.

688. 2m/70cm propagation and the weather

Newsgroup: rec.radio.amateur.misc

Hi, Being a previous 70 cm ssb/cw enthusiast, I wanted to share a few thots with you. On short paths, air moisture has virtually no effect on 432 propagation, unless the moisture gets into your coax (very common problem). On longer paths, the moisture increases the troposphere index of refraction, and can lead to unusually strong signals. I used to keep a nightly schedule with a guy in MI (was WB8BKC) from Sterling VA. On dry-air nights, (like after a high pressure came in), the signals would be poor. On humid, warm nights, we would get 30dB S/N armchair-copy propagation. You can read more in the ARRL hdbk, or in past QST issues. I look up specifics, if you want. GL es 73 de W3IY/4

Hi Grant..

The Z 1's removable front panel attaches to an extension cable and becomes the speaker mic, complete with the display. I also think when the Amateur community starts letting the manufacturers make a amateur only radios, We will all be better off.

But I have already purchased my " badge " as advertised in " CQ Magazine " and opened up my radio and stand at ready with my Red Flashing Light and Siren to provide communications on the public service frequencies with my DC to daylight coverage radio " SHOULD the NEED Arise " ;-) <VBG>

If someone places and ad in the NY Times and then someone in Hawaii reads the ad in the paper Hawaii could not hold either the NY Times nor the one who placed the ad, responsible.
The reader would be the one held responsible to comply with the laws of the state of Hawaii.

I am sure the internet newsgroups would be treated the same as national newspapers and TV, radio networks as to advertising.
If I advertise Pepperguns on RUSH's radio and/or TV shows and someone in Hawaii listened to or saw RUSH's show, could Hawaii take action against TUSH or the individual who placed the ad? I think NOT.

Whereas some forms of advertising can be controlled as to the location
where it is distributed, the internet is open to any users worldwide and
the sender has no possible form of control over the distribution.
therefore the user who places an ad on the net can not be held
accountable for someone reading it.

Don Simpson (ko4ta@mindspring.com) wrote:
: There is a tremendous problem on HF that threatens amateur radio as a whole.
: You see there is a station on 3.975 mhz and 14.275 mhz, that has decided
: to broadcast a message to the listening world. It is a simulcast of a loop
: tape.

: He plays an endless loop tape often from an unattended transmitter site.
: He has decided what he wants to do with this frequency is better for
: amateur radio than what we could do with the frequency. He plays a 45 minute
: tape every other hour.

(More stuff deleted)

I have listened to some of the transmissions from this station. I used to
try to make contact with the Bermuda Hams on 14.275 on Sundays only to be
swamped by K1MAN. Without trying to start a flame war or really long
discussion, I have a question. Has this station done anything beneficial
for Amateur Radio? I dislike the idea of anyone taking over a frequency
and claiming it for their own but I have been on HF long enough to know
that this station is not the only one that practices this. All DX Nets
and other types of Nets do the same thing. The net controllers boom in on
a particular frequency at a predetermined time regardless the fact that
the frequency may be in use. I have heard people calling skeds over
others on frequencies. The fact that this is one-way transmission
should be sufficient to eliminate it, as I believe most countries have
regulations prohibiting one-way Amateur communications. I would like for
an responses to be directed to my Email address, as it would only block
up the newsgroup. I just would like to know if there is any positive
purpose to K1MAN. I can't believe that the only reason for so much
disparagement is the fact that it just starts transmitting without
listening or without regard for frequency occupation.

Please don't think this is a defense of K1MAN either. I would just like
some clarification as to what the station represents and whether this
purpose has any merit, according to the Amateur population.

Like I said before, please don't respond to the group, respond directly
to me.

Revision: 1.7 10/23/94 20:52:50

Rec.radio.amateur.misc Frequently Asked Questions
Part 1 - Introduction to the FAQ and Amateur Radio
------------------------------------------------------------------------------

This is a regular posting of frequently-asked questions (FAQ) about Amateur
Radio, also known as Ham Radio. It is intended to summarize some common
questions on the rec.radio.amateur.misc newsgroup and Info-Hams mail list
as well as to help beginners get started.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them.
* If you are a new user, please print and review the FAQ articles and look at
the instructions in the news.announce.newusers newsgroup before posting any
articles. If you don't find the answer in the FAQ and you have tried
elsewhere, then you have "done your homework" and it is acceptable to ask
the question on the UseNet newsgroups. Along with your question, please
state where else you have looked for the answer so others also know that
you have done your homework.
* If you are an experienced user, please help by refraining from answering
frequently-asked questions on the newsgroup if they are already answered by
the FAQ articles. Instead, send e-mail to the user who asked the question.
(It will be helpful if you include the part of the FAQ that answers their
question, but not the whole thing.)

The FAQ cannot always prevent people from posting repetitive questions. But
even if hundreds of questions get posted, it saves you from having to answer
them hundreds of times. Also, a friendly pointer to the FAQ in your first
answer can help that person refer to the FAQ in the future. That is when we
can begin to get a real savings of network bandwidth.

To reduce the size of each article, the FAQ information is posted in 3 parts:
Part 1 - Introduction to the FAQ and Amateur Radio
Part 2 - Amateur Radio Organizations, Services, and Information Sources
Part 3 - Amateur Radio Advanced and Technical Questions

Table of Contents
-----------------
Dates indicate last modification.

** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.

Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do? (pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US? (9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio? (10/92)
** Can I take my HT on an airplane and operate it if I get the permission of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 1--

** Introduction to the FAQ

* How to Contribute to the FAQ Articles

We accept suggestions from the Amateur Radio community. Please consider that all new contributions need to be SHORT and concise in order to be included. If a contribution is too long, the FAQ editors can help you find a more appropriate FTP archive or mail server for your article.

We always accept corrections. Please allow some time (often not the next issue of the FAQ) because the FAQ maintainers do this as volunteers so each must give higher priority to their employers.

Send correspondence to hamradio-faq@amdahl.com so that it will reach all the FAQ coordinators: (listed in alphabetical order)

Ed Hare KA1CV ehare@arrl.org (Newington, CT, USA)
Jack GF Hill W4PPT root@jackatak.raider.net(Brentwood, TN, USA)
Ian Kluft KD6EUI ikluft@oes.amdahl.com (Santa Clara, CA, USA)

Paul Schleck KD3FU pschleck@gonix.com (Omaha, NE, USA)
Chris Swartout N6WCP cas30@uts.amdahl.com (San Jose, CA, USA)
Steve Watt KD6GGD steve@wattres.sj.ca.us (San Jose, CA, USA)
Rosalie White WA1STO rwhite@arrl.org (Newington, CT, USA)
Derek Wills AA5BT oo7@astro.as.utexas.edu (Austin, TX, USA)

* Please Send Questions to the Newsgroups, Not the Editors

We wish it wasn't necessary to say this. Please don't send questions to the editors (unless you are sending an answer with it as a submission for the FAQ.) The proper procedure for questions on UseNet is
1) Read the FAQ
2) if it isn't there, check other sources (see Part 2 of the FAQ for electronic sources including Mosaic/WWW)
3) post on the newsgroup

The Internet has become an atmoshpere where questions are asked of everyone as if they have an infinite amount of time to help. The volunteers who maintain the FAQ do not have time to answer questions. Some FAQ maintainers on other newsgroups have been led to believe that no good deed goes unpunished - let's avoid bringing the same end to this effort.

* Call for FAQ Editors

As with any volunteer effort, new volunteers are often needed. The previous paragraph may have already given a hint about this: we need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

* Acknowledgements

All questions listed as modified "pre-4/92" are entirely Diana Carlson KC1SP's work or her editing of a contributor's work. Diana established this FAQ and credit is due to her for founding this project.

Thanks to Devon Bowen KA2NRC for accepting this FAQ in e-mail every month to keep the FTP archive at ftp.cs.buffalo.edu up-to-date.

* Notes on "Netiquette"

The rec.radio.amateur.misc newsgroup and Info-Hams mail list have a large daily volume of traffic. They can operate more efficiently if the following netiquette guidelines are followed. Please take them seriously.

* If you are new to UseNet, the introductory articles in news.announce.newusers are required reading. Go to that newsgroup now. Definitely, read the instructions there before posting anything. Other rec.radio.amateur.* readers will appreciate it!
* Pick the right newsgroup. Use only the most specific newsgroup for your subject. For example, a question about a homebrew antenna only needs to be posted to rec.radio.amateur.antenna. Also, don't post to rec.radio.amateur.misc when the subject can go in another rec.radio.amateur.* newsgroup. So, when there is a more specific newsgroup, that's the one you want.
* When posting a followup article, ALWAYS try to minimize the number of lines of quoted material from the original article.
* As a general rule when you try to determine whether to reply to someone by e-mail or with a followup article, remember to "praise in public, criticize in private." It's OK to disagree technically but be careful not to attack the person with whom you disagree. Also, be careful with your use of the word "you" when posting a follow-up article. Many unnecessary flame wars have started that way.
* Use a descriptive subject. For example, a message subject of "Ham Radio" tells the reader NOTHING about the contents of your article since the whole newsgroup is about Ham Radio. Other examples of subjects which are so broad that they become useless could include, "Help," "A Question," "Antennas," or "Frequencies." Maybe "Books on Antennas?" or "Where can I find Repeater Frequencies?" would be better, for example. Remember, in a busy newsgroup a lot of users decide which articles to read from the subject line alone. If you post, don't deprive yourself of an audience!
* Before answering a question, check if the FAQ adequately answers it or if someone else already answered it. If you have more to add, make sure to reference either the FAQ or the related articles.
* If a user posts a question which is directly answered by the FAQ, there is no need to post an answer - the information is already available on the newsgroup. Instead, just send an e-mail message which politely explains where to find the FAQ. They will probably appreciate it if you include the answer to their question. (Don't send a "nastygram" - that would just discourage future participation.)
* Pay attention to the size of your audience - use the "Distribution:" header. If you leave it blank, your message will go to every civilized country in the world and occupy disk space in all news systems in all those places. If that's what you intend, that's fine but make sure your article is relevant outside your country. (In particular, Hams should already know there is more to the world than just their own country.)
* If you have an item for sale, please limit the distribution area so that, for example, an article about a radio for sale in New Jersey won't get to California or Europe. If you wish, you may cross-post

your for-sale article to rec.radio.swap.
* Software sources should be posted to either alt.sources, comp.sources.misc, or comp.sources.* for a specific machine type. Software binaries should be posted to the appropriate subgroup of comp.binaries.

** What is Amateur Radio?
Amateur Radio is a non-commercial radio communication service whose primary aims are public service, technical training and experimentation, and communication between private persons. Amateur Radio operators are commonly called hams. Hams often communicate with each other recreationally but also provide communications for others at public events or in times of emergency or disaster.

** Who can become a ham?
The answer to this question differs in every country.

The answer for the USA is listed below. If your country has a newsgroup specifically for it (i.e. UK, Australia, Germany) the most accurate answers can be found there. See Part 2 for the list of region-specific newsgroups.

If that doesn't help, the American Radio Relay League (ARRL) may be able to help because they communicate with similar organizations in other countries, probably including yours. They can be reached by electronic mail or surface mail (see Part 2.)

In the USA, anyone who is not a representative of a foreign government can be an Amateur Radio operator. There are tests that you must pass to get a license, however the tests are not insurmountable. On that general level, the requirements are probably similar in almost every country.

For more information on becoming a Ham in the USA, the ARRL has a toll-free number where you can request information: 1-800-32-NEW-HAM (don't worry about the number being one digit too long - the phone system ignores it.) Other information can also be obtained from the ARRL e-mail information server in the file called PROSPECT. Details on the server are in Part 2.

** Where can I locate information and books on Amateur Radio?
Your local Radio Shack sells some ham radios and Amateur Radio license books. Books can also be obtained through the mail from ham radio organizations, such as ARRL in Newington, CT (203-666-1541) and W5YI in Dallas, TX (1-800-669-9594). There may be one or two ham radio stores in the local area (ie, within 50 miles). Try looking in the Yellow Pages under Radio Communications.

For the Novice license, get a Novice License manual, plus 5-word-per-minute Morse code tapes, costing around $25. For the Technician license, get a combined Novice and Technician License manual, and an FCC

Rules manual, costing around $32. The FCC Rules manual is a good idea for Novice also, but not necessary, since the Novice License manual contains all the FCC Rules that are required for the Novice License.

The ARRL Education Activities Department has several programs to help amateurs (or prospective amateurs) to get started. Ask for a "New prospect package" available free of charge, from ARRL HQ, Educational Activities Department, 225 Main St, Newington, CT 06111.

Information on Ham Radio can also be obtained with your computer. Part 2 of this FAQ contains a significant amount of material on that subject.

** How much does it cost?
To take the tests for any class of amateur radio license, there is a small charge (around $5-$6 currently) to cover copying costs and running the testing sessions. (Due to changes in 1993, Novice tests are under same procedures as the others.) The cost of a radio is really dependent on what you want to do. You can make your own radio and antenna for under $150. You can buy a used single-band radio for $150-$300. Or you can buy a new multi-band multi-mode radio with all the doodads for $300-$3000. I'd suggest you learn more about ham radio, talk to local hams, find out what you want to do with ham radio first.

** Where can I take the tests?
The Novice tests Used to be given by any two qualified hams of General class license or above. Now all the license tests are given by three qualified Volunteer Examiners (VEs) who volunteer their time.

To locate an ARRL testing session in your area, you can contact ARRL at 203-666-1541 x282.

See also the section "Where can I find VE sessions in my local area?" in Part 2 because more information is available via UseNet.

** What are the tests like?
First off, come prepared to VE sessions. Bring: TWO forms of ID, one of which has a picture on it; a calculator (if necessary); a pen and two pencils; the applicable examination fee (around $5-$6 for 1993); the original AND a copy of your current Amateur Radio license (if you have one); the original AND a copy of any CSCEs for tests you've already passed (if you have any).

Each of the written tests (Novice, Technician, General, Advanced, and Extra) are generally a multiple choice test of approximately one-tenth of the question pool. For example, if the question pool is approximately 300 questions, then the test will be a 30-question test. You need to get 75% correct to pass. Note that they truncate to determine the correct number of questions. That means for a 30 question test, you need to get 22 right, which is actually only 73.3%.

Once you've paid the small fee for Technician-Extra tests, it costs no extra to take another test, so I'd suggest you keep taking the next more advanced test until you fail. If you pass the written but not the Morse code (or vice versa) for a specific class license, you have up to one year to take the other test before you would have to retake the written test again. Note that some VEs will not allow you to take the written test unless you've first taken the Morse code test.

The Morse code test is a receiving test only. The test run 5 to 7 minutes. After the test, you are given a 10-question multiple-choice or fill-in-the-blank test. Passing grade is 7 or more. If you fail the 10-question test, the examiner team will examine your copy sheet to see if you have 1 minute of solid copy with no errors. For 5 wpm, that's 25 characters, for 13 wpm, that's 65 characters, for 20 wpm, that's 100 characters. If they can find 1 minute solid copy, you've still passed.

Hints on Morse code tests: Generally, it will be a standard QSO (conversation), and it MUST contain at least one of each of the following:
26 letters A-Z, 10 numbers 0-9, comma (,), period (.), slant or slash (/), question mark (?), double dash prosign (BT), end of message prosign (AR), end of contact prosign (SK).
The letters count as one character, all others count as two characters. There are a couple other prosigns which are worth knowing, but will not be on the test, like "I'm done talking, next" is K, "I'm done talking, back to you" is KN, "Please wait" is AS.

** What can I do with a ham radio license?
There are so many things, it's a difficult question to answer, but here's some ideas:
* Talk to people in foreign countries.
* Talk to people (both local and far away) on your drive to work.
* Help in emergencies by providing communications.
* Provide communications in parades or walkathons.
* Help other people become hams.
* Hook your computer to your radio and communicate by computers.
* Collect QSL cards (cards from other hams) from all over the United States and foreign countries and receive awards.
* Participate in contests or Field Day events.
* Provide radio services to your local Civil Defense organization thru ARES (Amateur Radio Emergency Service) or RACES (Radio Amateur Civil Emergency Service).
* Aid members of the US military by joining MARS (Military Affiliate Radio System).
* Participate in transmitter hunt games and maybe build your own direction-finding equipment.
* Have someone to talk to on those sleepless nights at home.
* Receive weather pictures via satellites.
* Build radios, antennas, learn some electronics and radio theory.
* Talk to astronauts in space, or use the moon to bounce signals

back to people on the Earth.
* Experiment with Amateur TV (ATV), Slow-Scan TV (SSTV), or send
still-frame pictures by facsimile.
* Experiment with amateur satellite communications.

** What can't I do with an Amateur Radio license?
The most important thing you can't do is transact business of any
kind over ham radio. Interference to other hams or services, as
well as obscene, profane or indecent language is not tolerated and
is illegal. Music and broadcasting are not allowed on ham radio.
Some personal conversations may not be appropriate to Amateur Radio.
Do you really want the whole world to hear about Aunt Mabel's
hemorrhoids?

** I'm interested, who will help me?
There are hams who are willing to become "Elmers" (mentors, helpers)
in your local area. Look around and ask local hams. Search out local
radio clubs. As well, some people have volunteered to be an Elmer
over the Usenet. A list of UseNet Elmers and their e-mail addresses
is posted to the newsgroup monthly. If anyone wants to be an Elmer,
send e-mail to
elmers-request@unomaha.edu

There is also a lot to be said for exploring on your own. Take a
look around the FTP archives and e-mail servers listed in Part 2.
There's so much out there on UseNet, you'll find plenty of things
you're interested in.

** Should I build my own equipment or antenna?
[see also rec.radio.amateur.homebrew and rec.radio.amateur.antenna]
"Homebrewing" is a fun and educational part of ham radio. It is a
thrill to build your own transmitter and put it on the air. However,
building your own receiver can be quite complicated; if you don't have
electronics experience, you may want to buy a receiver instead. Most
homebrew transmitters are QRP (transmit very low power). That's fine
for an experienced ham with a very good antenna, but a Novice ham will
just get frustrated. Your first rig, therefore should NOT be a home-
brew.

Antennas can be much simpler projects than the transceiver, though
some types are also quite involved. Most hams build their own anten-
nas for base station use and buy antennas for mobile (car) use. Most
beginner ham books describe how to build different types of antennas.
Order of difficulty, from easiest to more difficult, for some common
antennas are: wire dipole, Zepp, Yagi, Quad, and Log-Periodic. Books
from many sources, including ARRL and several Hams, discuss antennas
in depth.

When building or even understanding antennas, it is good to know the
relationship between the antenna element length and the frequency or
wavelength it is designed for. An antenna performs best at multiples
of 1/4 of that wavelength, though 5/8 wave also has beneficial qualit-

ies. The wavelength is related to the frequency with the following formula:

wavelength (in meters) = 300 / frequency (in megahertz)

You do not need a huge antenna or tower like ones you may see around your neighborhood. Large beam antennas and 40-foot towers are very expensive. As a beginner, a simple dipole antenna is perfectly adequate. As you gain experience (and money :-), you may want to invest in something bigger.

If you can afford new rigs and antennas, there are many mail order stores that advertise in ham radio magazines. If you want to buy a used rig, the best place is at a "hamfest" (ham flea market). You should take along an experienced ham, since some of the used equipment may be inoperative, overpriced or poor quality. You can also answer ads in ham magazines or posted at ham radio stores, although often, by the time you call, the equipment has already been sold.

705. rec.radio.amateur.misc Frequently Asked Questions (Part 2 of 3)

Rec.radio.amateur.misc Frequently Asked Questions
Part 2 - Amateur Radio Organizations, Services, and Information Sources
------------------------------------------------------------------------------

Questions discussed in Part 2: (dates indicate last modification)
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)
** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 2--
```

** Where can I find Ham Radio information with a computer?
This question has many answers spanning several electronic media including WWW, UseNet, electronic mail, the Internet, dialup BBS's and others. Various electronic information sources are summarized under the subheadings that follow.

All electronic mail addresses listed are in Internet format. If your site is not connected to the Internet and does not support Internet-style mail addresses, you will need to contact either your system administrators or a local "guru" to find out how or if you can send mail to the sites listed. Ask them, "how can I get mail to the Internet?" and show them the address you're interested in.

* Mosaic, World-Wide Web, Gopher, and WAIS
A new generation of information retrieval tools exploded into great popularity on the Internet in 1993 and 1994. They are the gopher protocol, wide-area information server (WAIS) and World-Wide Web (WWW). They are indeed complete topics of discussion unto themselves which can be found, among other places, in the following newsgroups:

comp.archives
comp.infosystems.announce
comp.infosystems.gopher
comp.infosystems.wais
comp.infosystems.www

Please read those newsgroups if you have questions about the software or how to use it.

At the current rate of growth, we can never hope to list all the servers. We would like cooperation from people who assemble WWW servers to add references to other useful Ham Radio information available at other WWW, gopher, WAIS, and FTP sites. That way the FAQ can direct readers to servers that can reference more servers with more information than we can include on a periodic UseNet posting.

Some useful URLs (uniform resource locators) which can be used with WWW (Mosaic, Lynx, etc.) are as follows:

General Ham Radio Information:

Amateur Radio Virtual Library
http://buarc.bradley.edu/wwwvl-ham.html
Ham Radio FAQs & info: (The OSU server turns this into WWW hypertext)
http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/top.html

University of Buffalo's FTP server:
file://ftp.cs.buffalo.edu/pub/ham-radio
Oakland University's FTP server:
file://oak.oakland.edu/pub/hamradio

Specialized Topics:

SAREX: Shuttle Amateur Radio Experiment
http://hypatia.gsfc.nasa.gov/sarex_mainpage.html
Morse Code Demo
http://macgwy-mac2.gsfc.nasa.gov/GARC/exp/morse.html

Although still very much works-in-progress, the last two URL's
are excellent examples of WWW servers with numerous references
to other resources.

* The rec.radio.* newsgroups
The primary distribution mechanism for this FAQ is UseNet. There
are several newsgroups dealing with Amateur Radio and other aspects
of radio. The full list is as follows:

rec.radio.amateur.misc (*) Ham Radio - misc/general topics
rec.radio.amateur.antenna Ham Radio - antenna construction/theory
rec.radio.amateur.equipment Ham Radio - manufactured equipment/mods
rec.radio.amateur.digital.misc Ham Radio - digital radio modes: packet/
AMTOR/RTTY/etc (formerly r.r.a.packet)
rec.radio.amateur.homebrew Ham Radio - radio experimentation, kits
rec.radio.amateur.policy Ham Radio - policy & regulation
rec.radio.amateur.space Ham Radio - satellites, EME, shuttle/MIR
rec.radio.broadcasting public broadcast radio
rec.radio.cb Citizens' Band Radio
rec.radio.info (*) periodic info from all rec.radio groups
rec.radio.noncomm misc non-commercial radio topics
rec.radio.shortwave Shortwave Radio
rec.radio.scanner Utility Radio above 30Mhz
rec.radio.swap radio equipment wanted and for sale

Country- or region-specific newsgroups include the following:
aus.radio Australia (misc radio topics)
aus.radio.amsat Australia (amateur satellites)
aus.radio.packet Australia (packet radio)
de.comm.ham Deutschland/Germany
fj.comm.ham Japan
uk.radio.amateur United Kingdom
in.ham-radio USA, Indiana
sbay.hams USA, CA, South Bay Area/Silicon Valley
triangle.radio USA, NC, Research Triangle area

This FAQ is cross-posted to the newsgroups marked with asterisks (*).
It is also cross-posted to rec.answers (the archive for FAQs in the
rec.* newsgroups) and to news.answers (UseNet's general repository for
FAQs.) These should be the first places to look for new current
copies of the FAQ.

Most of the rec.radio newsgroups have their own FAQs as well.

* The ARRL e-mail server
ARRL is the American Radio Relay League, representing and promoting
Amateur Radio in the USA. They have established an automated file
server which responds to information requests via electronic mail.
To use the server, send mail to info@arrl.org with any number of
one-line commands in your message. Valid commands are as follows:

help sends more detailed instructions about the e-mail server
index sends a list of the files currently available
send file sends a file (replace "file" with the file's name)
several files are referenced by name in parts of this FAQ
quit ends command processing - use it if a signature will be
appended to your message

The server program will respond to the commands, each in a separate
message. Among many other informative files, a current copy of the
FAQ (updated monthly) can be obtained from the ARRL e-mail server.
Other parts of this FAQ refer to specific files on the ARRL server.

* The KA6ETB e-mail "HAM-server"
Steve Harding KA6ETB has an e-mail server on his 486 PC at home with
over 70 megabytes of Ham Radio-related files (at the time of this
writing.) You can request any of those files with an e-mail message
to the HAM-server at "ham-server@grafex.sbay.org". This site
has a mostly-different selection of files than the ARRL, though some
overlap is unavoidable. The HAM-server contains many plain-text
articles along with programs for MS-DOS & Windows, Unix, Mac, and
OS/2.

Use these commands to send requests to the KA6ETB HAM-server.
HELP instructions and info about the HAM-server
INDEX list of files available from the system
GET <file> send a file (see the HELP notes for more info on
getting binary files in uuencode or xxencode format)

NEWFILES <date> list of new files since the given date
PING used for testing your path to the HAM-server, it just
sends a simple reply so you can look at the path data
QUIT makes the HAM-server stop reading the message (so it
won't try to read your .signature)

Submissions for inclusion in the HAM-server may be mailed in UUENCODED
format to "incoming@grafex.sbay.org".

* The Internet File Transfer Protocol (FTP)
Sites connected to the Internet can access large amounts of data
almost anywhere in the world, often at high speeds. One common way
to transfer the data you want is FTP. Some sites offer a service
called "anonymous FTP" which allows remote users to access a set of
public files without requiring a password.

Perry Rovers coordinates a fairly definitive list (formerly
maintained by Tom Czarnik) of anonymous FTP sites, their IP
IP numbers, time zones, general contents, and access policies
which he posts to several newsgroups, including comp.archives,
comp.sources.wanted and news.answers. It is itself available
via anonymous FTP (how about that?? :-) from (among other places)
rtfm.mit.edu under directory /pub/usenet/news.answers/ftp-list.

For specific information about exact locations of files by name,
the Archie database server may be of help. First check if anyone has
installed the "archie" program on your machine and use it. Archie may
also be accessed by telnetting to one of many sites. The list
of archie sites is numerous and growing fast. For a current
list of sites, telnet to archie.sura.net (login "archie"), then
please use the one closest to you to conserve network bandwidth.

For those without telnet capability, the database may be accessed non-
interactively via mail server. Send E-mail with the word "help" to
archie@host where host is one of the Archie sites above.

The above two resources (the FTP list and the Archie server) are
extremely powerful tools for finding out "what's out there" at various
FTP sites around the world. *PLEASE* exhaust their capabilities
before posting requests to the net.

The following is a brief summary of major ham-related FTP sites and
places where you can obtain a current copy of this FAQ:

ftp.cs.buffalo.edu:/pub/ham-radio
(submissions to this ftp site should be made to
bowen@cs.buffalo.edu) - Contains many ham radio files,
including the FAQs, Elmer list, SWL and scanner info, Packet
FAQ, examination opportunities, information on various
regulations, information on commercial radios (i.e. GE or
Motorola), SSTV (slow-scan TV), HTs (handheld transceivers).
Recently, the rec.radio.amateur Working Group (rra-wg,
see below for more information about their mailing list)

has started to encourage archivers of radio modification
instructions to mirror them at this site. In this way,
maintainers may come and go but the collection of
mods will remain continuously available (and undergo
constant positive growth). This FAQ is updated monthly
here.
grivel.une.edu.au:/pub/ham-radio
Australian mirror of ftp.cs.buffalo.edu
nic.funet.fi:/pub/ham
This is one of the largest FTP sites in Europe and maybe the
most popular. /pub/ham/info contains a mirror of Buffalo.
Other topics available here include amiga, antenna, HF, packet,
satellite, scanners, program sources, VHF and others.
This site is also one of the article archives for the
rec.radio.info newsgroup.
ftp.uu.net:/networking/ka9q
A large FTP site in the USA - UUNET contains sources and
binaries for many different types of computers.
ftp.ucsd.edu:/ (site was down when we were looking for the new path)
The "home" site (with the most recent versions for the largest
number of different computer platforms) of the KA9Q TCP/IP
Network Operating System (NOS), other ham-related software,
and the archives for the Info-Hams, Packet-Radio, Ham-Policy,
Radio-Info and TCP-Group digests.
vixen.cso.uiuc.edu:/pub/ham-radio
This site contains the HyperCard Hamstacks written by Diana
Carlson as well as ASCII readable ham radio question pools.
ftp.apple.com:/pub/ham-radio
Ham software and information, especially Macintosh software
rtfm.mit.edu:/pub/usenet/news.answers/radio/ham-radio
all participating FAQs and periodic informational postings are
archived here, including those from the rec.radio.* newsgroups
which can be found in pub/usenet/news.answers/radio.
Participating FAQs are automatically archived here when they
are posted on UseNet.
ftp.amdahl.com:/pub/radio/amateur
cd pub/radio/amateur - the most up-to-date copy of the FAQ
(updated nightly when changes are made)
world.std.com
The Ham Radio archive at this site has been moved to
oak.oakland.edu.
oak.oakland.edu:/pub/hamradio
oak.oakland.edu:/pub/hamradio/arrl
Mac, Amiga, Atari, PC files in their own subdirectories.
Also radio mods and an Internet mirror of the ARRL info
server.

See also the file FTP-INFO on the ARRL e-mail server.

If you experience difficulty connecting to the above FTP sites, some
troubleshooting hints are shown below. The unfortunate situation here

is that Netnews is far more prevalent than direct Internet hookups, accurate name servers, smart mailers and routers, and of course, telnet and FTP client services. What this means is that your trouble may be caused by MANY factors.

Here's some hints to check what's wrong:
* It may very well be that your newsfeed and email are via dialup line and UUCP (Unix-to-Unix copy) in the wee hours of the morning. If this is the case, then you have no direct connection to the Internet and thus cannot use real-time interactive services like FTP and telnet.
* If you are at a college or university, your host (ie, the computer you are logged onto) may be on the Bitnet network, which has an email gateway to the Internet, but no direct connect capability.
* If you do have a direct connection to the Internet, does your host have telnet and/or FTP client programs? (ie, if you type "ftp" or "telnet" at your command prompt, do you get anything?) Many hosts, particularly IBM mainframes not running Unix, do not support these services!
* Can you telnet to other hosts and get a login prompt?
It may very well be that some hosts are "not recognized" due to misconfigured connections and inaccurate host tables/name servers (*.mil computers are *NOTORIOUS* for this!)
* If you get "host not in host table" or "host unknown" or similar error, try telnetting via the IP number, a set of four 1-3-digit numbers separated by periods (eg, 198.137.220.1). The exact IP number for the site can be obtained via the nslookup utility, if your computer supports it. (The FAQ does not print IP addresses any more because they change so often.) Your system may not recognize the "fully-qualified domain name" (like callsign.cs.buffalo.edu), but it should ALWAYS recognize an IP number if their network is reachable from yours.
* If you get "network unreachable" check with some more knowledgeable users if your site is actually connected to the Internet. If it is, a link in the network may be temporarily disconnected for maintenance (or by accident.)
* In the case of telnetting to a non-default port (as in the case with the callbook servers), if telnet <host> <port#> doesn't work, but you can telnet to the default login port (ie, no qualifiers), then the manner at which the port qualifier is entered may be system dependent. Also, at many education sites, it is common practice to block telnet connections above TCP socket 1000 or so in a somewhat misguided attempt to block usage of "recreational" TCP socket applications such as Multiple User Dungeons (MUD's) or Internet Relay Chat (IRC). In most cases, a polite word to the system administrators, pointing out the worthwhile services available on sockets 2000 and 3000 will get telnet service unblocked, at least for those ports.
* Syntax for telnetting from different operating systems differ. Some common command syntaxes are: (angle brackets are for

readability, do not type these in literally)
Berkeley Unix or VMS with Wollongong TCP/IP uses syntax:
telnet <host> <socket#>
Other possibilities to try:
telnet console <host> (for 2000 port)
telnet <CR> open <host>:<port#>
telnet <host>/<port#>
telnet <host>/port=<port#> (for Multinet on VMS)
* Compression techniques are different for different operating systems.
However, these hints should help:
foo.sit needs Macintosh UnStuffit to unstuff
foo.hqx needs Macintosh BinHex to uncompress
foo.tar needs Unix or GNU tar utility to extract archived files
foo.Z needs Unix 'uncompress' to uncompress or VMS
compress_vms.exe (on gatekeeper.dec.com) will work too.
foo.z needs the GNU gzip utility (from prep.ai.mit.edu) to
uncompress it. gzip will also uncompress *.Z files.
If more than one method was used,
like for foo.hqx.Z, start at the outside and work in (so uncompress
on Unix with 'uncompress' first, transfer to MacIntosh, then
uncompress with BinHex to get uncompressed file).
* There is an excellent introduction to FTP and archiving software
regularly posted to comp.binaries.ibm.pc and news.answers.
* If all else fails, ASK your system administrator or check system
documentation.

* Access to FTP archives via electronic mail
ANY BITNET, EARN, or NorthNET site can access the Princeton mail
server. It will be most efficient if you know the complete path
and filename for anything you wish to transfer, but you can use
'cd' and 'ls -l' commands to move about and browse the remote site's
directories. The Archie database server may also be useful to search
for files and their directory locations on FTP sites around the world
(see below). Please be patient when using non-interactive mail
servers such as BITFTP as each request may take several hours (or
longer) to be fulfilled.

For access to the FTP server, send email to bitftp@pucc.bitnet (for
BITNET, EARN and NorthNET users ONLY!). Subject doesn't matter.
The text of the email is the FTP commands one after another. For
example, suppose you wanted to access the FTP site lcs.mit.edu:
FTP lcs.mit.edu
USER anonymous
PASS yourname@yoursite (not required)
ASCII
CD telecom-archives
GET filenames
BYE
A help file is available giving detailed instructions by putting
the single word HELP into the text of the email.

For nonBITNET users, there is also a FTPMAIL server at
ftpmail@decwrl.dec.com. Commands include: REPLY <mailaddr>,
CONNECT [HOST [user [pass]]], ASCII, BINARY, COMPRESS, COMPACT,
UUENCODE, BTOA, LS <directory>, DIR <directory>, GET <file>, QUIT,
HELP. Get the help file for more information by sending mail with
the single line "help". The ftpmail site may complain if you try
try to get more than 1 file per email request. Here is an example of
a request:
reply your_name@your_site
connect vixen.cso.uiuc.edu
binary
uuencode
get pub/ham-radio/extra-pool.txt
quit

A note on the use of FTP mailservers: If you want to use FTP
mailservers, like FTPMAIL, please be considerate of any systems that
your mail must pass through. The quickest way to find yourself cut
off from the world is to make the admins of sites that pass your mail
pass 60Mb of X11 graphics system source. If you need large amounts
of information from a mailserver, contact your admin for help -- it
may already be available, or he may know a better way to get it.

* The UCSD Ham-Radio mail list: rec.radio.amateur.misc by mail
You can use rec.radio.amateur.misc even if your site has no NetNews
feed. To subscribe to rec.radio.amateur.misc, send email to:
Ham-Radio-Request@ucsd.edu
In the body of the message, write:
subscribe Ham-Radio
If your local e-mail software does not provide a valid return address
(i.e. Bitnet, many Milnet sites, and many non-Unix e-mail packages)
you can provide your return address between the "subscribe" and the
name of the mailing list (i.e. "subscribe myname@here.org Ham-Radio".)

Similarly, to subscribe to some other rec.radio.* newsgroups, use
the following directions: (all addresses here are @ucsd.edu)
Request address List address Newsgroup
Ham-Radio-Request Ham-Radio rec.radio.amateur.misc
Ham-Digital-Request Ham-Digital rec.radio.amateur.digital.misc
Ham-Policy-Request Ham-Policy rec.radio.amateur.policy
Ham-Equip-Request Ham-Equip rec.radio.amateur.equipment
Ham-Ant-Request Ham-Ant rec.radio.amateur.antenna
Ham-Homebrew-Policy Ham-Homebrew rec.radio.amateur.homebrew
Ham-Space-Request Ham-Space rec.radio.amateur.space
Radio-Info-Request Radio-Info rec.radio.info

IMPORTANT NETIQUETTE NOTE: never ever send a request to subscribe
or unsubscribe from *any* mail list to the list itself. Always use
the REQUEST address. Otherwise you'll end up broadcasting your
request to everyone on the list and getting lots of people angry at
you. (Seriously - this is a completely avoidable mistake and it
does irritate a lot of people.)

TO UNSUBSCRIBE, follow directions above, changing the command word "subscribe" to "unsubscribe"
DON'T POST TO THE NEWSGROUP ITSELF! USE THE REQUEST ADDRESS!
Help is available by using the command word "help". Note that command words MUST be the first word on each line of the message.

You can post to rec.radio.amateur.* by sending your posting email to the mail list addresses at ucsd.edu. Since rec.radio.info is a moderated newsgroup, requests to post to it may be sent to Radio-Info but they will be mailed to the moderator, rec-radio-info@ve6mgs.ampr.ab.ca, for posting.

All of the Amateur radio newsgroups are archived for FTP on ucsd.edu under subdirectory mailarchives/{mail-list-name}. However, Radio-Info is not archived at UCSD because almost everything is either on one of the other lists or in the news.answers archives at rtfm.mit.edu (see also funic.funet.fi above).

To subscribe to rec.radio.shortwave, send email to listserv@cuvma.columbia.edu, message is "subscribe swl-l (your name)"

* Telephone BBS's with Ham-related information
Among many, a large one is WB3FFV. Use 8/N/1. The phone numbers are
(410)-661-2475 1200-38400/MNP5/V32bis/V42bis
(410)-661-2598 1200-38400/MNP5/V32bis/V42bis/PEP
(410)-661-2648 1200-19200/MNP5/V42bis/PEP
Login is bbs, no password. This BBS is also available via UUCP, login is uucpanon, no password. For a list of available files, try:
uucp wb3ffv!~/FILES /usr/spool/uucppublic

Another one is N8EMR at phone 614-895-2553, login hbbs. Data settings are 8 bits, NO parity, 1 stop bit. N8EMR has a comprehensive list of other ham-related BBS's on-line.

ARRL has a BBS called "HIRAM", named after the League's founder. The number is 203-666-0578. More information can be obtained from the file ARRL-BBS on the ARRL e-mail server.

For a more complete list of Ham Radio BBS's, see the file BBS on the ARRL server. See also the file BBS_LIST.TXT on the KA6ETB HAM-server. Also see many of the FTP sites listed earlier in this section. There is now way to keep a list like this anywhere near up-to-date so giving you a lot of sources is the next-best thing!

* Callsign servers and geographical name servers
We know of online callsign servers for the USA, Canada and UK.

If you are at an Internet site you can connect using telnet to the following callbook server (covering the USA and Canada):
callsign.cs.buffalo.edu

There is also a general geographical name server at
martini.eecs.umich.edu

For the UK, you can use a WWW client to access the following URL:
http://www.mcc.ac.uk/htbin/callbook

The callbook server sits on port number 2000 and the geographical name server sits on port 3000. These are different port numbers than what telnet usually defaults to. So if you just telnet to these machines, you will get a login prompt instead of the server. How you tell your telnet program to connect to port 2000 or 3000 instead of the default port is operating system dependent but it is usually done with a line like

telnet callsign.cs.Buffalo.edu 2000

If this doesn't work, check the telnet/FTP troubleshooting hints above or consult your local systems guru for the proper command string.

The interactive servers are designed to be somewhat self-explanatory and they support fairly detailed help facilities. The first command you should execute when connecting to one of these servers is "info". This will list general info about that server and how to use it. You should then type "help" to list the various commands available. Typing "help" followed by a command name will give you a little more detail about that command. Servers allow searches by call, last name, zip code or city and also provide regular expression filters to trim your searches so you get a reasonable amount of output.

Both these servers are built from a database distributed by Rusty Carruth, N7IKQ. This database currently contains US and Canadian callsigns and it does not contain club calls. A new version of the database is sent around approximately once a year.

There is also an email callsign server at callbook@sat.datapoint.com (The UUCP address is ...!uunet!dptspd!callbook). In the body of the text, say "lookup" followed by callsigns you want to look up. If your mailer appends signature files, you should put a line "quit" at the end of your request (before the signature file). If you want help, put the word "help" on a line by itself. Here is what a request might look like:
help
lookup kc1sp wn4bbj
lookup n0fzd
quit

There is another email callsign server at callbook@n8emr.cmhnet.org. The subject line is the list of callsigns to lookup. All other lines are ignored. This same callsign server can be accessed with packet radio via cbook@n8jyv.#cmh.oh.usa.na. The body of the message should include "REPLY n8jyv!HOME_BBS!CALL" (where HOME_BBS is YOUR home BBS, and CALL is YOUR callsign), carriage return, "CALL call1 call2 ..." (where call1 call2 .... is space separated list of callsigns you want to lookup).

If you are a packet radio station, callserver data is available from REQQTH@WA4ONG.VA.USA.NA, subject line should be up to 5 US callsigns,

separated by spaces. For Canadian calls, use the callserver at
REQQTH@VE3JF.ON.CAN. Body of message is ignored. The server is an
OS interface to the MBL packet BBS using the Buckmaster CD-ROM
callsign database.

The FCC "call sign hotline" at 717-337-1212 is available for those
who wish to listen to the call signs allocated in each group for each
district. This requires only a touch-tone telephone to use.

* FTP access to FCC Part 97 and FCC Amateur Radio question pools
Part 97 is part of the FCC regulations and only applies to the USA.
As of 1/94, a current copy can be found at ftp.cs.buffalo.edu in
the /pub/ham-radio directory.

An ASCII copy of the question pools are available by ftp from
the ARRL e-mail server.

* Lists of radio modifications and extensions
[see also rec.radio.amateur.equipment]
The largest collection of mods data that we know about is kept at
ftp.cs.buffalo.edu in the /pub/ham-radio/mods directory. The
maintainer of this archive strongly encourages all existing
archivers of mods to mirror their collections on this site.
in this way, maintainers will come and go, but the collection
of mods will remain stable and accessible.

There is a packet radio Mods Server. To get the directories, send
a packet as follows:
SP REQFIL@N2IMC.NJ.USA.NA
Subject: MODS\Dir.1
/EX
To get the mod, send to same place, with Subject MODS\Filename.ext.

REMEMBER that any modification is likely to void your warranty and
that these mods are NOT guaranteed to work. This list is supplied
here because it is a frequently-asked question on the newsgroup.

** Can I send ARRL or W5YI electronic mail?
Several ARRL HQ staffers can be contacted via the net. Their e-mail
addresses are available from the ARRL e-mail file server in the
file called "EMAIL".

ARRL requests that you include your postal address (the slow kind) in
case they need to send you nonelectronic material in answer to your
request.

W5YI, a large VEC, can be reached at the following address:
Fred Maia, W5YI 3511297@mcimail.com

** "Why doesn't the ARRL do...?"
If you want the ARRL to do something, tell them! Direct input from a
concerned member (or, actually, any concerned Ham) carries a lot more
weight than hearsay from any source. Their e-mail addresses are

available from the ARRL e-mail file server (see above). They want direct input - that's why those addresses are available.

** What magazines are available for Ham Radio?
Your local ham store may have some, but here's some popular ones (this is NOT a complete list!):
QST, ARRL, 225 Main St, Newington, CT 06111 - basic projects and contesting
CQ The Radio Amateur's Journal, 76 North Broadway, Hicksville, NY 11801 - beginner ham radio articles
73 Amateur Radio Today, WGE Center, Forect Rd, Hancock, NH 03449, FAX (603) 525-4423, email: COMPUSERVE 70310,775 or Internet 70310.775@compuserve.com - more technical ham radio articles
QEX, ARRL, 225 Main St, Newington, CT 06111 - more technical projects
WorldRadio, 2120 28th St, Sacramento, CA 95818, (916) 457-3655. Subscriptions to 201 Lathrop Way, Ste D, Sacramento, CA 95815, (800) 365-SUBS - lots of special interest columns, like QRP, ATV, YL, etc.
W5YI Report, PO Box 565101, Dallas, TX 75356, 1-800-669-9594 - up-to-date information on Amateur Radio happenings, including VE information and statistics

** How do I use the incoming and outgoing QSL bureau?
To use the outgoing QSL bureau, you must be a member of ARRL. In general, you send a bundle of foreign (not States!) QSL cards to the outgoing bureau in Newington, Connecticut, along with a label off of your QST magazine (which shows ARRL membership), along with $2 per pound of cards (approximately 150 cards) or $1 for 10 cards or less.

To use the incoming QSL bureau, you do NOT have to be a member of ARRL. Send one or more Self-Addressed Stamped Envelopes (size 5x7 or 6x9, NO BIGGER, NO SMALLER) with one ounce of postage attached and with your callsign in 3/4" letters in top left hand corner where the return address label would go. If you expect a large quantity of foreign QSL cards, attach extra money or postage with a paper clip; do NOT affix extra postage to envelope. Send the envelopes to the QSL bureau for your callsign area. If your callsign is xx3xxx/5, you would send it to the 3rd call area, NOT the 5th call area. Addresses for QSL bureaus are listed in QST and on the ARRL e-mail server (see below); if you don't have access to a QST magazine, ask another ham. IMPORTANT: BE PATIENT! Turnaround time for a US QSL bureau, not considering foreign QSL bureaus, is about 3 months. Foreign QSL bureaus and hams can be as fast as 2 months or as slow as TEN YEARS, while average is about 6-12 months.

Addresses for the US incoming and outgoing QSL Bureaus are available from the ARRL e-mail server in the files called "QSL-IN" and "QSL-OUT". See the question above

** Are there any news groups for CAP?
There is no news group just for Civil Air Patrol discussions. However,

rec.aviation.misc is appropriate for CAP aviation discussions and for CAP radio information, these rec.radio.amateur.* groups are available. CAP-related files are also stored on the FTP site sunburn.cps.udayton.edu in pub/capital.

** What's the name of the QRP club that issues QRP numbers?
QRP Amateur Radio Club International, c/o Bill Harding K4AHK, 10923 Carters Oak Way, Burke, VA 22015.

See also the file QRP-ADDRESSES on the ARRL e-mail server.

** How do I become a 10-10 member?
10-10 is simply an organization to sponsor the use of the 10 meter band. It was first conceived when propagation was poor on 10 meters, as a method to get more hams to use 10 meters. The past few years have been great for 10 meters worldwide. However, "the bands are closing down" again, and 10 meters will once again be limited more for local communications, except for sporadic band openings, until the next sunspot cycle.

To join 10-10, work ten 10-10 members and LOG each 10-10 number, call sign, operator's name and location. Send the list to your numeric call sign or DX area manager (as shown below), with $5.00 U.S. new membership registration fee ($6.00 for foreign addresses).

10-10 International Area Managers:
USA 1 - Al Kaiser N1API, 194 Glen Hills Rd, Meriden, CT 06450
USA 2 - Larry Berger WA2SUH, 9 Nancy Blvd, Merrick, NY 11566
USA 3 - Chester Gardner N3GZE, 9028 Overhill Dr, Ellicott Cty,MD 21042
USA 4 - KY, TN, FL, VA, NC, SC only
Rick Roberts N4KCC, 7106 Ridgestone Dr,Ooltewah, TN 37363
USA 4 - GA, AL, Puerto Rico only
Jim Beswick W4YHF, 112 Owl Town Farm, Ellijay, GA 30540
USA 5 - Grace Dunlap K5MRU,* Box 445, LaFeria, TX 78559
*summer addr Jun-Oct Box 13, Rand, CO 80473
USA 6 - Dick Rauschler W6ANK, 4371 Cambria St, Fremont, CA 94538
USA 7 - Willie Madison WB7VZI, 10512 W Butler Dr, Peoria, AZ 85345
USA 8 - John Hugentober N8FU, 4441 Andreas Ave, Cincinatti, OH 45211
USA 9 - Jim Williams N9HHU, 240 Park Rd, Creve Coeur, IL 61611
USA 0 - Debbie Peterson KF0NV, RR 1 Box 35, Duncombe, IA 50532
All DX- Carol Hugentober K8DHK,4441 Andreas Ave, Cincinatti, OH 45211

For more info, see the file 10-10-INFO on the ARRL e-mail server.

** How do I join MARS?
To join MARS, you have to be 14 years or older (parental consent required under age 17), be a US citizen or resident alien, possess a valid Amateur Radio license, possess a station capable of operating on MARS HF frequencies, and be able to operate the minimum amount of time for each quarter (12 hours for Army and Air Force; 18 hours for Navy-Marines). Novices must upgrade to Technician within 6 months, else be dropped from MARS. No-Code Techs can apply, provided

they have transmit and receive HF capability for MARS frequencies (they don't need transmit capability for Amateur HF frequencies). For application forms contact:

Chief, Air Force MARS
HQ AFC4A/SYXR
203 W. Losey St. Room 1020
Scott AFB, IL 62225-5219
(618)256-5552 Fax: (618) 256-5126

Chief, US Army MARS
HQ USA Information Systems Command
ATTN: ASOP-HF
Ft. Huachuca, AZ 85613-5000
800-633-1128

Chief, Navy-Marine Corps MARS
Naval Communication Unit
Washington, DC 20397-5161

** How do I join RACES?
Contact your nearest Civil Defense or Emergency Management Agency. The Radio Amateur Civil Emergency Service is a part of a municipal, county, or state government. This does not mean, however, that every such government has a RACES program. If your government does not have a RACES, ask them to refer you to the nearest jurisdiction that does have a RACES program.

** What organizations are available to help handicapped hams?
Courage Center
Handihams
2915 Golden Valley Rd
Golden Valley, MN 55422
(612) 520-0515
ARRL has a Handihams information package (get it by requesting it through 2155052@mcimail.com) and a book called "The ARRL Plan for the Disabled", available at no charge from the ARRL Regulatory Information Branch.

** I am looking for a specific ham, can anyone help me find him?
Rather than sending out a message on Usenet, you might first try the "Radio Amateurs on Usenet" listings, maintained and posted by Mark Salyzyn VE6MGS. The articles can be found monthly on rec.radio.info and rec.radio.amateur.misc. If the copy in your news spool has expired for some reason, you can look up an entry in the list by sending an e-mail to reqnet@ve6mgs.ampr.ab.ca with either of the following commands in the body of the message:
lookup keyword keyword keyword ...
return user@machine.subdomain.domain
(Fill in the proper info for the search keyword or e-mail address.)
An automated server program will reply to your message.

If you have his/her callsign or name, you should also try one of the on-line callservers shown above. This works in most cases. (!!!)

Also try directory assistance from the phone company or the locator service provided by the Salvation Army. A Salvation Army post in your local area may be able to help you. Also, the Quarter-Century Wireless Assn maintains a collection of callbooks going back to "the beginning of time". Their address is: 1409 Cooper Drive, Irving, TX 75061. Also, the Callbook has a dial-in line for accessing new ham callsigns. Try (1-708-234-8011) at 2400 baud.

** Can I post my neat new ham related program on rec.radio.amateur.misc?
This is really not a good idea, since many of the readers receive these newsgroups as mail digests. Posting is also a one-shot thing. If you post and someone missed it, it is gone. A better way would be to announce the existence of your program here, along with information on how to obtain a copy of your program. You can also submit it to one of the FTP archive sites, which will allow the world to access it without you having to mail it to each requestor. If you just GOTTA post it somewhere, post it to more appropriate groups, like comp.sources.unix or alt.sources or comp.binaries.ibm.pc.

** Where can I get ham radio software for my computer?
See the information about Anonymous FTP, e-mail servers, and ham-related telephone BBS's above. For PC-clones, see the KA6ETB HAM-server. For Macintosh computers, see the file SOFTWARE-MAC on the ARRL e-mail server for locations to look.

** Are there Dialup News services or BBSs for Amateur Radio?
There are two major news services for ham radio. Both are run by volunteer hams and provide bulletins of specific interest to amateurs, hence they are perfectly legal to rebroadcast on ham bands according to FCC Regulation 97.111B(6). To lessen the load on the dialup lines, consider getting your local repeater operator to rebroadcast it, or tape record it to play at your favorite HF net.

RAIN (Radio Amateur Information Network) is produced by Hap Holly, KC9RP, located in Illinois. The news is typically updated 8am CST Fridays. Phone numbers are 1-708-299-INFO (299-4636) and 1-708-827-RAIN (827-7246).

NEWSLINE is another, produced by Bill Pasternak, WA6ITF. Donations for NEWSLINE are accepted at Newsline Support Fund, c/o Dr. Norm Chalfin K6PGX, Pasadena, CA 91102. Phone numbers are:
Chicago 1-708-289-0423
N.Florida 1-407-259-4479
West Palm Beach 1-407-965-1234
Los Angeles 1-805-296-2407 (Instant Update Line)
Los Angeles 1-213-462-0008
NYC 1-718-353-2801
Ohio 1-513-275-9991
Seattle 1-206-368-3969

** Where can I find VE sessions in my local area?
VE sessions are often announced in the local newspapers, but more often, they are announced by local radio bulletin boards. The local packet BBS will most likely have a monthly updated schedule for VE sessions. ARRL or W5YI can generally be called and asked for local VE sessions as well. Don't forget that you will need the following when you go in for an upgrade: a copy of your current Amateur license; your original Amateur license; any CSCEs (duplicate not required), if applicable and less than a year old; a picture ID, preferably a driver's license, passport or visa; and the VE test fee (approximately $5 right now).

Bart Jahnke, KB9NM, the ARRL VEC Manager (bjahnke@arrl.org) posts a listing of VE exams indexed by state (and some overseas sites, usually at embassies and military bases) to the net every 6 weeks or so. The same list can be obtained from the ARRL e-mail server under the file EXAM-SCHEDULE. Another file of interest is EXAM-INFO.

The ARRL list is the definitive list for ARRL VEC sessions. There are other smaller VECs around the USA. ARRL includes their schedules when the info is available. The other VECs phone numbers are listed with the ARRL info so you may wish to give them a call to check their schedule if they didn't provide it to ARRL.

** Why isn't XXX available electronically?
This is a theme for a lot of common questions. For the "XXX" above, substitute any of the following:
Callbooks
DX QSL Lists
Radio station lists
various publications
and more...

Except for the Callbook (via callsign servers), these are not available because of any of several reasons. Either there are copyright restrictions, royalty fees, or the source just may not have done the work. Also, not everyone that has information has reliable UseNet access.

** I'd like to volunteer to help ham radio through electronic information services like those mentioned in this FAQ list. Where should I start?
This FAQ would not be complete without a reminder that useful resources on the net do not grow on trees, they are the work of many dedicated volunteers. The rec.radio.amateur.* newsgroups are very fortunate to have quite a number of such volunteers providing everything from FAQ lists to telnettable callsign servers. This doesn't mean, however, that there isn't room for more information and services from additional volunteers. One such service would be more detailed FAQ lists for the recently--created special-interest rec.radio.amateur.* newsgroups (such as those for antennas, homebrew electronics, equipment and ham radio in space) to supplement this general FAQ.

Recently an electronic mailing list for amateur radio FAQ maintainers, archive custodians, service providers, and other volunteers was set up. It is the rec.radio.amateur.* Working Group (rra-wg). Anyone with a sincere interest is welcome to subscribe by sending E-mail to rra-wg-request@amdahl.com. The readers of that forum would be more than happy to provide advice and guidance with regard to an existing information project, or even suggest a new one to fill a currently-unmet need.

706. rec.radio.amateur.misc Frequently Asked Questions (Part 3 of 3)

Rec.radio.amateur.misc Frequently Asked Questions
Part 3 - Amateur Radio Advanced and Technical Questions
------------------------------------------------------------------------------

Questions discussed in Part 3: (dates indicate last modification)
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Rec.radio.amateur.misc Frequently-asked Questions------------------Part 3--

** What are the different US amateur classes and what can each of them do?
Novice - has CW (Morse code) privileges on 4 HF bands (80, 40, 15,
and 10 meter), Voice privileges on 10 meters, and privileges
on 2 VHF/UHF bands (220 MHz and 1290 MHz).
Required are 5 wpm Morse code test and 30-question Novice test.
```

Technician - has full privileges on all VHF/UHF bands above 30 MHz.
Required are Novice test and 25-question Tech test.
Technician may access Novice HF bands by passing the 5 wpm Morse
code test.
General - has all Technician privileges, plus larger access to more
HF bands, including CW and Voice on 160, 80, 40, 30, 20, 17, 15,
12, and 10 meter bands. A General class amateur can give Novice
tests.
Required are 13 wpm Morse code test, Novice, Tech and 25-question
General test.
Advanced - has all General privileges, plus wider band access on 80,
40, 20, and 15 meter bands. An Advanced class amateur can
also become a VE and give tests to Novice and Tech tests.
Required are 13 wpm Morse code test, Novice, Tech, General and
50-question Advanced test. The Advanced test is the most difficult
of the five written tests.
Amateur Extra - has full privileges on all amateur bands. An Extra
can become a VE and give all amateur tests.
Required are 20 wpm Morse code test, Novice, Tech, General,
Advanced and 40-question Extra test.

** What is the best way to learn Morse Code?
This is becoming an increasingly common question as many "no-code"
Technicians realize they can add more privileges to their license if
they learn Morse Code. The following list of suggestions should
be helpful in finding ways to approach the effort.

* Listen to code at a rate faster than you can copy.
* Participate in Novice-Roundup and/or Field Day. Practice whenever
you get the chance!
* Avoid the "deciphering" plateau around 5 WPM and and character
plateau at 10 WPM by listening to the fast Farnsworth-paced
"beat" of each letter and the "beat" of common words. (See the
question on Morse code speed for more information on Farnsworth
pacing.)
* Practice to develop a "copy buffer" so you copy about 5 characters
behind. (This is not easy but it's how the higher speeds are done.)
* Practice both with headphones and "open-air" copy as the code test
may be in either format. (If you only practice one, you may fumble
on the other.)
* Most of all, don't give up! Recognize when you reach plateaus
and keep trying until you break through them.

** What is the standard for measuring Morse code speed?
The word PARIS was chosen as the standard length for CW code speed.
Each dit counts for one count, each dash counts for three counts,
intra-character spacing is one count, inter-character spacing is three
counts and inter-word spacing is seven counts, so the word PARIS is
exactly 50 counts:

```
PPPPPPPPPPPPP AAAAA RRRRRRRRR IIIII SSSSSSSSS
. - - . . - . - . . . . . .
1 1 3 1 3 1 1 3 1 1 3 3 1 1 3 1 1 3 1 1 1 3 1 1 1 1 1 7 = 50
^ ^ ^
^Intra-character ^Inter-character Inter-word^
```

So 5 words-per-minute = 250 counts-per-minute / 50 counts-per-word or one count every 240 milliseconds. 13 words-per-minute is one count every ~92.3 milliseconds. This method of sending code is sometimes called "Slow Code", because at 5 wpm it sounds VERY SLOW.

The "Farnsworth" method is accomplished by sending the dits and dashes and intra-character spacing at a higher speed, then increasing the inter-character and inter-word spacing to slow the sending speed down to the desired speed. For example, to send at 5 wpm with 13 wpm characters in Farnsworth method, the dits and intra-character spacing would be 92.3 milliseconds, the dash would be 276.9 milliseconds, the inter-character spacing would be 1.443 seconds and inter-word spacing would be 3.367 seconds.

** What is the standard phonetic alphabet?
Though no standard phonetics are required on amateur radio, good operating procedures include using the standard phonetic alphabet to help communicate more clearly. The recommended phonetics are those also in use by aviation (internationally by ICAO treaty) and some militaries (in most English-speaking countries.)
alfa bravo charlie delta echo foxtrot golf hotel india juliet kilo lima mike november oscar papa quebec romeo sierra tango uniform victor whiskey x-ray yankee zulu

The numbers are spelled differently to suggest a particular pronunciation. Also, nine was changed to "niner" to avoid confusion with the German word "nein" for "no", though that change is not commonly used by Hams. (Usually you'll only hear "niner" from Hams who are also pilots.)
zero one two tree fower fife six seven eight niner

When first making contact with another Ham, it is a good idea to say callsigns in phonetics to give the other side a better chance of understanding them correctly.

See also: http://aviation.jsc.nasa.gov/alphabet.html

** I'm confused. What do all those abbreviations mean???
AM Amplitude Modulation
AMSAT Amateur Satellite Corporation [see rec.radio.amateur.space]
AMTOR Amateur Teleprinter Over Radio. A more sophisticated version of RTTY. Also used commercially as SITOR (Simplex Teleprinter Over Radio). [see rec.radio.amateur.digital.misc]
ARRL American Radio Relay League
ATV Amateur Television - a way to see who you're talking to!
CAP Civil Air Patrol is a volunteer organization that searches for downed aircraft and missing kids and uses frequencies just

outside of the ham bands and often uses modified Amateur radios
CB Citizen's Band radio, this is NOT part of Amateur Radio and
does not require any license to operate [see rec.radio.cb]
CQ An on-the-air request for a conversation with anyone
"dupes" A dupe sheet is a duplicate check sheet, in matrix format, used
to quickly check that you have not had a "duplicate" contact
with someone (on a specific band or mode) in a contest
Elmer An amateur radio mentor, or "Master Craftsman" to a new ham.
Could refer to anyone, regardless of age or gender.
FCC Federal Communications Commission, the "law enforcers"
FM Frequency Modulation
FieldDay A June activity to practice emergency communications for
24 hours....wives call it 'an exercise in male bonding' :-).
HF High Frequency - 3 MHz to 30 MHz
HT Handy-Talky, a shorthand for "hand held radio"
LF Low Frequency - 30 kHz to 3 MHz
MARS Military Affiliate Radio System, military affiliated Amateurs
who provide free communications for overseas GIs and other
Federal services. MARS operators are licensed under DoD
instead of FCC.
NTS National Traffic System, a way to send radiograms
OF Old Friend, or Old F#$%, used to denote an older ham
OM Old Man, refers to any ham, including female hams
packet computer bulletin boards/electronic mail via Amateur Radio
[see rec.radio.amateur.digital.misc]
PRB Private Radio Bureau, administers Amateur and CB services
QSO One of the Q signals used in Morse code to mean "conversation"
QCWA Quarter Century Wireless Association, membership means you've
been a ham for more than 25 years
RTTY Radio Teletype - older form of computer communications on HF
[see rec.radio.amateur.digital.misc]
SAREX In Amateur Radio talk, Shuttle Amateur Radio EXperiment, a
chance to talk to astronauts in space. In CAP talk, Search
and Rescue EXercise, practicing for the real thing.
[see rec.radio.amateur.space]
SK Silent Key, a nice polite way to say a ham has passed on "to
that great antenna farm in the sky"
SSB Single Side Band - need less band width than AM or FM
SSTV Slow Scan TeleVision - REALLY slow, low data rate, typically
used on the lower frequency bands
SWL shortwave listening [see rec.radio.shortwave]
UHF Ultra High Frequency - 300 MHz and above
ULF Ultra Low Frequency - 30 Hz to 300 Hz
VHF Very High Frequency - 30 MHz to 300 MHz
VLF Very Low Frequency - 300 Hz to 30 kHz, audio frequencies
WARC World Administrative Radio Conference, a summit meeting that
occurs every few years, required by international treaty to
determine how the spectrum get sliced up to all vying
communications services (last one was in 1992)
XYL eX-Young Lady, or wife

YL Young Lady, non-ham girlfriend or female ham
2m Shorthand for "2 meters" (144-147.995 MHz), which is a reference to the wavelength of a common Amateur frequency band used for local communications

** What do all those "tones" mean?
Sub-Audible Tone: A low tone that you're not supposed to be able to hear. It's used as a "PL Tone." PL is "Private Line", a trademark of Motorola for their implementation of CTCSS (Continuous Tone Coded Squelch System). Basically, the transmitter sends the signal with the Sub-Audible tone and the receiver only opens when it hears signals with that tone. Signals without the proper tone are ignored. This is useful for "closed" repeaters, or for repeaters on the same frequency that have overlapping geographic areas.
Tone encode refers to the feature of providing the tone on transmit. Tone decode refers to the feature of responding to the tone on receive. Tone squelch refers to all of the above. DTMF refers to Dual Tone Multi-Frequency, or "Touch Tone" which is a trademark of AT&T. DTSS probably means Dual Tone Squelch System and refers to the feature of providing a predefined sequence of Touch Tone digits to open the repeater for transmit. DTSS is an alternate method from CTCSS, which provides a way to use a "closed" repeater even if your radio doesn't do Sub-Audible Tones.

** Where can I learn more about Amateur Radio if I live outside the US?
First, check if there is a Ham Radio-related newsgroup specific to your country. See the country-specific newsgroups in "the rec.radio.* newsgroups" in Part II of this FAQ.

Also, write to the ARRL and ask. They can usually tell you how to get a license in your country. See also the ARRL e-mail server. (Details are in Part 2.)

If you know of any location where this information is available electronically, whether by an e-mail server, anonymous FTP, or a contact person, please mail it to us so we can include it here. Send it to hamradio-faq@amdahl.com.

** How can I get a "reciprocal license" if I am a licensed ham from another country or if I am a FCC licensed ham who wants to operate in another country (on vacation)?
Editor's note (11/92): the regulations affecting this question are being changed. Contact your local Volunteer Examiner (VE) and ask about a VE 60-day pass. More details will be included in future revisions of the FAQ.

This paragraph is soon to be obsolete:

You need to submit a FCC Form 610-A to the FCC, PO Box 1020, Gettysburg, PA 17326. They will then send you a reciprocal permit for alien amateur licensee (FCC Form 610-AL). You must be a citizen of a country with which the United States has arrangements to grant

reciprocal operating permits to visiting alien Amateur operators.

This information is still current:

For FCC licensed hams operating abroad, the following guidelines
apply:
* A reciprocal license is required in all foreign countries (that have
a reciprocal operating agreement with the US), except Canada, where
the FCC license is automatically valid.
* Send a SASE to ARRL Regulatory Information Branch, telling them
which country you are going to visit and they will send you the
info and an application form. Foreign hams can likewise request
information from their national Amateur radio society.
* Submit your application with a certified copy of your Amateur
license (ie, notarized copy), and fee if applicable (use a bank draft
of a bank that does business in that country) to the appropriate
licensing administration of the foreign country. Processing may
take 30 to 90 days.
* If less than one month, you could try sending the application and
pick up the permit upon arrival in that country.
* Most countries will not allow you to bring communications equipment
into their country without a license or permit. If you applied, but
haven't received the permit yet, show the copy and your FCC license
to the customs officer, however, the equipment may still be held at
customs until your departure.
* Be sure to use only those frequencies covered by your FCC license
which are also used in the foreign country, unless otherwise
authorized.

See also the file RECIP-OP on the ARRL e-mail server. (See Part 2.)

** My apartment or housing complex does not allow outdoor antennas, now what
do I do?
[see also rec.radio.amateur.antenna]
First of all, don't despair. Many hams have similar problems. Many
books offer advice for the growing group of hams that cannot put up
antennas. Some options are:
* Install an "invisible" antenna made of magnet wire.
* Disguise an antenna as a flag pole.
* Install an antenna in the attic.
* ASK the apartment manager. You may find they will let you put up
something as long as it "is invisible" or "doesn't disturb your
neighbors" or "doesn't attract lightning".
* Operate primarily from your car.
* If the restriction is due to local ordinance, you may have relief
via PRB-1. Meet with the local government and seek an informal
compromise. It is possible to win in court...but it's expensive and
time consuming.
* If you are restricted by "covenants" attached to the deed of your
home, your options are severely limited. Covenants are considered
to be private, voluntary contracts between individuals and are

outside of the intended application of PRB-1. In many cases, you
can petition the Homeowner's Association for an exception. Sometimes
you can win in court on the basis that other violations of the
covenants by others without action taken constitutes abandonment
of the agreement.
* For further information, contact the General Consel's office of the
ARRL, 225 Main St, Newington, CT 06111.

See also the file ANTS-INDOOR on the ARRL e-mail server.

** I got TVI...HELP!!!
Here's some hints on Television interference, but this is not a
complete list. There are also books on the subject available from
ARRL.
* If cable TV is an underground feed, look for central distribution
box. Check for a grounding rod.
* Try installing torroids on the cable TV cable close to the TV, and
maybe torroids on the AC cord as well.
* VCRs are notorious for RF leakers, try disconnecting the VCR.
* Check to see if interference is better or worse when cable is
disconnected and you use rabbit ears instead. It could be the
cable company's problem!
* Calling the cable company may get results, since they are also
responsible for RF leakage from their equipment. However, they
are very often obstinate. Good luck! Try some or all of these
suggestions before calling the cable company:
1. Log the interference, noting geographical location, frequency,
and characteristics.
2. Bring it to the cable company's attention in writing, preferably
addressed to "Chief Engineer", or "Technical Staff".
3. Don't be accusatory, instead ask for assistance in resolving
the problem. Try to work it out with someone technically
knowledgeable.
4. Do mention your "licensed radio system", but try not to be too
specific about "ham" or "CB" unless requested.
* Try moving the radio antenna further away from the TV sets. Make
sure the SWR is LOW.

See also the series of files on the ARRL e-mail server on various
aspects of electromagnetic interference. The filenames start with
"EMI-" like EMI-CATVI (cable TV), EMI-GEN (general notes on EMI),
EMI-AUDIO (interference to audio devices), etc.

** On what frequencies do JPL and GSFC retransmit the shuttle audio?
[see also rec.radio.amateur.space]
Station VHF 10m 15m 20m 40m 80m Video
WA3NAN 147.45 28.650 21.395 14.295 7.185 3.860
W6VIO 224.04 21.280 14.282 7.165
K6MF 145.585 7.165 3.840
W5RRR 146.64 28.495 21.350 14.280 7.227 3.850
W6FXN (temporarily out of service - looking for new frequency)

KA9SZX 146.88 426.25
K4GCC 146.94
WA4VME 145.17
W6TRW 145.32

All frequencies are in MHz. Use FM on VHF, USB on 10-20m, LSB on
40-80m.
WA3NAN - NASA Goddard Space Flight Center (GSFC), Greenbelt, MD
W6VIO - NASA Jet Propulsion Laboratory (JPL), Pasadena, CA
K6MF - NASA Ames Research Center (ARC), Moffett Field, CA
W5RRR - NASA Johnson Space Center, Houston, TX
W6FXN - Los Angeles, CA
KA9SZX - Champaign-Urbana, IL
K4GCC - Titusville, FL (near or at Kennedy Space Center)
WA4VME - Melbourne, FL (near or at Kennedy Space Center)
W6TRW - TRW ARC, Redondo Beach, CA (shuttle audio may be overridden
by repeater usage)

** Can I take my HT on an airplane and operate it if I get the permission
of the captain?
Technically, maybe. But don't count on it. In general, you can't use
a radio or scanner on an airline (or charter) *unless* the airline
allows it and the pilot-in-command (PIC) determines that it will not
interfere with the instruments and radios on that specific aircraft.
Very few US airlines allow passengers to use radios so be ready to
disconnect the antenna when you ask. (Don't even ask to transmit.)
For reference (in the US) the pertinent portion of the Federal Aviation
Regulations (FARs) is Part 91, paragraph 91.21.

Due to airport security, you may have a little difficulty carrying the
HT (or any electronic equipment) onto the airplane. Generally, you
can appease the security guards, simply by showing that the unit is
operational and doesn't have a bomb inside. For a radio, just turning
it on and opening the squelch satisfies them. Expect more difficulty
during periods of increased security.

On a private airplane, it is legal to operate an amateur radio if you
have the permission of the PIC. It is still possible for the radio to
interfere with the plane's navigation or communication equipment, so
be sure to ask first. Always obey the requests of the PIC. He knows
his airplane and radios better than you do.

** How do I modify my current Amateur license?
To modify your license (change of address, change of station location,
change of name, renewal, or even change of callsign), submit an FCC
Form 610 to the FCC. Forms are available from the FCC or ARRL or a
local VE session or ham radio store. Do NOT use a photocopy. Check
off the appropriate boxes, fill in the new/changed information, SIGN
THE FORM, and attach a copy of your current license (or a brief letter
of explanation for its absence, ie, "my dog ate it"). NOTE: If you
check the box to change your callsign, YOU WILL GET A NEW CALLSIGN,
even if all you wanted was to supply a new address; if you want to keep

your callsign, DON'T CHECK THAT BOX. Send the form to FCC, POB 1020, Gettysburg, PA 17326. Turnaround time (for CURRENT licensees only) is about 2-4 weeks.

ANY ham can apply for a new callsign (this is different from the past where you can only get a new callsign if you move or upgrade). You can't specify WHICH ONE you want, a new one comes from the same pool as new licensees for that class of license. The callsign is based on your mailing address. For overseas military and civilians, be sure to specify a station location that is within FCC jurisdiction.

New licenses are for 10-year terms. If you apply for renewal before its expiration date, the expired license is valid for 60 days after expiration to allow for the new license to arrive. You have up to 2 years after expiration (5 years for an old 5-year license) to renew before re-examination is required (but you can't operate with an expired license). You will lose your current callsign after 1 year after expiration if you don't renew.

For more information on FCC Form 610, see the file FCC-610-INFO on the ARRL e-mail server. (See Part 2 for details.)

** I'm confused about XXX, should I ask the FCC?
[see also rec.radio.amateur.policy]
Whatever "XXX" is in this case, the overwhelming ARRL and net opinion is a resounding "NO!", at least not as a first step. Amateurs are generally very law-abiding people and have historically written the FCC asking for clarification on some operating practice or another. This is a very dangerous practice, for several reasons.

Most amateur radio regulations (contained in Part 97) are generally very loosely-worded, so as not to restrict experimentation and new techniques. But asking the FCC for a clarification will set in motion the process of "clarifying" it for everyone (i.e. new rulemaking.)

Examples of such restrictive rulings include varying topics like when Hams can help non-profit agencies or effectively forcing packet BBS sysops to screen messages before forwarding them. They were the result of well-intentioned questions by Hams that forced the FCC to make a ruling where they previously allowed the amateur radio community to police itself.

Under all circumstances, it is better to first read the rules yourself. Then, if there's a problem, ask your national amateur radio organization (such as the ARRL in the US) which can give qualified advice about interpretation of FCC regulations. Organizations like the ARRL also have the influence to ask the FCC informally, without forcing a ruling.

Even if asking the FCC doesn't result in a restrictive ruling, it is generally a good idea to not overburden an under-staffed and under-funded government agency with a lot of correspondence. The Amateur Radio Service has traditionally been a low-workload "hands-off" service, and has enjoyed a wide latitude from the FCC. Please don't

ruin this image for your fellow amateurs.

For more discussion on how and when to contact the FCC, see the file FCC-CONTACTING on the ARRL e-mail server. (See Part 2 for details.)

** Is there any information on antique radios?
Antique radio classifieds: ARC, PO Box 802-B6, Carlisle, MA 01741 - old radios, TVs, ham equipment, 40s and 50s radios, telegraph, books, etc.
Hallicrafter Service manuals: Ardco Electronics, PO Box 95, Dept Q, Berwyn, IL 60402
Antique Wireless Association, Bruce Kelley, W2ICE, Route 3, Holcomb, NY 14469 - sponsors the Wireless Museum

** Where can I buy vacuum tubes?
Kirby, 298 West Carmel Drive, Carmel, IN 46032 (1-317-843-2212)
Antique Electronic Supply, Box 1810, Tempe, AZ 85281 (1-602-894-9503)
Fair Radio Sales, Box 1105, Lima OH 45802
Fala Electronics, Box 1376-1 Milwaukee, WI 53201
Southern Radio Supply, 1909 Tulane Ave, New Orleans, LA 70112 (10504-524-2343)

See also the file VACUUM-TUBES on the ARRL e-mail server. (See Part 2)

** What do I need to get started in packet radio?
[see also rec.radio.amateur.digital.misc]
Packet radio is a digital form of communication using radios. There are OTHER digital forms, as well, like CW, RTTY and AMTOR. To use packet radio, you'll need a radio (2 meters and 70 centimeters are most popular), a box that converts radio signals to digital signals that a computer can understand (called a TNC or terminal node controller) and a computer or terminal. For some computers or TNCs you may need special software as well. However, most TNCs and computers get along quite well with just a terminal emulator software package. Most personal computers can be interfaced to use with packet radio. Since there are many digipeaters, generally even an HT will work with packet radio.

Your first source of information on Packet Radio should be the rec.radio.amateur.digital.misc newsgroup. It has its own regularly-posted FAQ that goes into much more depth on the subject than this one can. See also the mailing list and archives info in Part 2.

For more information on packet radio, you might try TAPR (Tucson Amateur Packet Radio), PO Box 12925, Tucson, AZ 85732 (602-749-9479).

See also the files PACKET-INTRO, PACKET-NEW, and PACKET-GLOSSARY on the ARRL e-mail server or the directory /hamradio/packet on the KA6ETB e-mail HAM-server. (See Part 2.)

** What do I need to get started in satellite communications?
[see also rec.radio.amateur.space]
For more information about Amateur Satellite Communications, try

AMSAT (Radio Amateur Satellite Corporation), PO Box 27, Washington, DC 20044 (301-589-6062). They also have an international net on Sundays on 14.282 MHz at 1900Z.

ARRL publishes a book on this subject: The Satellite Experimenter's Handbook. Ham Radio stores in your area may either have it or be able to order it. Or you can order it direct from ARRL.

See also the contents of the directory /hamradio/satelite on the KA6ETB e-mail HAM-server. The ARRL e-mail server has a bibliography on satellite materials in the file SATELLITES-B.

** What is available to get started in ATV, SSTV and WEFAX?
This is a large subject area in itself. Amateur Television (ATV), Slow-scan TV (SSTV), and Weather FAX (WEFAX) all deal with transmitted pictures. (ATV includes moving pictures and audio just like your household TV.)

Equipment is available to interface to most common microcomputers including PC clones, Amigas (which are prominent in most video applications anyway), Atari ST, and others. (At last check, we didn't see Macintosh on the list.) There are also a handful of publications on the subject.

All this information is available via FTP in the /pub/ham-radio directory at ftp.cs.buffalo.edu. (See Part 2 for more information on FTP.) The file called sstv_wefax_info is maintained by John Langner WB2OSZ (johnl@avs.com).

The ARRL e-mail server contains an introduction to SSTV in the file SSTV-INFO. (See Part 2 for more information on the ARRL e-mail server.) There is a bibliography of ATV articles from QST in the file TV-B. (See Part 2 for details.)

The KA6ETB e-mail HAM-server has files on SSTV and WEFAX in the directory /hamradio/sstvfax.

Another resource is the regularly-posted UseNet Elmers Directory. The list contains a volunteer Elmer who can help with ATV, SSTV, and WEFAX questions.

** What are these contests I sometimes hear, and how do I participate?
Dozens of contests are held each year, usually at weekends, and can provide useful operating experience. They typically last for 24 or 48 hrs, and are usually on SSB or CW only (the Russian CQ-Mir contest is on both modes at the same time). You can participate by making one QSO or several thousands. In most contests you send a signal report (traditionally 59 or 599) followed by a number that is different for different contests - the most common one is a serial number (so you send 599 001 for your first QSO, then 599 002 etc). The exchange may, however, be your age (All Asian contests), your CQ or ITU zone (CQWW and IARU contests, respectively), your state (ARRL contests) or something else. Read "Contest Corral" in QST for the rules for all

major contests - the more serious contester may wish to subscribe to the National Contest Journal, or join the e-mail contest mailing group (write to Trey, WN4KKN, at garlough@tgv.com). Knowing the rules can prevent embarrassment - you will get a cool reception if you are a W or VE and call a W/VE in the ARRL contests, since they can only work non-W/VE stations. Otherwise, QSOs made in contests are just as valid for DXCC (DX Century Club - more than 100 contacts), WAS (worked all states) and other awards as are 30-minute ragchews. Although not strictly a contest, the annual Field Day provides very useful operating experience under less than optimal conditions and is highly recommended for new operators - check with your local club for their Field Day plans some weeks before the (late June) event.

For more information on contests, the ARRL e-mail server has the following files: CONTESTS-93 (as of this writing, substitute current year), CONTEST-LOGS (for contest log formats), FORM-10M (10m contest entry form), FORM-VHF (VHF contest entry form), and others.

707. Info on ICOM 2340

Newsgroup: rec.radio.amateur.misc

The Calif. DMV has a plate swap form - maybe yours has the same. If
your situation happened here in CAlif. you could get regular plates for
your car, then take both cars to the DMV and pay something like $15 and
they would exchange them in the computer. You'd swap them on the cars
and the dirty deed is all done.

Ne> building, operating, experimenting
Ne> qrp, qro...

I agree wih you here, but just as in Boy Scouts, Church groups,
etc, to become a member you must pass through an inital test or
comon bond. Morse will forever be that common bond for me, something
easy to relate to, and remove from a simple government testing process.

I have never met someone, who with a little effort and support could not
master the minimal requirements of morse.

I am in the process of building remote receivers for a cross-band linked repeater system. Can anyone point to a regulation that indicates the ID must be audible to the human ear ? I see the reg that states that speech must not impact the ability to copy, but it doesn't seem to require copy by ear (like they do for the code exams).

As a side bar, this system uses the same link freq for all remote receivers. The user will select the desired receiver via its freq and PL combination. SO the system has no voter and random IDing of links will impact performance, so the desire is to ID every transmission with a sub-audible ID.

I'll pass over whether Continous Wave equals the International Morse Code. It doesn't in a technical sense, but in the popular amateur imagination it does. However, American Morse encoding was first, though it's rarely used on the air today. Baudot encoding was also sent using on/off keying rather than FSK at first, though that isn't much used today either because FSK is better than on/off keying under noisy or fading conditions. Coherent FSK is even better, but that hasn't caught on much with amateurs yet. (All of that is still Continous Wave, of course.)

>> > * It is a unique,intimate,concise and effective communications skill still

>>
>> Unique? Well yes, in the sense that any alphabetic encoding can be considered
>> unique from any other. Otherwise you couldn't tell them apart.
>
>Unique in its ability to be sent by a person with transmitter and a switch.
>No computer, keyboard, teletype, or video terminal required. Unique in that
>it can be translated directly, without machine intervention other than the
>obvious receiver.

The same could be said for any encoding that uses a series of on/off pulses, *if sent slowly enough*. As I mentioned previously, some people can recognize Baudot characters by ear a 60 WPM, and if the speed were low enough, anyone could decode Baudot by ear with a similar amount of effort as is required to decode Morse at a similar speed. Sendng slow Baudot, or ASCII for that matter, by hand with a switch is possible. Of course, machines do it faster and better, as they do with the International Morse Code for that mattter. And indeed, voice transmission also requires simple equipment (the receiver is simpler, requiring only an envelope detector, though the transmitter is slightly more complex), and is recognizable by more people than any other method.

>> Intimate? I think sterile would be a more descriptive word,
>
>Intimate in the sense that it's within you. It's personal. YOU send. YOU
>receive. No complex processing occurs between sending key and receiving ear.

Same could be said for voice, or manually sent and received slow Baudot
or ASCII. Voice in particular could be called intimate because of the
emotional overtones it conveys, which sterile character encodings do
not. The complex processing occurs between the ear and the centers of
the brain devoted to drawing meaning out of the noises in any case,
regardless of the input forms. It's the wetware modem that holds the
most complexity, regardless of the encoding used.

>> Concise? I think not. Lets take the word "world". The smallest time unit of
>> Morse is the dit. There are 55 such elements in the word "world"
>
>Concise in its simplicity vs its utility. A radio, a key, and your hand;
>communicate with the other side of the Earth.

So do a radio and a microphone, and without the tedious wetware conditioning
required for slow International Morse decoding. In all cases, communications
requires complexity. Where to partition the complexity, in hardware or wetware,
is a choice we all make. Hardware complexity is cheaper today in time, and
often in dollars, than is wetware complexity. It's often faster and more
error free as well.

>> Effective? Well yes, but so are carrier pigeons and smoke signals. :-)
>
>Yes, effective. Some folks simply prefer things simple. Others have no choice
>- put a simple radio on the air, or go without, because nothing else is
>available where they are or with the money they can raise.

People are free to choose to make things as simple as they like of course.
But they should realize that there's more to simplicity than meets the
eye. Programming the wetware to send and receive Morse isn't simple, and
requires many man-months of effort that could be spent more profitably
elsewhere (enough more profitably in almost every case to push the
complexity off onto hardware instead).

On the issue of cheapness, nothing is cheaper than a diode envelope
detector, and almost every third world family has a shortwave receiver
employing one. A modulation form detectable by an envelope detector is
certainly the cheapest method for them. Good old AM transmitters, though
shunned now in western amateur circles, still do a fine job of covering
the third world, and are only slightly more complex than a pure carrier
source. However, most third world amateurs don't live in mud huts devoid
of any of the castoffs of modern civilization. They don't grind their
own galena or smelt their own copper. Even in the thirdest of third
world countries, teletype machines are hitting the dumps as government,
military, and commercial communications systems are upgraded. I've had
several pleasant RTTY chats with third world fellows who put their
stations together completely from surplus castoffs. It seems, however,
that most amateurs outside the US are using Kenwood/Yaesu/Icom rigs

just like we are, even those operating manual Morse.

>> While that may be acceptable to some, for some purposes, it's a less
>> effective method in general than several other modulation methods and symbol

>rig can be as much or more fun than a sophisticated digital radio
>communications system. Not to mention that begining builders need to start
>with a simple mode while learning the basics.

Well here we come to the central disagreement I suppose. Distance to
me is irrelevant except in so far as the system is sufficient to cover
the distance to the person with which I wish to exchange communications.
It's the *content* of the contact that matters to me, not the mere fact
of bridging a distance. That seems a rather pointless exercise. I know
how to cheaply blanket the planet with an RF signal detectable anywhere
on the globe, but that's not the goal of communications. The goal of
communications is, oddly enough, to *communicate* thoughts and ideas
from one person to another. I want to do that as well as possible
within the constraints of amateur radio. Morse encodings don't offer
the information density or throughput required for the types of content
exchanges I desire.

>still the most efficient. A QRP rig can be put together over a weekend, from
>scratch. Most folks couldn't easily design a RTTY terminal.

But the several man-months of effort needed to program the wetware modem
can't be done over a weekend. Devoting similar time and effort to puttting
together more competent transmission, reception, and transcoding equipment
will pay a higher dividend in content exchanged.

>know. I'm not there yet.

Yes, these glyphs are not language. They are a pictorial encoding of
language. They could encode Spanish, French, Russian, etc with equal

facility as they encode English (though I'd have to use some additional glyphs to encode some of those languages properly). The glyphs are not language in and of themselves, and the ability to form or recognize these glyphs, absent an understanding of the underlying language they are representing, does not equal the ability to convey information from one person to another who does not share that underlying language. The same is true for Morse encoding. It's not language, it's a representation of symbols which *may*, when combined, represent an underlying natural language. They can equally represent meaningless noise if no common language is shared by the Morse operators.

>> in the frequency determining part of the oscillator circuit.
>
>You forgot to add the computer.

No, I did not. A computer is not necessary to convey information by digital means, though use of one can certainly be a simplifying factor in many cases today. Silicon is cheap, iron is expensive, wetware even more so. However, there was RTTY before computers, and it can still be done that way. Baudot can even be decoded by ear if sent slowly enough, or it can be used to make marks on a moving paper strip that can then be sight read, the way Samuel Morse intended *his* code to be done. Baudot can still be sent using punched paper tape over a pattern of switches, much in the same way Samuel Morse intended Morse to be sent using a suitably notched port rule dragged across a set of contacts.

>> The receiver, however, has to be as complex as one used for other modes,
>> say, SSB or AM or FM voice. Thanks to modern solid state electronics,
>
>You forgot to subtract the computer. Oh, now you're talking about SSB or AM
>or FM voice, instead of the sophisticated digital modes that are better than
>CW.

If you insist, a computer can be used, not necessarily a multi-thousand dollar general purpose computer, however. A $5 single chip micro will suffice for any of the modern encodings at the low speeds employed at HF. A PIC processor can even directly drive a simple LCD display that can double as your receiver's frequency readout. With it's 25 MHz clock rate, it can easily handle the signals by bit banging without any special modem chip, in the same fashion as the zero crossing counting "modemless" systems do. Of course, a $12 PIC71 has A/D too, so it could easily do more sophisticated processing. With it's 1.25uS conversion time, it can handle sample rates as high as 800 kilosamples/sec. Silicon is cheap, nan-hours are expensive. Even at minimum wage, I can earn enough to obtain a competent digital decoder in a fraction of the time it would take to do the wetware programing for manual Morse decoding at a similar

throughput.

[Hammond, J., 1995, "Ham Radio Enthusiasts Gather At MPC," The Sunday Monterey County Herald, 22 JAN, p. 1A.]

HAM RADIO ENTHUSIASTS GATHER AT MPC
Judy Hammond, Herald Staff Writer

The crackle of radio transmissions filled the college center at Monterey Peninsula College yesterday as ham radio operators from all over the West Coast gathered to fine-tune their skills and compare notes.

The sixth annual Winterfest of the Naval Postgraduate School Amateur Radio Club drew about 1,000 people. They came to swap ideas, attend clinics, buy equipment and talk to colleagues.

Amateur radio operators spend a lot of their time preparing for emergencies or disasters, such as earthquakes, floods and hurricanes, said Greg Pool [WH6DT], 29, of Monterey, emergency coordinator for the Amateur Radio Emergency Service.

"We spend our time making sure we can provide a secondary communications resource" for agencies such as the county Office of Emergency Services, Red Cross and Salvation Army, Pool said.

The local group of about 60 volunteers last went into action during the recent flooding in Carmel and Carmel Valley. They also were on the job during the 1989 Loma Prieta earthquake and the fires in Pebble Beach and Oakland.

During the recent local flood, they set up their transceivers at Carmel Middle School to assist the Red Cross with communications, Pool said.

"When the Red Cross can't use the phone or a cellular phone, then they've always got us," he said. "We're a phone booth. If we're not needed, we stand by."

Referring to earthquakes, Larry Earlix [KC6JEV], 47, of Monterey, also an amateur radio operator, said "we're prepared for the big one. We spend a lot of time keeping our skills up."

Unfortunately, amateur radio operators in the United States are unable to offer much assistance in the major earthquake that hit Kobe, Japan, last week, Pool said, because the United States and Japan do not have an agreement to allow third-party communications via amateur radio.

When a disaster strikes somewhere, Earlix said, amateur radio operators follow a sequence of priorities.

First, they monitor emergency radio traffic for about a week, he said, adding that at that phase, "we only listen."

Next, they take incoming calls from amateur radio operators who have messages to pass on to friends and families.

And finally they pass on outgoing messages from people who want to know about the welfare of those in the place that has been hit by a disaster.

Ken Teunis [KK6CS], 64, of Marina has been active in the emergency work of the local amateur radio operators, but he also enjoys talking with people in far-off lands.

Teunis said he and his wife, Barbara [N6XCX], got involved about 10 years ago in order to talk with family members in Arizona. "Now," he said, "I'm involved in everything."

He has a weekly schedule to talk to missionaries on distant Pacific islands, such as New Guinea, and in several South American countries.

"They have family living nearby," Teunis said, "and we can pass messages to them."

Amateur radio operators must be licensed and they cannot take money for their services, Earlix said. The NPS club has between 150 and 200 members, most of them civilians, he said.

More information on amateur radio operator training is available by calling Rick Lagerstrom [KN6FR] at 394-2347.

[Monterey County Herald, PO Box 271, Monterey CA 93942 (408) 372-3311]

>The user will select the desired receiver via its freq and PL combination.
>SO the system has no voter and random IDing of links will impact performance,
>so the desire is to ID every transmission with a sub-audible ID.

IDing links is always a nuisance, but it has to be done. I think that
a subaudible tone ID would skirt the spirit of the regulations, if not
the letter of the law. There is another way. Use a pure keyed tone near
the upper edge of the link transmitter passband, and simply notch it out
at the central transmitter site before passing the link receiver audio
to the repeater transmitter. This gives an audible ID on the link
frequency without retransmitting it over the main repeater transmitter
where it could annoy users. Since the notch is narrow, and at the upper
edge of the passband, it'll have negligible effect on the voice signal.

Gary Coffman <gary@ke4zv.atl.ga.us> wrote:
>Well John, this requires a bit of history. At one time there were two
>permanent licenses, General and Technician.

Nice explanation, Gary! I really liked it.

However, I'd want to point out that the Extra Class license actually
pre-dates the all the other current licenses, but it was non-existant
for many, many years. So, it is both the oldest, and the second-newest
(after Technician Plus) license in use today. (Of course, priviledges
for all licenses have changed...)

Also, the Advanced Class license is as old as the General Class license,
and it has been around the entire time. Of course, it was not open to
new applicants for many years, and it had the same priviledges as the
General Class license.

Just wanted to point that out to anyone who is interested in those
little tid-bits of history...

Please use the following as a sample of a letter to be mailed to the
addressee. This letter was donated by a fellow ham to the cause.

Nagalie Salas
FCC - Complaint Information Division
1917 M Street
Washington, DC 20554

RE:Glenn Baxter- - KIMAN
Ms Salas,
I am joining thousands of other amateur radio operators by registering
this complaint against Glenn Baxter, K1MAN, of the state of Maine. Mr. Baxt
er has been interfering with on-going communications of other hams for many y
ears.
During 1994 to present time, the problem has increased to an incredibl
y high level. Mr Baxter- is flagrantly violating: Part 97.103(a) . . . . good
amateur radio practice; 97.3.01(b). . . .No frequency will be assigned for the
exclusive use of any station; 97.101(d) willfully interferring with or cause
interference to any radio communication or signal.
Mr. Baxter operates under the guise of a supposed organization called
IARN,
International Amateur Radio Network. He conducts one-way transmissions of a
taped radio show a total of 100 times per week at 45 minutes per broadcast.
He insists that he should be given a clear frequency to conduct his broadcasts
because he has "established a schedule". If there is on-going communication
on the frequency used by him, he airs his broadcasts regardless. In
addition
to the taped broadcasts, he holds a two hour live telephone call-in talk show
on Sunday nights.
Mr. Baxter has tried to register felony complaints and has
written letters of a threatening and abusive nature to hundreds of hams, the
FCC and the U.S. Attorney office in Maine. He is not using good amateur
practice, he is not entitled to a clear fruency, and he is practicing
willful interference by allowing his station to me on e air, on top of
on-going communication.
While Part 97.111(b)(6) allows one-way "Transmissions
necessary to disseminate information bulletins", there is where in Part 97
that grants a clear frequency be provided for such transmissis. No where does
Part 97 indicate that amateurs using a frequency must linquish it so that an
information bulletin or telephone call-in talk show n be aired interference
tree.
It is for these reasons of Mr Baxter's abuse of his amateur radio
license and privileges that register this formal complaint and ask that the

FCC take whatever action necessary to resolve a long time and ever increasing problem.

Sincerely,

_____ _____

_____

Thanks guys,

Don Simpson

I had a long chat about this with Doug Hall (of Doug Hall Electronic fame) a couple of years ago at the Dayton Hamvention.

His take on the link ID issue is that is really not necessary from a practical point of view. If the repeater itself properly identifies, the FCC has no problem with the rest of the system. It should be obvious what the callsign is for the links based on the repeater ID.

Just one man's opinion I guess, but he said that he got that directly from an FCC engineer.

Cross-posted to: rec.radio.amateur.misc,rec.radio.info

SB DX @ ALLBBS $OPDX.191
Ohio/Penn DX Bulletin No. 191

The Ohio/Penn Dx PacketCluster
DX Bulletin No. 191
BID: $OPDX.191
January 23, 1995
Editor Tedd Mirgliotta, KB8NW
Provided by BARF-80 BBS Cleveland, Ohio
Online at 216-237-8208 14400/9600/2400/1200/300 8/N/1

Thanks to the Northern Ohio Amateur Radio Society, Northern Ohio DX Association, Ohio/Penn PacketCluster Network, W5IJU, KF5ZC, AA8JK, NW8F, WB8LFO, NS0B, JH2PDS/1, JA6VZB, OH1KAG, ON6TT, PB0ALB, DF4RD, DK7UY and DL7VEE the DXNL for the following DX information.

40M DX ROUNDTABLE. In an effort to get some organized DX activity going, K0VVV and others are now meeting at 0600z daily on 7185 kHz and listening on 7085 kHz at the same time for DX stations outside of Region 2. The format of this group is a bit different than a "list net". DX stations will run themselves instead of having a net control feeding stations back and forth. It's been more like a "roundtable" than a "list net'. Everyone, DX and domestic, are invited to join.

4U1UN CARDS UPDATE. The backlog on 4U1, 4U47 and 4U48 cards are complete as of January 20th. The 4U49 cards are being processed and will be released as soon as all the cards are filled out (probably February 1st). If you do not have your cards by the end of February, contact Jerry, WB8LFO. The backlog on bureau cards are to follow. Just a reminder! During 1995 the United Nations will be celebrating its 50th anniversary. Throughout the year, the 4U1UN station will be signing 4U50UN during many of the major contests and various times. QSL "ONLY" to W8CZN or WB8LFO.

9M8, EAST MALAYSIA. Peter, PB0ALB, will be active from Serian in Sarawak, as 9M8PFB, January 31st to March 8th. Activity will be on 80-10 meters (no WARC and 160 meters) and SSB only. QSL via CBA.

D6, COMOROS. Wolfgang, DK7UY, will be here from February 3-24th. His callsign is unknown at this time, but he plans to be active on CW, RTTY and SSB on 80-10 meters. Wolfgang mentions that QSLs will be send out via the bureau to everyone in the log, but please note that there will be "NO" direct QSLing.

KP1, NAVASSA ISLANDS. A DXpedition is being planned to take place in late April or early May with possibly 5 operators. This will be a one

week operation with emphasis on the lower bands and some satellite activity. Operators mentioned so far are W5IJU, KB4VLO, and K0IYF. More details are forthcoming.

ON6TT ON THE ROAD AGAIN! Peter, ON6TT, has taken up a two months contract as a telecom consultant for UNHCR based in the refugee camps of Goma, Zaire. He will be replacing (his old friend) Paul, F6EXV (9Q5EXV). On his way to Africa, Peter will be active first from ITU Headquarters in Geneva as 4U1ITU. Look for him during the European evenings bewteen January 30th and February 5th. He should be active from Zaire (9Q) during the week of February 6th. His tentative callsign should be 9Q5TT. Peter will try to make some weekend trips to Rwanda (9X) and Burundi (9U), depending on available transport, time and personal security. His tentative callsign would then be 4U/ON6TT (with the necessary paperwork for DXCC approval). With time permitting, he will also try to be active in the CQWW WPX, CQWW 160 and ARRL DX Phone Contests. During Peter's stay in Africa, he will concentrate on WARC bands and lower bands, however he wants to remind everyone this is not a DXpedition, so his time on the air might be limited, but he will do his best. QSLs for this tour go to ON5NT - Ghis, CBA or bureau.

TF, ICELAND. Juha, OH1KAG, will be active as OH1KAG/TF from January 27th to February 3rd. He will be active on CW and SSB but is unsure how active he will be. His special interest on this trip will be the CQWW 160m DX Contest. QSL via OH3NE.

V3, BELIZE. Alan/NS0B and John/WC0W/V31TP will be traveling here February 15th, to be a Multi/Single entry in the ARRL CW DX Contest. V31TP will probably be the callsign used during the contest unless an arrangement can made for another callsign. There will be some activity outside the contest on CW and SSB. They leave V31-land on the 20th. QSL info will depend on what callsign they use but it will either be to WC0W or NS0B.

V6 & KC6, MICRONESIA AND BELAU. JA2NQG and friends will be active from Pohnpei, February 17-23th, as V63WW. They plan to participate in the ARRL CW DX Contest and be active on the lower bands. From February 24th to March 1st, the group will travel to Belau to be active as KC6CW and KC6WW. QSL via JA2NQG.

VK, AUSTRALIA. Steve, AA8JK, will be traveling with his wife Andrea, KB8LBQ to participate/compete in the 1995 World Police and Fire Games in Melbourne, Febraury 26-March 4th. These games are the Olympics for police and firefighters worldwide. Steve is a firefighter with the Miamisburg (south of Dayton) Fire Department. After the games, Steve and his wife will travel to Queensland (VK4) were Steve plans to be active in the 1995 ARRL International DX Phone Contest as VK4SID. Steve reports that his callsign VK4SID and his wife's call VK4JAK have been OKed by the WIA, but they have not received the paperwork as of yet. After the contest, they plan to travel to some of the Austrailian islands of Queensland for some IOTA activity. Their IOTA operations will be limited by sunshine and warm water. On or about March 12th, they will travel to Hawaii for more sun and

fun. They hope to be active from KH6-land, March 13-17th. QSL to: AA8JK, P.O. Box 273, Beavercreek, Ohio 45434-0273.

VK9C, VK9L & VK9X, COCOS KEELING, LORD HOWE AND CHRISTMAS ISLANDS. Joerg/YB6AVE/DL8WPX, Rudi/DJ5CQ, and Dietmar/DL3DXX, will be active from these islands during the month of February. Their activity will be on all bands, but they will put their emphasis on CW working Europe on the lower bands. Look for VK9XY on Christmas Island, February 2-8th and again on February 18-March 2nd. Look for VK9CR on Cocos-Keeling, February 8-18th. They will fly to VK4-land after their last Christmas Island stay and probably spend some more days on Lord Howe Island working as VK9LM. QSL via DJ5CQ, Rudi Mueller, Alter Main 23, D-96179 Ebing/Bamberg.

VP2M, MONTSERRAT. Art, WA2UJH, will operate from February 16-26th. Art will be a Single/Op entry in the ARRL DX CW Contest. Their callsign is unknown, but while there Art will operate mostly CW on 40, 80 and 160 meters including activity on the WARC bands. QSL via NW2F.

VR2/VS6 & XX9, HONG KONG AND MACAO. Leo, K8PYD, will be leaving February 1st (returning February 28th) to be active from these two areas. He starts in VR2/VS6 and then as XX9YD in Macao. Leo mentions he has no problem switching from SSB to CW (if asked) anytime while he is on the air. He also mentioned he may venture elsewhere in the Far East pending access and permission to operate.

YA, AFGHANISTAN. A station signing YA/PA3BTQ appeared Sunday morning on 14200 kHz around 1245z. Activity was for about one hour. WFWL!

ZK3, TOKELAU. "The 59 Magazine" (Japanese DX magazine) reports 5W1MM will be active from January 22-26th. No callsign was mentioned, but he will be active on all bands (especially the lower bands) and operating on all modes including RTTY. QSL via JE6IBJ.

ONLY 8 MORE DAYS LEFT TO PARTICIPATE IN THE OPDX/NODXA DX SURVEY!!!! KEEP THOSE BALLOTS COMING! Ballots for the Fourth Annual OPDX/NODXA DX Survey can be found in OPDX.184. Ballots can be sent to the following packet and online addresses listed below.

FAX YOUR DX INFORMATION NOW! Faxing is available Monday/Wednesday/Friday from 0430 to 2330z only. The number is 216-237-8208 and the FAX card is sharing the same phone line as BARF-80 BBS using a data/fax/phone switch.

Excerpts and distribution of The OPDX Bulletin are granted as long as KB8NW/OPDX/BARF80 receive credit. To contribute DX info, call BARF-80 BBS online at 216-237-8208 14400/9600/2400/1200/300 and leave a message with the Sysop or send InterNet Mail to: aq474@cleveland.freenet.edu or send BitNet Mail to: aq474%cleveland.freenet@cunyvm or send PRODIGY Mail to: DFJH48A or send a message via packet to KB8NW @ WA8BXN.OH.USA.NA

OPDX/NODXA 1994 DX Survey

THE FOURTH ANNUAL OPDX/NODXA DX SURVEY FOR 1994
Here is your chance to be counted. Deadline will be January 31, 1995,
with results in February. The questions of the survey will deal with:

1) The DXer of the year. This is a DXer who you thought was outstanding
in operating and handling the pile-ups from their DXpedition.
2) DXpedition of the Year (Group and Indivdual). Choose the best and most
well organized DXpedition that met the needs of the DX community.
3) The 30 Most Wanted Countries. Choose your 30 most wanted countries.
4) OPTION: Your personal comments about DXing in 1994.

Please use the ballot below. Votes will only be accepted in the
following format below.

```
---------------------------------------------------------------------
Your | DXer of the Year| DXpedition of the| DXpedition of the
Callsign | (Person) | Year by a person | Year by a group
and QTH | | |
---------------------------------------------------------------------
CHOOSE YOUR MOST WANTED COUNTRIES. (Please list only 30 of your most
wanted countries. List CW and SSB modes separately.
CW - AB,CD,EF
SSB - GH,IJ
---------------------------------------------------------------------
I work: [ ] only CW [ ] only SSB [ ] both CW/SSB
---------------------------------------------------------------------
Comments on DXing in 1994: (Text Any Length)
---------------------------------------------------------------------
```

Grounding your antenna isn't suggested in order to _prevent_ lightning
from striking it. When a lightning bolt strikes _anything_ near your
antenna it will induce a very high voltage surge in your antenna
(think of the lightning bolt as being a _very_powerful_ spark transmitter
and your antenna as being the unwilling receiver). Providing a low-impedance
path to ground for these induced voltages is a good idea.
Last year, a particularly strong bolt in my neighborhood actually caused one
on my kid's toy ambulances which uses I.C. circuitry to activate its siren and
voice routine. "Rescue 9-1-1 rrrrrrrrRRRRRRRRRRrrrrrrrrr!" Darn near scared
the kid to death. He was across the room at the time, and is rather scared of
thunderstorms. We were reminded of the scene in the movie "Close Encounters
of the Third Kind" where the kid's toys came alive in the alien presence.
Spooky.

>: All of his grief came from the SO. The SO (illegally) confiscated his
>: radio, harassed him, tried to have him charged. What they were

No, the radios were illegally confiscated. The federal government is
by regulation, law and case law the only level of government that can
enforce communications law. The FCC didn't confiscate the radios, the
sherrif did, having no right to do so - in other words, they stole them.
B
Furthermore, as has been quoted by me and others here, the applicable
section of part 97 of the FCC regulations allows an operator in an
emergency to use whatever means of communications are at his disposal
to request assistance. In fact, every part of the FCC regs taht I've seen
has a similar section, so they couldn't even claim he was operating
a non-type accepted commercial radio.

The FCC didn't elect to do anything to the ham, including give him a
notice of violation. The reason is, that according to FCC regulations,
common practice, and in fact case law, what he did was completely acceptable.

The resaon the ham didn't persue the amtter of the stolen radios is simple -
he couldn't afford the cost of taking the County to trial, and the
radios were replaced by a donation from other hams in the area.
.

>
>Just one man's opinion I guess, but he said that he got that directly
>from an FCC engineer.

Well that just goes to prove that FCC engineers don't always give good answers. Lets look at a hypothetical situation.

Suppose we have a 2 meter repeater with multiple 2 meter remote receivers connected by 70 cm link transmitters. Now lets further assume that one of those link transmitters has a problem. It has a mixing product in it's output stage due to the neglect to include a circulator. This mixing product falls on the input to the local police department repeater. How is the 2 meter transmitter IDing itself of any use in identifying the malfunctioning link transmitter? *It* doesn't retransmit the 2 meter machine's ID. It transmits no ID at all. Yet *it* is causing harmful interference.

All the police hear on their repeater is an occasional half of an amateur QSO, and parts of some other transmitter's signals. That could be either a commercial machine, or another amateur. They can try to nail the stations who *are* IDing, of course, but that isn't really the source of the problem. How would you like to be that *other* amateur, totally blameless, who gets a visit from the FCC, or the police, because they're hearing you on their repeater? No matter how loudly you protest your innocence, there's no evidence that a third transmitter is really to blame because it never IDs. (And if your HT is modified for out of band operation, you're going to be toast.)

I have a friend who does not have net access.
He has an IC3SR Icom handi that is 430-440 transmit with the
25-900 MHz receiver. Does anyone have the mod to make it
transmit on 440-450?
He is going to be in the states for about 6 months and then
return to Japan.
Thanks Roland

You should be suspicious. Version 1.7 is a hacked version of 1.5a. There
is not and never will be a v1.7. I suggest that you delete any and all
files you have of v1.7. Who knows what virus the hacker may have planted
in there.

Is this guy actually doing anything illegal? You may not like it, it may spoil your "traditional" net frequency, you may not like what he says, but on what grounds are "we" supposed to object to what he does, and not to what W1AW does?

I have heard his stuff a few times, I just tune right past it, the same as I do with many other things on the bands that are annoying, dumb and objectionable but still legal.

I understand that there is a world of difference between what K1MAN and W1AW are doing, but it's not clear to me whether we are supposed to be petitioning for a change to the rules, or for this operator to be banned from the air because we don't like what he is doing legally. I don't like what a lot of people do with their licenses, but they are operating legally and I don't have to listen to it, so I don't.

I think Robert wants a Teknical Standard of AX25 Protocol as
implimented in the AX25 Packet Protocol.
This 'manual' Robert, is a textfile, found in many ham-BBS, all
over the world. If that is what you want, and you are not on packet
yet, then call back, and I will see if I can locate the 'manual'
I downloaded many years ago.

From: dews@wwa.com
Message-ID: <3fusgd$jvg@sashimi.wwa.com>
Source record: 253330

I am interested in finding out if there is someone out there who can take internet email messages and pass them on
to a boat in the Caribbean on a rountine basis. I have a friend living aboard a sailboat. He has HAM radio.
I have only internet access. I can get his call sign and the shortwave frequency he is on, and when.

With all of this in hand, is there someone or some group that routinely does this sort of thing. Somewhere I can send
the email to be passed on? I would assume he doesn't get packets for a PC, it would have to be voice delivered.

Thanks in advance for whatever :)

[ANARTS - Australian National Amateur Radio Teletype Society]

ANARTS NEWS BULLETIN 842 22/1/95

The usual preliminaries and post-scripts which precede and
follow the RTTY/FEC versions of the Australian National
Amateur Radio Teleprinter Society news broadcasts, will be
included with the Packet version this week as a "one off",
in the hope that within the larger audience reached there
may be amateurs who wish to follow up a contact with the
organisation.

If only some of the hundreds of members who cut their
digital teeth on RTTY through ANARTS responded, we could be
able to provide a wider spread of items to interest others.

SUNDAY BROADCAST SCHEDULES...

Enquiries to the society should be addressed to
the Secretary A.N.A.R.T.S., PO Box 860, Crows Nest,
N.S.W. 2065, accompanied by s.a.s.e., or to VK2JPA @
VK2AAB. if you have any news or information for
inclusion in a subsequent broadcast then please send to the
Broadcast Officer, PO Box 60 Blacktown 2148 or address to
VK2JPA @ VK2AAB on 144.850 MHz. QSL cards can be obtained
by applying to the Broadcast Officer at the above
address with station identification, bulletin no., date
and the first news item or part thereof. In
Australia include s.a.s.e., if overseas include 1 IRC
for air mail.

Views expressed in this news bulletin are not necessarily
those of the Broadcast Officer, the Relay Officers, or of the
Society.

BBC AND DIGITAL AUDIO BROADCASTING

THE BBC CARRIED OUT MUCH OF THE RESEARCH AND DEVELOPMENT ON DAB, AS PART OF A CONSORTIUM THAT INCLUDES EUROPEAN ELECTRONICS COMPANIES. THE PROJECT WAS SUPPORTED FROM EUREKA, THE PAN-EUROPEAN TECHNOLOGY PROGRAMME. THE CONSORTIUM RECENTLY BEGAN SELLING MANUFACTURING LICENCES FOR DAB RECEIVERS TO JAPANESE COMPANIES SUCH AS PIONEER, AND WILL BENEFIT FROM ROYALTIES. JAPANESE MASS PRODUCTION IS EXPECTED TO DRIVE DOWN THE PRICE OF RECEIVERS.

THE BBC HAS BEEN LOBBYING THE BRITISH GOVERNMENT TO RELEASE FREQUENCIES FOR THE NEW SERVICE. LAST MONTH, TRADE AND TECHNOLOGY MINISTER PATICK MCLOUGHLIN RESPONDED WITH A 12.5 MEGAHERTZ SLICE OF THE VHF BAND FROM 217.5 TO 230 MEGAHERTZ, WHICH WAS PREVIOUSLY USED BY THE MILITARY. THIS BAND IS DIVIDED INTO SEVEN 1.75 MEGAHERTZ BLOCKS, EACH CAPABLE OF CARRYING FIVE OR SIX HIGH-QUALITY STEREO CHANNELS.

UNDER AGREEMENT BETWEEN THE BROADCASTERS BBC WILL HAVE ONE BLOCK FOR ITS NATIONAL NETWORKS AND THE RADIO AUTHORITY ANOTHER, FOR CLASSICFM, VIRGIN'S ROCK STATION AND THE PLANNED SPEECH CHANNEL. THE REMAINING BLOCKS WILL BE USED BY LOCAL AND REGIONAL SERVICES.

THE BBC PLANS TO "SIMULCAST", TRANSMITTING ITS PROGRAMMES IN THE DIGITAL FORMAT AT THE SAME TIME THEY ARE BROADCAST ON FM AND AM WAVEBANDS. THE RADIO AUTHORITY HAS TOLD COMMERCIAL RADIO STATIONS THAT THEY TOO CAN "SIMULCAST" THEIR PROGRAMES WITHOUT HAVING TO PAY EXTRA FEES TO THE AUTHORITY.

COURTESY OF VK7PU PHIL

RNARS CONTACT NUMBER de ZL2JON (John).

IF YOU NEED AN RNARS NUMBER, LOOK FOR JOHN AS ZL2RN. AT PRESENT HE IS NOT ON RTTY BUT IS HOPING.

IF YOU CANNOT FIND HIM, TRY TO CONTACT HIM AS ZL2JON ON RTTY (OFTEN ON 20M) AND SEE WHAT CAN BE ARRANGED. HE HAS THE CALL UNTIL THE END OF FEBRUARY.

FIRST ANNUAL ADRS WORLD-WIDE DIGITAL WPX CONTEST

TO BE HELD ON THE FIRST FULL WEEKEND OF FEBRUARY EACH YEAR.

STARTS - 0000 UTC SATURDAY. ENDS 2400 UTC SUNDAY 4-5 FEBRUARY 1995.

FOR SINGLE OPERATOR AND MULTI-SINGLE ONLY 30 HOURS OF THE 48 HOUR CONTEST PERIOD ARE PERMITTED. OFF PERIODS MUST BE A MINIMUM OF 60 MINUTES IN LENGTH AND BE CLEARLY MARKED IN THE LOG. MULTI-MULTI OPERATOR STATIONS MAY OPERATE THE FULL 48 HOURS.

OBJECTIVE - THE OBJECT OF THE CONTEST IS FOR AMATEURS AROUND THE WORLD TO CONTACT AS MANY AMATEURS IN OTHER PARTS OF THE WORLD AS POSSIBLE DURING THE CONTEST PERIOD USING A DIGITAL MODE. RTTY, AMTOR, PACTOR, G-TOR AND CLOVER MODES ARE ALL ENCOURAGED.

BANDS - THE 3.5, 7, 14, 21, 28 MHZ BVANDS MAY BE USED. NO WARC BANDS.

TYPES OF COMPETITION
1. SINGLE OPERATOR (HIGH POWER ALL BAND, LOW POWER ALL BAND AND A SINGLE BAND.)
A. SINGLE OPERATOR STATIONS ARE THOSE AT WHICH ONE PERSON PERFORMS ALL THE OPERATING AND LOGGING FUNCTIONS.
B. LOW POWER - SAME AS 1(A) EXCEPT THAT OUTPUT POWER SHALL NOT EXCEED 150 WATTS. STATIONS IN THIS CATEGORY WILL COMPETE WITH OTHER LOW-POWER STATIONS ONLY. (ONLY FOR AN ALL BAND ENTRY).
C. SINGLE BAND STATIONS ARE HIGH POWER ONLY (EVEN IF LOW POWER IS USED).

2. MULTI-OPERATOR (ALL BAND OPERATION ONLY) NO POWER CLASSES.
A. SINGLE TRANSMITTER - ONLY ONE TRANSMITTER AND ONE BAND PERMITTED DURING THE SAME TIME PERIOD (DEFINED AS 10 MINUTES.

B. MULTI-TRANSMITTER - NO LIMIT TO TRANSMITTERS, BUT ONLY ONE SIGNAL AND RUNNING STATION PER BAND.

NOTE - ALL TRANSMITTERS MUST BE LOCATED WITHIN A 500 METRE DIAMETER OR WITHIN PROPERTY LIMITS OF THE STATION LICENSEES ADDRESS, WHICHEVER IS GREATER. ALL ANTENNAS MUST BE PHYSICALLY CONNECTED BY WIRES TO THE TRANSMITTERS AND RECEIVERS.

DX PACKET CLUSTERS, AND DX ALERTING ASSISTANCE IS PERMITTED IN ALL CLASSES OF OPERATION.

MORE NEXT WEEK

IPS WEEKLY REPORT
---
13 JANUARY - 19 JANUARY

DATE OF ISSUE: 20 JANUARY 1994

INDICES:
DATE 13 14 15 16 17 18 19
10CM 75 77 81 83 84 87 90
A 9 2 2 15 22 19 (4 ESTIMATED)
T 28 17 42 36 21 -14 33

SOLAR ACTIVITY WAS VERY LOW 13TH-17TH JANUARY AND LOW 18TH-19TH.

THE GEOMAGNETIC FIELD AT LEARMONTH WAS QUIET TO UNSETTLED
13TH-16TH, UNSETTLED TO ACTIVE 17TH-18TH, AND QUIET ON 19TH.

IONOSPHERIC F2 CRITICAL FREQUENCIES AT SYDNEY WERE NEAR NORMAL
TO 15 PER CENT ENHANCED 13TH-16TH. ON 17TH-18TH, FREQUENCIES
WERE DEPRESSED BY UP TO 25 PER CENT DURING DAYLIGHT HOURS, AND
NEAR NORMAL TO 15 PER CENT ENHANCED DURING LOCAL NIGHT. ON
19TH, FREQUENCIES WERE ENHANCED BY 15-20 PER CENT DURING
DAYLIGHT HOURS, OTHERWISE NEAR PREDICTED MONTHLY VALUES.

FORECAST (20 JANUARY - 26 JANUARY)
SOLAR: LOW
GEOMAGNETIC: ACTIVE 20 JANUARY, THEN UNSETTLED.
IONOSPHERIC: DEPRESSED BY 15 PER CENT ON 21 JANUARY,
OTHERWISE NEAR PREDICTED MONTHLY VALUES.

COURTESY OF THE IPS RADIO AND SPACE SERVICES

NOTES OF INTEREST.

SOUTH GEORGIA, VP8. VP8SGP, WAS ACTIVE UNTIL 20TH JANUARY.
THEY WERE ON ALL BANDS, CW, SSB AND RTTY. QSL W4FRU,
INDEXA POB 5127, SUFFOLK, VA 23435

TONGA, A3. A35RK, PAUL, KK6H IS NOW ACTIVE AS A35RK AND
WILL BE UNTIL 7 FEBRUARY. QSL VIA HOME CALL.

UNITED NATIONS HQ, 4U1UN. THIS STATION WILL BE SIGNING
4U50UN, UNTIL THE END OF 1995, CELEBRATING THE 50TH.
ANNIVERSARY OF ITS ESTABLISHMENT IN 1945.

FOR NEXT WEEK'S BULLETIN, SEND YOUR BANDPASS AND NOTES OF
INTEREST TO LUCIANO, I5FLN AT ITOS.ITA.EU

REMEMBER, DX DON'T SLEEP.
GL DE BOB, WB2CJL AT W5KSI.#NOLA.LA.USA.NA

ARLD002 DX NEWS

THIS WEEK'S BULLETIN WAS MADE POSSIBLE WITH INFORMATION
PROVIDED BY FRANK, AH0W/OH2LVG, TEDD, KB8NW, THE YANKEE
CLIPPER CONTEST CLUB PACKETCLUSTER NETWORK AND THE CONTEST

CORRAL COLUMN FROM THE PAGES OF QST MAGAZINE. THANKS TO ALL.

LIBYA. EUROPEANS HAVE REPORTED HEARING A STATION SIGNING F5HV/5A OR 5A/F5HV/M ON 14120 AND 14140 KHZ. THE OPERATOR GAVE HIS NAME AS JACQUES AND SAID TO QSL VIA F5PFP. HE WAS ALSO HEARD TO SAY HE HAD NO LICENSE. NO DOCUMENTATION HAS BEEN RECEIVED BY THE DXCC DESK FOR THIS ONE.

TONGA. PAUL, KK6H, WILL BE ACTIVE AS A35RK UNTIL FEBRUARY 7, WITH MOST OPERATING ON CW BETWEEN 160 AND 30 METERS. HE WAS HEARD THIS PAST WEEK ON 40 METER CW AROUND 0700Z AND AGAIN AT 1130Z. PAUL WAS ALSO HEARD BRIEFLY ON 15 METERS. QSL VIA KK6H.

HONG KONG. MIKE, VS6WV, NOW HAS ANTENNAS UP FOR 160 AND 80 METERS. HE SUGGESTS TRYING 1829 TO 1832 AND 3506 KHZ AS THESE ARE CLEAR FREQUENCIES FOR HIM TO LISTEN ON. TRY 80 METERS FROM 1130Z ON.

EAST MALAYSIA AND NORTHERN MARIANAS. FRANK, AH0W/OH2LVG, WILL BE ACTIVE IN EARLY MARCH FROM THE NORTHERN MARIANAS/SAIPAN, INCLUDING A SINGLE-OP ENTRY IN THE ARRL SSB DX CONTEST AS AH0W. HE WILL STOP FOR A FEW DAYS ON BUSINESS IN MALAYSIA AND ACTIVATE EAST MALAYSIA, 9M8. BOTH OPERATIONS WILL CONCENTRATE ON LOW BANDS, 20 METERS AND WARC. QSL VIA KE7LZ.

GUATEMALA. JACK, KE4LWT, WILL START OPERATING SOMETIME IN LATE JANUARY OR EARLY FEBRUARY AND HOPEFULLY BE ACTIVE THROUGH THE MIDDLE OF JUNE. NO CALL SIGN HAS BEEN ISSUED YET. LISTEN FOR JACK BETWEEN 0000 AND 0600Z IN THE US NOVICE SUB-BANDS, ESPECIALLY 80 AND 40 METERS.

==========

COMING EVENTS.

February 4th-5th ADRS WW RTTY WPX CONTEST
11th-12th EA WW RTTY Contest
26th Central Coast Field Day at WYONG.

STOLEN

======

FCC rules part 97.403
Safety of life and protection of property.

No provision of these rules prevents the use by an amateur station of any
means of radiocommunication at it's disposal to provide essential
communication needs in connection with the immediate safety of human life
and immediate protection of property when normal communication systems
are not available.

I have a Catalog of Parts document for a Model 100 Teleprinter (dated 1951 with drawings from qpprox 1938). The manual was published by Western Union Telegraph Company. The drawings are very detailed and may be helpful if anyone is rebuilding one of these beauties. I will copy and ship to anyone interested for repro and shipping cost. It's about 75 pages (double sided). If interested, contact Scott at seckert@ix.netcom.com.

So before you use your HT out-of-band to call for help you'd better
make sure none of the following are nearby: pay phone, cellular phone,
CB radio, amateur repeater, amateurs monitoring a simplex frequency,
someone within shouting distance who could summon further help,
signalling mirror to signal an overhead airplane. Otherwise, no
fair grumbling if your HT gets taken away and you receive a NAL.

Sounds like a dandy project, Steve.

The part about sub-audible id'ing of link-receiver transmissions sounds like
a real neat one. Under part 97.119 (station identification), I can't seem
to find any reference which would prohibit identification using signals
which are usually considered to be filtered out by most receivers.

Also, we had discussed an idea of yours whereby line-receiver transmitters
would send post-usage identifications using only the exciter, in effect
sending an id at a power level considerably lower than the communication
took place at. Once again, I find nothing specific to prohibit this act.

Any ideas out there ?????

Hi everyone:

It has been a LOOOONG time since I used Morse code (at least 10 years).
How can I re-learn and get back to a decent level (15 to 20 WPM)? If
anyone has gone through this experience please share with me (and may be
to everyone.)

Thank you for your input.

> must not impact the ability to copy, but it doesn't seem to require copy
> by ear (like they do for the code exams).

Everyone else seems to have answered this to death- my only $0.02 is that there is no reason to make the id real easy to hear. That is- some dweebs run their "polite" Cw id's for 3-4khz deviation on the tx. Why not just drive it under 1khz- or even 500hz? That just means the rx station needs to increase audio gain to hear it- but people can talk over it w/o being bothered.

>
> As a side bar, this system uses the same link freq for all remote receivers.
> The user will select the desired receiver via its freq and PL combination.
> SO the system has no voter and random IDing of links will impact performance,
> so the desire is to ID every transmission with a sub-audible ID.
>

This is a problem- at least I see the possibility for a problem. If the satellite/link tx from one site hits its 10 minute ID timer - I assume (to meet the rules) the sucker is going to key down and spit out its/your callsign. What happens if someone is talking on one of the other satellites at that same time. With a single link frequency you get several unpleasant possibilities: A) (*best case*) the unused machine that is ID-ing is relatively weak to the hub and the hub receiver doesn't capture much of it over the stronger "used" (i.e. the one with someone talking) satellite. B) Ugly heterodyne between the two transmitters for the duration of the id/transmit time. C) the "used" site is weaker and looses the "double-battle" to the ID-ing site, Leading to the inevitable:
W0ABC:>> "Repeat that again Bob- I didn't hear ya."
W0XYZ:>> "Well I ought to be-a-hittin' the repeater. I'll kick on the 100w linear." (Causing the co-channeled repeater 120miles away more headaches :-(

So- either A) use multiple linking frequencies (yes- more hardware at the hub) of B) synchronize those transmitters (set up some automatic freq control- or buy really good crystals and hope the transmitters don't drift (hah!)).

Good Luck,

All,
I'm writing an article for CompuServe Magazine on ham
radio emergency communications.
I would like to hear from hams who have pitched in during
disaster situations.
Tell me what you've done. How it helped. How did you get
and relay information?
Finally, I would like your view on ham radio emergency
communications in this age of cellular phones and satellite
links. What can ham radio do that these technologies can't.
Be sure to include your city/state and occupation so I can
properly identify you in the article.
This is a golden opportunity for ham radio to state its
case before millions of readers worldwide. I hope you'll
help me bring the message across.

[stuff deleted]

We had the same situation here along with nearly every other repeater
in town. We not only talked to FCC engineers, but lawyers also and
the FCC just isn't strict in this case. The translation on it
basically goes something like the person who is using the link
is technically the control operator for that link and when that
person (or someone in a group) ID"s they are ID'ng the link.

They know that putting a CW ID on a link causes problems with
trying to find a way to filter it out from the main repeater
transmitting all these ID's contiuously, so that's why they
are pretty relaxed on the rules in this case (from the FCC laywers
point of view). Part 97 is vague in lots of place so that we
can do things without having too many restrictions. Also start
listening to some link frequencies and you'll find that very
very few links have any ID's on them at all. Even some of
the FCC folks up here in Detroit are hams and they use repeaters
and links all the time that don't have ID's on the links, and
they havnt fined anyone around here yet or told them to put
ID's on them.

764. Wonderful ham cottage for rent in Ireland

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-23 09:15:00 UTC
From: pve@dg13.cec.BE
Message-ID: <2F237444@smtp>
Source record: 253356

I would like to offer my cottage for rent this summer. It is located in the extreme south west of Ireland, near Cape Mizen head (on a map, opposite the Fastnet Lighthouse).

If you are looking for a great holiday this summer, want to spend it in Ireland and see how pretty Ireland is, this is a great opportunity). Read on....

========>

I have a rather remote cottage in the extreme south west of Ireland. It is situated about 5 miles east of Cape Mizen Head, and about 2 miles west of the village of Goleen, County Cork, Ireland.

I have a rhombic installed that is oriented North-west/south east. It is switchable NW/SE and is headed exactly for the center of the US. Gain on 10 is about 26db, on 20m it's about 15db (not tested but from manuals). There is also a 2 meter vertical.

The cottage has a lovely huge fireplace, 1 meter walls, seating area with satellite TV (includes CNN, TNT/Cartoon network, Sky News, Galavision (Mexican)), big kitchen with electric oven, microwave cooker, bathroom/toilet with electric shower, two bedrooms upstairs with 2 double beds and two bunk beds. It also includes storage heating. There is a phone and the neighbors take care of the house (they live about 1.5 miles away). Ireland has direct access to AT&T's, MCI's and Sprint's US based operators with a locally free number.

The house has 240V electricity, however in the shack area of the kitchen there is a 1600W 110V transformer. There is also a 20m dipole for comparative measurements and a multiband folded antenna (no tuner needed).

For visitors there are many sites to see such as dolmens, copper mines (iron age), castles, walks, fresh fish and nice shops in the nearby villages (Goleen, Crookhaven and Schull). In Schull there is also the only planetarium in Ireland.

For hams, there is excellent facilities, plus Marconi house (in Crookhaven) and nearby Mount Gabriel which has the last European radar station for transatlantic flights (it is controlled from Holland). It also retrasmits VHF air comms for Shannon, London, Brest, Scotland etc and has absolutely marvelous views (it's about 1500 feet up). About 2.5 hours by car you can go to Valentia Island (with a narrow bridge) where there is the Search and Rescue station covering the atlantic as well as the place where the first submarine cable between St Johns, NF and Europe was laid. A ham, EI5CB, is one of the officers responsible for the station.

This can be the base for a wonderful holiday. Eat fresh fish. Local lamb. Even pluck a chicken. Or hunt a rabbit (millions of them; hunting rabbits and foxes allowed year-round). Or taste the beer from one of the 6 bars (pubs) in the nearby village (has about 100 residents - mind you, one of the pubs sells shoes, the other is also the local gas station, the third is the butcher and the fourth is the general store/post office).

The cottage rents for $300/week. You need to bring radio and antenna tuner as well as P.S. (if it's not main powered). And clothes. And I suppose some money. You can fly into Shannon and drive (about 4 hours - drive on the left) or into Cork (2 hours drive).

It is available from the spring of this year. Most flights from the US permit stopovers in Shannon, so make a stop and have some ham fun this part of the pond.

Hi all,

I don't know if this could be the right place but since i'm almost desperate i'd give it a try.

As a member of a Danish TA (National guard) i need to get some durable radios with headsets (just like the movie "navy Seals").
I was wondering if anyone could provide me with some address (and hopefully fax numbers) to some companies that provide
hand-held radios !! (and i'm not looking for CB hend-helds).

Thanks in advance

Lasse

: General Class license.

: Just wanted to point that out to anyone who is interested in those
: little tid-bits of history...

The Class A license was open to new applicants, of a certain type,
in 1939. I was so anxious to be able to operate 20 and 80 phone
(the only privileges denied to Class B and C licensees) without
waiting a year that when the examiner came to town I went in for
the First Class Radiotelephone test. I then took the 13 wpm amateur
code test and flunked it. So shortly I found myself with an elegant
engraving permitting me to be in charge of the 500kW at WLW in
Cincinnati, but no ham ticket! A month later I met a girl, and a
month after that got married, and a month after that the examiner
came again. With as much code practice as you can imagine, I passed
and got my Class A Amateur Operator and Station License.
The payoff, of course, is that I never operated my own station
on 20 or 80 phone during the next 10 years!

>to everyone.)

Sounds like you were in the 15-20 WPM range 10 years ago, so getting back to that range should be relatively easy. Just get on the air and operate. You'll be shaky at first, of course, but it'll come back surprisingly quickly.

As example, I hadn't done any Morse copy in about 27 years (since my traffic net days), but I was able to solidly copy 20 WPM telemetry from a balloon payload after an initial 5 minutes of garble copy. Of course it helped that I knew what format to expect, I was never able to do 20 WPM with unknown content plain text. Anyway, the point is that once the neural pathways are burned in, they'll still work after even a long hiatus.

I might add that copying Morse has always been a form of slow torture to me, and this time was no different. The next payload will have a machine digital link.

Read his plan again. He's going to ID *every* transmission. That negates the need for a separate 10 minute ID. So there will only be one transmitter on the air and IDing at a time, the one in use. However, the possibilities for conflict you outlined could still happen for *doubles*, but that can happen without remote links too.

I still maintain that notching the ID out at the central site before transmitting the audio on the 2 meter transmitter nicely solves the problem. The only person who would hear the ID is someone listening on the *link* frequency. And they'd only be doing that if they were trying to track down a problem, so having the ID audible to them is a plus, and the reason the FCC wants transmitters IDed in the first place.

If you read two messages prior to this one you will find that there are many stations taking the low road and beginning to transmit there one way information bulletins.

I like a poem I read one time. I'm sorry but I can't recall it correctly. I will try to relay what it said to me though. If someone has it I would love to have a copy.

It has to do with the Nazi take over. It said;

They came for the
Austrians (or something like that) and I did nothing because I was not Austrian.
They came for the Blacks and I did nothing because I was not Black.
They came for the Jews and I did nothing because I was not Jewish.
They came for the French and I did nothing because I was not French.
They came for me and I looked for help but there was no one left to give it.

Please get involved and write a few letters. It's not hard.

Thank you

Jeffrey Wittich wrote:
> are there other contests commonly held at hamfests?

I haven't seen these at hamfests but they are ideas off the top of my head. You could call this a "Ham Rodeo" (pun intended). Have fun.

1. CW receiving (in head) contest: Give instructions in morse and the first to follow them is the winner. Or, using headphones, each contestant in turn listens to the morse and follows instructions, morse gets faster. Winner is one who follows the most instructions correctly. Or, morse simon says. Everyone listens to the code. They are told to "send a CQ" etc. until only one remains.

2. Coax Chaos: Given two pieces of coax with mismatched connectors and a box of various adapters, connect the two cables in the least amount of time. Time deducted for using too many adapters, Etc.

3. Antenna Build (team event?): given a box of misc components, build an antenna in 15 minutes. Deduct points for high SWR, bonus points for forward gain, etc.

4. Tower climbing: up and down a tower in least amount of time. Set up temporary 40 ft tower with guys and base screw anchor. Using safety belt ring bell at the top. Sign waiver in case of injury.

>person (or someone in a group) ID"s they are ID'ng the link.

Ok, I follow that logic, after a fashion. You, and they presumably,
are saying that whoever is using the link is a guest operator (not
just a control operator, that's different), so it's no different
in principle than if I were to borrow your HT and transmit over it
using my callsign. That would be legal if the guest operator holds
priviledges allowing such operation, and providing the guest operator
is at the *control point* of the transmitter as required by 97.109.

Unfortunately for that theory, the links are operating as part of
an automatically controlled repeater system, and the rules treat
that differently. Such a system is considered, in it's entirety,
as a single station operating under a single source of control,
and under a single license. Now 97.119 says "No station may transmit
unidentified communications or signals, or transmit as the station
callsign, any callsign not authorized to the station." Using another
station's callsign to identify the link is thus illegal.

Note that even when a repeater system is being controlled by another
amateur (who must be designated by the licensee as a control operator,

97.103b) rather than being automatically controlled, the repeater system must still ID all it's transmitters with the repeater system licensee's callsign, not the control operator's callsign. And, a licensee operating as a control operator must be at either the local or remote control point.

Since being at the link site would make the linking system moot, we must assume that the station is operating under remote control if it is not operating under automatic control, and if so, the control *cannot be exercised on 2 meters*, only on frequencies of 222 MHz or higher. Since the users of the link are transmitting on 2 meters to the remote receiver, they cannot be control operators or guest operators of either the link alone, or the repeater system in toto.

So, while individuals at the FCC may *overlook* such failures to ID with the system licensee's callsign, the licensee is nonetheless in violation of the rules as written. Since it is *not* difficult to notch out audible link IDs at the main repeater transmitting site, I'd suggest sticking with the letter of the law rather than with a verbal assurance from some FCC personnel that they will look the other way.

(Now if you got them to give a formal ruling *in writing*, that's a different story, and legally binding. I want to see such a formal ruling because it would mean I could forget about a bunch of link IDers.)

Gary

Hello Everyone,

The W8YY Winter Carnival Special Event Station is being set up for this year. As of now we are planning to operate W8YY for 24 hours straight from Thursday Feb. 2nd until Friday Feb. 3rd. The times will be from 6am Thursday to 6am Friday. The following frequencies will be used: >From 6am to 6pm Thursday, 14.255 Mhz. From 6pm to 11pm Thursday, 7.255 Mhz. From 11pm to 4am Friday, 3.805 Mhz, and the last 2 hour will be held on 7.255 Mhz again. We will also be monitoring 146.58 Mhz during the operation period. Anyone wishing to contact us via Packet can log in on 144.09 Mhz to the MTUBBS. Certificates will be awarded to all stations contacting W8YY during this period. Please send a large self addressed stamped envelope, certificate sized if you don't want any creases. The certificate is 8.5 x 11 inches.

: Thanks. Jensen KH6IFZ

I noticed the same thing also. Even the file sizes of the binaries are identical for v1.5 and 1.7. Seems a bit fishy to me. I have not noticed any differences (other than "1.7" appearing throughout) between the two versions.

rdkeys@csemail.cropsci.ncsu.edu wrote:

: Of all the various keys I have seen/used in about 30 years, the only one
: that holds a candle is a thing called the ``Swedish Key''. I have only
: seen three firsthand, one at a hamfest recently in Richmond that had a
: bent nosepiece (hence I would not even go near it), one that belongs
: to a good friend from whom I would not dicker about said piece), and
: the last one is the key from the Queen Mary (same design, but not
: same manufacturer --- the design is almost identical).

Ah ! A very very nice key. I've heard that the Swedish key is
still available new.

This is a design that seems to have been made by various people.

I have an oldish British Navy key which is recognisable by its
battleship grey pressed metal cover the shape and (almost) size of a
brick. Inside is the flexure hinge, the leaf-mounted contact and the
strange trapezoidal theme to all the supports, that I think you'll
recognise in the "Swedish"key. It has the contact cap screw brought out
as a micrometer, click-detent knob through the top of the grey cover.
I've always wondered if this was the ancestor of the Swedish key (or
could it be the other way around?). Could this be what you saw on the
Queen Mary? possibly stripped out of its case. It feels like the Swedish
key. Surplus in Britain, they sell for about #45 sterling.

I have a Welsh copy of the design, too. Nice brass, nice Ffestiniog
slate base, but they didn't include the leaf mounted contact. It doesn't
feel as nice, but it is a very fast key, the sort that runs away with
you. GW keys made it, I think they closed down several years ago.

A flexure-hinge key avoids all the precision demanded by good
bearings, and works well if you like narrow gaps, they feel unpleasently
non-linear if you open the gap wider. You could probably have fixed that
damaged one easily.

: The key I am after is/was made by a company called:
: ``Lennart Pettersson & Co., Hoverberg'' (Sweden?).
: I don't know if it has a particular model number.

I think you should be able to find one new, but I believe that the
price may hurt. The Brit Navy version is delightful, but the metal cover
produces resonant "Clank" noises from your keying. Sticking something
in the cover to deaden it is a good idea, also a lot of people strip off
the cases (hence my guess about the Queen Mary). I think the navy key
could be by Racal.

Cheers

Actually, I was thinking of the Advanced class license as it was after
WWII and the change in license classes, when the A,B,C class lisences
were scrapped and they had Advanced, General, and Conditional. I think
it was even open to new applicants for a couple of years in there (after
the change), but was then closed until incentive licensing.

Just read the "Albuquerque Journal", Jan. 23, 1995 & low and behold an article from some University Telecomm Expert saying the Internet is replacing Amateur Radio in emergency communications, siting several instances during the earthquake in Kobe. First , the landlines were down, into & out of Kobe. The Official Japanese (Radio Japan-English Broadcast) statements (paraphrased) was that this was an internal problem & they would handle the rescue efforts. Sure there were some SAR Dog Teams enroute, however, even the Internet was Kaputt, directly into the affected area. Next, with over 1.5 Million Hams in Japan, why would they need anyone's help, outside of Japan ? Health & Welfare messages are prioritized, mainly outgoing first, incoming is much later & the last thing You need is thousands of non-Japanese speaking Personal, within the affected area, because they too, could become victims. OK , You flamers, ignite Your' torches & let's see some intelligent verbage around this subject. I don't see Internet as a competitor, I see it complementing. We need to educate these People within the Media, that we all have the very same end goal. To assist , when called upon, during an emergency. hey, telephones have been around for about as long as radio, and it is not a competitor.

>signalling mirror to signal an overhead airplane. Otherwise, no
>fair grumbling if your HT gets taken away and you receive a NAL.

In the case given as an example from Southern California, I don't beleive an NAL was issued. The FCC didn't seem to have a big beef with the operator. I heard it was the Sherriff that decided the radio was to be confiscated. I myself would not be one that would surrender any of my equipment unless the local L.E. official could show what authority he was using. A badge isn't enough authority to confiscate any property without due process.

It was unfortunate that the FCC didn't seem to see fit to step in and preempt the local authorities.

: >I don't recall if the FCC stuck him with a fine or not. Anyway, he lost
: >he radio although hams in the area offered to replace the one
: >commandeered by the San Diego Sheriff.

: All of his grief came from the SO. The SO (illegally) confiscated his
: radio, harassed him, tried to have him charged. What they were . . .

His radio was legally confiscated because all commercial radios must be
type accepted. Ham radio gear is not type accepted and it is illegal
to modify an amateur radio transmitter to transmit on non-amateur
frequencies under any circumstances. The Ham was not charged with
operating illegally because of the emergency circumstances surrounding
the transmission. His radio, however, was unlawful and was therefore
confiscated.

A lousy deal, but what are you going to do. You can't fight the FEDS.
Even when you are right, remember, they are bigger than you are.

And I respond:

Not quite Cliff. While it is true that commercial radios must be type accepted,
it is NOT true that it is illegal in the U.S. to modify an amateur radio to have
the CAPABILITY to transmit on non-amateur bands. (Side note, this is not the
case in many other countries). It is illegal to use (transmit with) an amateur
radio for a class of service other than the amateur service, unless it is an
emergency covered under 97.403 i.e.:

97.403 Safety of life and protection of property. - No provision
of these rules prevents the use by an amateur station of any means
of radiocommunication at its disposal to provide essential
communication needs in connection with the immediate safety of
human life and immediate protection of property when normal
communication systems are not available.

A police department can not use modified FT-470 radios instead of type accepted
commercial radios for dispatch, even if all the department's officers are also

hams, the FT-470 is not type accepted for the commercial class of service. However, an operator using a non-type accepted radio on the poice bands in what is perceived to be a true life or property threatening emergency is permitted. The radio is not actually being used in the commercial service, it is being used in the commercial bands temporarily in the emergency.

If you can find any U.S. regulation prohibiting a licensed amateur from modifying or otherwise possessing a radio capable of transmitting outside the amateur bands, please send me the citation (code and section).

Oh, and by the way, the guy in San Diego was not fighting the feds, he was fighting the San Diego Sherrifs Office. The community and the county supervisors backed the ham.

I've got a Pro 46 scanner for sale. It's a 100 channel scanner and CAN be easily modified to recieve cellular. I'll take $150.00 for it.

I've also got an HTX-202 2 meter ham radio for sale. It works perfectly, but looks well worn. It's got 16 memories, tone squelch, tone encode, DTMF memories (four, I think), etc, etc, etc. Great rig with an amazing reciever. I'll take $130 for it.

E-mail me if you are interested in either or both.

Bob, WY7O, is right on the money, so to speak, regarding the blatant advertising efforts of Amsoft on this and other newsgroups. I requested the so-called "news letter" offered, and it's nothing more than an ad for the firm's CD-ROM. Period. And a quicky and alert eye will notice the ad is posted here, and elsewhere, just about every week. As far as I can tell, Amsoft is the only ham-related CD-ROM supplier to be acting in this way. That certainly convinced me which CD-ROM I WON'T buy.....

: 97.403 Safety of life and the protection of property.
[rest of Part 97 deleted]

If my memory serves me properly, there was an incident in North San Diego County a while back where an amateur used his (modified) radio to summon assistance by transmitting on the local police frequency in an emergency.

I seem to recall that while there was no FCC-related problem, the local sheriff's department did end up confiscating the radio under local ordinance. Regardless of what the law says, local government can and does pass RF-related laws, and does enforce them (scanner bans anyone?). Up until recently, the FCC hasn't cared about pre-empting local communications law. Perhaps this is changing under pressure from the cellular business and broadcasters...

(I also remember that the radio was eventually returned to the amatuer..)

In the Jan-Feb issue of DX magazine, which I purchased for the first time recently, I saw an ad for William Plum, 12 Glenn Road, Flemington, NJ 08822-3322. I called him at (908)788-1020 and got his catalog of DX supplies.

In a recent listing, there were some questions besides mine about DX. Some folks I talked with felt that if you sent an addressed envelope with postage on it for the country from which you want the QSL card, you had an excellent chance of getting it. Bill Plum sells stamps from various countries and air mail envelopes along with other ham supplies.

Must admit that in the magazine, I learned how to contact D3X, who is not in the callbook.

For those who have not seen it, Hambrew is an excellent magazine for those who like to home-brew equipment. Some feel that it is oriented towards QRP, but not necessarily so.

The new price is $10/yr for the U.S., $15/yr for Mexico and Canada and $21/year for international. The magazine is a quarterly.

Their phone number is (800)5-HAM-RIG and the address is P.O. Box 260083, Lakewood, CO 80226.

I am not connected with them but have every issue. When the new issue arrives, I do nothing until I have read it from cover to cover.

Just a comment: What makes him infamous? He just defended himself. I realize he was convicted of carrying an unlicensed gun, or something minor like that, but that hardly puts him in the Axe Murderer/Politician class :-)

ANYWAY, there are two Thomas Clancys in the callsign server (see below). The Maryland one makes more sense, close to Washington DC?

By the way, Thomas Clancy wrote "The Hunt for Red October", "Clear and Present Danger", and several other great novels.

I, too, saw the article in the Albuquerque Journal. It came from the Knight-Ridder News Service and probably appeared originally in the Philadelphia Inquirer. The offensive part of the quote was comparing Internet communication to Ham Radio "in the old days."

One important fact that was overlooked in the article is that health & welfare traffic into and out of Japan is prohibited. We have no third-party traffic agreement with Japan, so U.S. hams cannot handle H&W or other traffic to or from the affected area. Were that not the case, I suspect there would be quite a bit of traffic on special HF nets right now.

And, yes, with 1.5 million (or more) Japanese hams, I think that many of them probably played and are still playing an important part in emergency comms in the affected area. We will have to wait for normal communications to be restored to learn the full story, but ham radio is not just a relic from "the old days."

801. NACEC vs. Amateur Radio misinformation!

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-23 19:00:32 UTC
From: nacec@millcomm.com
Message-ID: <3g0ucg$tfh@news.millcomm.com>
Source record: 253308

DATE: January 23, 1995
TO: All Amateur Radio Operators, North America!
RE: Correction of misinformation circulating on NACEC's view
of the use of Amateur Radio in disaster and emergency operations.
==========

It was recently brought to my attention the many people were under the impression that NACEC (The North American Center For Emergency Communications, inc.) was in direct competition with the Amateur Radio Community in the area of providing emergency communications for disaster and emergency relief operations. Further more, it was brought to my attention, that information was circulating within the Amateur Radio Community that the goal of NACEC was to replace all emergency and disaster communications support currently provided by the Amateur Radio Community.

I do not know where this information got its start, but it could not be further from the truth. It is the goal of this organization to provide emergency communications support to those non-profit organizations working within a disaster area and direct support of the needs of the victims.

It is also the purpose of this organization to help insure that these organizations through out North America are aware of as many communications options as possible that will help them to complete their missions of aiding the the needs of disaster victims.

It has alwayse been our belief that the first line of emergency communications within a community is the Amateur Radio community. The reason for this is simple: The local Amateur Radio Operators living within the community can respond to emergency communications needs within minutes following a disaster. NACEC may take a day or more to bring its resources to bare and start providing communications within the disaster area.

NACEC actively promotes Amateur Radio as the first line of local emergency communication, and will continue to do so!

Even though NACEC is being developed to provide rapidly deployable commercial emergency communications systems to any point within North America, there is NO way the NACEC can respond as fast as the local Amateur Radio Community when a disaster strikes.

To the point that NACEC is out to replace the need for Amateur Radio in the area of emergency communications. This is a bunch of non-sence. Anyone that is truely familure with the amount of communications needed following a large disaster will also realize that the Amateur Radio Community CAN NOT meet the entire demand. It is NACEC's function to increase the amount of availabile emergency communications within the disaster area to more closely

match this demand.

Many of our volunteers and supporters throughout North America are from the Amateur Radio Community. NACEC is being developed for the simple purpose of reducing the amount of human suffering and death caused by the shortage of available communications following a large disaster. Since the start of this undertaking, we have turned to the Amateur Radio Community for support and to build a working partnership in completing this mutual mission. This is beacuse I believe the Amateur Radio Community can relate to and in many cases has experiaced first hand the tremendious need and importance of emergency communications following disasters. For this reason, we will continue to seek the support and partnership of the Amateur Radio Community, throughout North America.

If you have any questions regarding NACEC or would like to help, please either e-mail me at nacec.millcomm.com OR write me at NACEC, P.O. Box 23057, Minneapolis, Minnesota 55423.

Warmest Regards,
Edward E. Addy (KE0EG)
Executive Director
The North American Center for
Emergency Communications inc.

This is the same thing I've hold from several sources who claim to have
had conversations with FCC folk. I know it goes against the grain of
the current wording in Part 97, but hey, if that's what they say, then
go with it.

As a statistical point, of the 8 or so VHF and UHF voice repeater
systems that use UHF link frequencies in the Philadelphia area, only
one of them has an ID on its link transmitter.

I am not directly involved, but here at the NASA Lewis Research Center in Cleveland Ohio, we recently received the certificates for the event. With the tightning of funds at the centers, it took a long time to approve the funding. Any one working for/with the governmint will attest to this fact.

I have seen our certificate and it looks great! Approximately 500 stations worked this special event station here, and the Lewis club plans to send them out shortly. The club will eat the additional postage (this comes out of members dues). Please keep this mind when you are waiting for your certificate.

A lot of members own time went into this effort. It would have been nice to send everybody's certificate as soon as possible. The certificates should come soon!

The last few days I've finally been able to get on the
air with a 40m setup.

During the day on Saturday I was getting decent contacts.
In the evenings (0200-0400UTC) I can hear the SW broadcasters,
but my signal seems to "get lost" (no returns to CQ's)

Where is my signal going? Is 40m watlzing with the MUF (maximum
usable frequency) and not bending back? Is enough of the
broadcaster 100-500kW signal bending back to be heard, but equal
percentage of my 30 watt signal not?

wanting to learn... Cheers/73. Kevin Anderson,KB9IUA

ko4ta@mindspring.com (Don Simpson) says:

(I asked)
>> Is this guy actually doing anything illegal? You may not like
>> it, it may spoil your "traditional" net frequency, you may not
>> like what he says, but on what grounds are "we" supposed to
>> object to what he does, and not to what W1AW does?

>> I have heard his stuff a few times, I just tune right past it,
>> the same as I do with many other things on the bands that are
>> annoying, dumb and objectionable but still legal.

>It would be wonderful if we could just tune right passed it. However
>he has decided to transmit on top of us.

To put it bluntly, "so, move". There is plenty of space
on 75m. If the guy is victimizing you and follows you
so as to put his signal right on top of yours as you move,
get someone to tape this and send it to the FCC. If he
has decided that "your" frequency is "his" frequency, well,
it's "my" frequency as well, but if there is some loud-mouth
using it, I will use a different one. Most radios have
VFOs these days, and there are over half a million hams in
the US alone, so nobody can expect a "personal frequency"
any time they want to use it. As I understand it, there
is a loophole that allows W1AW and K1MAN to start up on
top of you if they have met certain conditions, which they
have.

>>If you read two messages prior to this one you will find that there are
>>many stations taking the low road and beginning to transmit there one way
>>information bulletins.

If they are following the same rules that allow W1AW and
K1MAN to do what they are doing, then they are legal, and
we can only petition the FCC to change the rules, not to
go after the people who are operating within the rules,
however much we dislike what they are actually doing.

If they are not following the rules, then of course you
should complain - as I understand it, K1MAN is operating
within the current rules, and simply asking the FCC to
get him off the air is surely not a productive approach.

>>Please get involved and write a few letters. It's not hard.

It's also not hard to give the FCC the impression that we are just complaining about something that is quite legal. As I read it, you want him off the air because you object to his doing something legal but annoying to you personally. This is probably not going to work.

>fair grumbling if your HT gets taken away and you receive a NAL.

Easy now, Jeff. First, this is a policy issue and I've directed
followups to rec.radio.amateur.policy. Second, 97.403 does not
require you to go out and buy a radio you do not have; in other
words, if you are in an emergency and all you have at your disposal
is a radio, of any kind, you may use that radio to summon help.
You are not required to use CB if you do not have a CB radio
available. You are not required to use a cellular telephone if
one is available. You are certainly not required to use a mirror
to signal aircraft.

In discussing this very issue with a PRB staffer last year (from
Washington), he said essentially the above.

Anyway, use some common sense when interpreting the law. Reading
97.403 to suggest the FCC is discouraging you from summoning help in
time of a bona-fide emergency is contrary to the wording of 97.403.

How does one authorize a call to a station? What if I say that all legally
licensed calls are authorized to use my link?

>Richard VE2OTT

There is a package called etherax25.zip that I got off of ftp.ucsd.edu, that will do ax.25 stuff on top of a packet driver, and then I can run Trumpet Winsock on top of that in Windows to give me tcp/ip and Winsock interface to Windows. I use this sometimes to connect across my ethernet interface to my DOS box which is running JNOS and my radios. Let's me do multiple connects over to JNOS and beyond.

While I was at WSU, I examined for a few weeks a radio collar that the U of I
(Moscow, ID) people were using at the time for tracking cougars in Idaho.
That might be someplace to start. The guy I borrowed it from was the
licensee of the WSU amateur radio club, but can't remember his call.
The club's call is w7yh, and I have a URL for their club if you want it.

I also know about a LARGE project in Oregon in the Starky area, where they are
automatically tracking elk movements by computer.

Good Luck,
Curt, WE7U.

817. 73?

Newsgroup: rec.radio.amateur.misc

From: morawski@starbase.azrael.mitre.org
Message-ID: <MORAWSKI.95Jan23161311@starbase.azrael.mitre.org>
Source record: 253316

73 is a "numbered radiogram". It is a shortcut used when passing message
traffic to abbreviate certain stereotypical phrases. For example,
73 = best regards,
88 = love & kisses,
61 = merry Christmas (if memory serves me)
Look in the back of any ARRL logbook for a complete listing. I would guess
there are 40 or 50 numbered radiograms there.

Why ground Towers and Buildings?
(From what was taught in grade school, so not too scientific.)

In addition to the above, grounding can reduce the chances of a direct
hit. When atmospheric charge builds up in clouds it induces an equal
and opposite charge in objects near it. So if there is +X volts on the
cloud (I know charge is measured in coulombs, but for simplicity...)
-X volts will be induced in your antenna. This results in a potential
difference of 2X volts. If 2X volts is enough to traverse the intervening
air, lightning strikes. Now if your tower is grounded, the potential
difference is reduced to X thus reducing the chances of arcing. The
idea here is to 'show' a ground rather than let lightning 'find' its
way to the ground thru your system. So if lightning still strikes, at
least part of your equipment (and you) will be saved.

This is also a reason to use metallic guy wires and metallic lines to
keep your dipole up. If there is a charge induced in the antenna, it

can arc over the insulators to the grounded support lines.

Aditya
KE6PRL.

[They tell you, in case of lightning, your car is a safe place to be.
Surely, electricity that has travelled hundreds of yards in the air
is not going to be put off by a few inches of rubber.]

821. "Subcarrier" Radio Anyone?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-23 22:10:58 UTC
From: ernie@hoqst1.ho.att.com
Message-ID: <D2vpMC.4qp@nntpa.cb.att.com>
Source record: 253224
Cross-posted to: rec.radio.shortwave,rec.radio.amateur.misc

I would appreciate any lead on what is known (at least in some circles) as "subcarrier radio." My limited understanding is this is a FM type broadcast which requires a modified FM receiver to receive. In other words, the standard AM/FM radio set would not be able to process the "subcarrier" signal. Hence the broadcasters typically sells these receivers to their listening audiences. This is typically done in non-English speaking ethnic communities, because I imagine it's much cheaper to set up these operations than with a traditional AM or FM radio station.

Any lead (i.e, FCC regulation, equipment provider, etc.) would be much appreciated. Thanks.

SB SPCL @ ARL $ARLX005
ARLX005 Balloon launch slated

ZCZC AX74
QST de W1AW
Special Bulletin 5 ARLX005
From ARRL Headquarters
Newington CT January 23, 1995
To all radio amateurs

SB SPCL ARL ARLX005
ARLX005 Balloon launch slated

On February 4, 1995, the North Texas Balloon Project, sponsored by the Lockheed Radio Club in Fort Worth, will launch its sixth high altitude balloon experiment carrying Amateur Radio.

The payload includes a variety of radios and instruments that can easily be used by any amateur with a Technician or higher class license:

A crossband FM repeater will operate 147.580 receive and 445.850 MHz transmit; flight data, including GPS position, will be transmitted by 1200 baud AFSK (packet) on 144.290 MHz; and a live, elevation-controlled, color video camera will be used with a 10-watt ATV transmitter, on 439.250 MHz.

According to Doug Howard, KG5OA, the ATV frequency is cable television channel 60, and an outdoor antenna, along with a television tuned to cable channel 60, should provide acceptable pictures.

The balloon is expected to reach 100,000 ft about two hours after launch, giving it a radio horizon of about 400 mi. The launch is scheduled for 1400 UTC; if it is delayed, the launch will be rescheduled for February 5 or the following weekends.

I would just like to say that I agree completely. I liked my first issue
so much I ordered all the back-issues.

Hambrew certainly isn't on the level of Communications Quarterly when it
comes to heavy theory and complex, advanced designs, but they do a great
job of addressing the QRP enthusiast. Constant improvements to existing
designs are presented, and new ideas are discussed for readers to
experiment with.

I have no affiliation to Hambrew magazine, other than I, too, read it
from cover to cover.

I also agree that the ARRL should not monopolize amateur frequencies.

If they want to broadcast, then they should get a regular shortwave
license like everyone else. K1MAN is only following the lead of ARRL
in exploiting a public resource for personal gain.

I've owned four of the ICW2A and still think they are a great HT.

The expanded xmit mod give you 121 to 174 and 410 to 490,
receive gives you 800 band. Has a lot of good scanning functions,
such as individual frequncy lockouts.

Minor minuses include weak audio and non-lighted keypad.

I just upgraded to Tech _PLUS_ a few weeks ago. Before I got my ticket I decided that I would not keep my nocode more than a couple of months. I felt that if I really liked radio I would take the time and commitment to learn the code. IT WAS EASY. It took me about two weeks. I can now easily copy around 10 WPM. I think the FCC should change the licensing procedure to only allow people to stay a NO-CODE for a year. And then upgrade to TECH-PLUS or GENERAL. I believe the novice licensing procedure used to be similar.

: the FCC just isn't strict in this case. The translation on it
: basically goes something like the person who is using the link
: is technically the control operator for that link and when that
: person (or someone in a group) ID"s they are ID'ng the link.

Yikes. I'm not real happy with the idea that when I talk through a repeater, I might be considered the control operator, but I might be able to accept that, since I'm consciously bringing up the repeater. But I _really_ have a problem with being considered the control operator of the link on a remote receiver which I don't even know exists. This just doesn't wash.

Seems like Gary's suggestion of notching out the ID is an excellent one. With a high pitch, the CW will be a very narrow percentage bandwidth, especially if it's properly shaped, and an extremely narrow filter will wipe it out cleanly and quite inaudibly. I'd suggest somewhere between 2.5 and 3.0 kHz.

Another possibility if you can make the system smart enough is just let the remote receivers id the whole system: have them id the same way and at the same time as the repeater would, if the input signal was coming through the local receiver at the repeater site, and suppress the repeater id so long as an id is coming through a remote link.

But in any event, please do put an obvious ID onto the link. I've come across some links around here that don't ID and sound for all the world like simplex conversations. People seem to get either puzzled or upset when I break into such converstions on the link frequency...

>Don Simpson
>

First, I do not believe that petitions for FCC to come to our rescue are the correct response to a problem like this. There is an army of Official Observers out there to collect evidence of wrongdoing like this. They are effective, and my experience is that documentation of real wrongdoing [broadcasting, interference] from OOs trained to do it right will go much further than spamming the FCC with "astro turf" [artificially solicited grass-roots public comments] demanding that they deal with the problem.

Regarding letters to Congress--is this petty squabbling the way we really want to present the hobby to members of Congress???!? I think not. It bloodies ones nose to spite the face. The Congressman you write may well remember the whining and

bickering he sees in such a letter rather than the public service performed during a local emergency. When my kids come wallering to me with "he took my ball" kind of arguments, I get pissed because I have to be involved at all. Such is likely to be your favorite Congressman's reaction.

Finally, before you decide to go ahead and take Don up on his plea, take the time to hear this alleged abuse for yourself--many people jump into such activistic causes only to find that the guy pleading for your action is really grinding another axe, trying to get even 'cause the other guy's Johnny knocked up his little Betty or something similar. I don't know if Don has a legitimate gripe or not--I don't know him from Adam, and am not about to go off spamming the Commission just 'cause he says I should!

Use the ARRL and the OO system. Don't knee-jerk and go off half-cocked.

I forwarded this to the FCC so they'd get an idea of what caused the sudden
inrush of "astro turf" [solicited artificial grass-roots public comment]
Who is this high-ranking FCC official?

>Now is the time to move. We need everyone's help. We can squash this guy
>like a pesky mosquito if everyone will take 10 minutes and write three
>letters. One letter should go to your congresman. One letter to your
>senator. Finally send a letter to the FCC requesting a ruling on the matter.

There's a proper way to deal with illegal operations like willful interference
and broadcasting. Call your ARRL section manager and get the official observer
hordes to start monitoring. They are trained to document such things and are
a lot more likely to get results than spamming the FCC with complaints.

>Please I ask you. Sit down and write your congressmen, senator and
>the FCC.
>
>Sincerely,
>
>Don Simpson
>

Please, I ask you--take the time to monitor and find out what's really going on.
Don't complain just because Don says you should--I don't know him from Adam and
am not about to write the FCC or Congress just because he says I should. Also,
I don't think your Congressman or Senator really wants to get involved in a petty
squabble like this. I don't want this sort of bickering to be how they remember
ham radio when spectrum allocation issues come up before them--do you?

You need an FCC Form 610. Available from the FCC, the ARRL or for a
self-addressed stamped envelope and a scrap of paper telling us what
you want, from The Space Coast Amateur Technical Group. (use my
callbook address to do that).

you fill out section 1 of the 610 indicating you want to change your
address, attach a copy of your current license and send it in.

what could be easier..?

(by the way, if you get a form 610 that has a bunch of boxes at the top
for things like date of CSCE or similar, that's an old form and is no
longer being accepted...the new forms start off with section I at the
top, have the VE sign off blocks at the bottom and the medical waiver
on the back.)

73 is a "numbered radiogram". It is a shortcut used when passing message
traffic to abbreviate certain stereotypical phrases. For example,
73 = best regards,
88 = love & kisses,
61 = merry Christmas (if memory serves me)
Look in the back of any ARRL logbook for a complete listing. I would guess
there are 40 or 50 numbered radiograms there.

Gary Coffman (gary@ke4zv.atl.ga.us) wrote:
: Ok, I follow that logic, after a fashion. You, and they presumably,
: are saying that whoever is using the link is a guest operator (not
: just a control operator, that's different), so it's no different
: in principle than if I were to borrow your HT and transmit over it
: using my callsign. That would be legal if the guest operator holds
: priviledges allowing such operation, and providing the guest operator
: is at the *control point* of the transmitter as required by 97.109.

: Unfortunately for that theory, the links are operating as part of
: an automatically controlled repeater system, and the rules treat
: that differently. Such a system is considered, in it's entirety,
: as a single station operating under a single source of control,
: and under a single license.

Where does it say that in the rules? It sounds purely like a personal translation that every radio involved in a repeater system is part of the repeater. That would also mean that someone who sets up a crossband repeater between a simplex and repeater frequency would become an entity of that repeater system if the rules were written as you state and it would require an ID of the repeater system.

Most people are just used to thinking of the repeater system as a whole, but the FCC doesn't think that way when you give them a call and ask them. Each link is considered a different station and not treated as a whole system. This is the same sitiuation in packet where someone has a system at home and one at a remote somewhere that is linked to their own system. Each one is a seperate system and not treated as a whole. When a user transmits they are the one that is controlling the remote link transmitter to be enabled. By not transmitting the link is shut off. The rules are very simple to accomodate situations such as this. Ask an FCC lawyer rather than try to translate it personally and state it as a rule. That's what we did when we were putting up 4 remote links to solve our problem of whether or not an ID is required.

On a different note, have you tried the idea of filtering out an ID at the main site if you do ID at a higher audio frequency? Just wondering how it would really work (sounds good, but things never seem to be easy to get working :-) If in doubt as to the rules you can always ID to be on the safe side just in case they a new lawyer comes in who translates it differently. I'd like to know of a decent way too.

>ham radio is not just a relic from "the old days."

A bit off the subject, but ABC (I think) ran a story this evening on the national news about the relief effort (or lack of it...) in Japan. It seems that they have a horrible problem with red tape. Soldiers digging for hours for bodies, and when they find one they have to wait until the police arrive because they aren't allowed to move them without a police officer present... Search and Rescue teams from other countries detained for days to fill out paper work, and then they are thrown out in the streets without so much as a guide or translator... A dozen police officers directing traffic at a corner where the traffic light was repaired because no one at the scene had the authority to decide they weren't needed anymore...

Seems that the hams in Japan could be having a *lot* more difficulty in helping out in this type of situation than we do here in the US. (For those of us in the US...)

There used to be a bunch more. For instance, anyone familiar with
journalism should know that at the end of an article, the author will
put a

- 30 -

or something like that to signal the end of the article. This comes
from the same thing, back in the days when stories were sent along the
telegraph line. In American morse (the original morse) code, 3 was
...-. and 0 was _ (a long dash, longer than a normal dash today).
Running these two together (and shortening the last dash) you get
...-.- the familiar SK (or VA if you're in the Coast Guard...).

And now you know the rest of the story...

:-)

license over the last 25 years or so. but it's imprecise and does not
represent the actual names specified in the rules...bad habits are hard
to break, i guess).)

>pass this will be my first HAM radio liscense. I am confused about a couple

ham or Ham but not usually HAM...and as we say, fine business for coming
aboard. you've hit on a big thing -- not everything you need to know is
in the study guide...the amateur radio service is a big place...

>of things that are not explained in the books; is the order from least
>privaleges to most novice, technician, etc... For tech class I need to know
>novice and tech stuff correct? I guess I am just confused about why is Tech
>higher than Novice if it is possible to get tech without code? If any of
>this makes any sense please e-mail me or post some answers. Thanks

there are now 6 classes of US amateur radio licenses.

Novice 5 wpm code and element 2 written
Technician element 2 and 3A written
Technician Plus 5 wpm code and element 2 and 3A written
General 13 wpm code, elements 2, 3A, 3B.
Advanced 13 wpm code, elements 2, 3A, 3B, 4A.
Amateur Extra 20 wpm code, elements 2, 3A, 3B, 4A, 4B.

The novice licensee can only operate on small portions of 6 bands.
The tech can operate on all amateur bands above 30 MHz.
(just like an Extra - for all intents and purposes, the Tech is an Extra
when it comes to privileges for earth bound hams (and waivers are easily
gotten for the space bound...) above 30 MHz...that's why the Tech is
higher than a Novice but lower than the Tech Plus since it permits
some HF operation.

>fair grumbling if your HT gets taken away and you receive a NAL.

If a ham had the ability to summon appropriate aid via his modified
ht, and didn't, he would be, in MHO, a cad, and if I was the injured
party, I'd have words with him.

You example about other means is reducto ad absurdum. A simple look
around, or knowledge that he was out of repeater range (i.e. in the
wildernesss, or even rural areas) would suffice any rational test. Like
most hams, though, you've created a scenario that is bound to fail your
test. It's not a requirement to try every repeater pair, every simplex
freq, etc. It's a requirement (under the save life and limb rule) to
get help.

BTW, signalling at a plane is useless. In fact, it could even be illegal.

The following items were stolen from my vehicle Sunday afternoon, January 22nd:

* Motorola UHF handie-talkie
Type: HT-600
Model: H44SVU7160CN
S/N: 649AQL7114

Had orange stickers on side that said:
DEC SRC ERT
ch6 - Horak

* Icom UHF handie-talkie
Model: IC-U16
S/N: 08794

Had orange sticker on back that said:
N6BDE

If you have information about either of these, please contact Officer Paul Brown
of the Palo Alto Police Department at 415.329.2406 (case number 95-022-036),
or send me email. Thanks.

Reward if you help feed the thief to the rabbits with the nice sharp pointy teeth.

Source record: 253198

A local group of hams in our area are in the process of putting on a ham class for the Novice/Technician class of Licenses. We have gone around to various merchants asking if we could put flyers in their store windows advertising for the class. All of the merchants have been very helpful and have let us advertise in their storefront windows except for the local Radio Shack. This is the second time we have tried to put a flyer in their storefront window and they have said NO!

I thought this was kind of ironic since Radio Shack is the only merchant that directly benefits from the class since some of the students buy their books from Radio Shack.

I would like to know if any other hams have had a similar problem with Radio Shack? Or does anyone know who to contact at the corporate office with Radio Shack to discuss this matter.

Also I would like to know if anyone else has any super ideas as to how to promote a ham class before it starts. We have about two weeks to promote the class before it starts.

Any help and/or suggestions will be most appreciated.

/>Radio Shack to discuss this matter.

You should contact the corporate office. I know that this was done in the Boston area a couple of years back. They issued a letter of authorization that clubs could reproduce and show to the store managers.

->

Yes, NY State will issue an Amateur Radio registration with your
call on it. Just go to DMV with a copy of your ticket and bring your
license and registration docs for I.D.

I suspect that because few people do ask for the specials you may
have to talk to a few clerks and their supervisors before you find one
who understands what you want. WHATEVER YOU DO THOUGH, DON'T USE THE
WORD "VANITY!" ... they'll tack on the extra $25 fee!

866. Digest of Articles - QST Dec 94 (Long - 50k)

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-24 11:31:42 UTC
From: wvanho@infinet.com
Message-ID: <3g2oeu$t51@horus.infinet.com>
Source record: 253276
Cross-posted to: rec.radio.amateur.misc,rec.radio.info

Following are digests of articles printed in the December, 1994 issue of QST. Such digests are prepared for each issue of QST, and posted periodically.

It is hoped that other hams will volunteer to post similar digests of the other ham technical publications such as QEX, CQ, 73, COMMUNICATIONS QUARTERLY, RTTY JOURNAL, et al. Especially desirable would be digests of publications in other countries, such as the RSGB RADIO COMMUNICATIONS and ham magazines in Europe, Japan, Australia, and other countries around the world. We English speakers would especially enjoy them if they were translated into our language, but they would also be valuable additions to the world's knowledge if they were posted in the language of origin. Who knows? Some bi-lingual ham somewhere might translate them into English and re-post them.

Worldwide communications are getting better and better. The time has come to make the world's ham press available to all hams throughout the world!

The major value of digests is to give readers sufficient information to decide whether to obtain a copy of the full text. If any U.S. reader wants a copy of an article in QST, please inquire of other hams in your own neighborhood. Many have collections of back issues. Anyone who is unsuccessful in finding a fellow ham with a collection should try every library in the area, especially those at universities and technical colleges. If all else fails, a copy can be obtained from the ARRL Technical Department, 225 Main St., Newington, CT 06111-1494 USA for a fee of $3.00 per copy. Remember, it is both cheaper and quicker to obtain one locally.

Readers in most other countries can obtain copies from their own national ham organizations, sometimes translated into their own languages.

TECHNICAL ARTICLES (TA)

Title>TA1:An Inexpensive SSTV System Continues to Grow
Author>Vester, Ben - K3BC
Source>QST Dec 94, pp. 22-24
Abstract>Improvements and additions to the software SSTV system.

Digest>Since K3BC described his software SSTV system in QST Jan 94, a considerable number of hams have gotten on the air with them. In response to feedback he has received from users, as well as from his own continuing experiments, he has made a number of additions and improvements to the software. This article contains descriptions of a number of the software upgrades that he now makes available.

The first is to allow attractive "wallpaper" to be used as the background for menu screens. That is, a color photo or other digital image can be displayed in the background with the words, or other ASCII characters of the menu, superimposed over it.

Because picture files tend to be very large, a new SAVE routine has been added to compress the image file as it is being downloaded. Correspondingly, the TRANSMIT software has been reconfigured to handle files in either the full or compressed format.

A number of new modes, involving both hardware and software, have been added to the system. One was developed to make use of new and more sophisticated video cards that are now on the market. Also, a software mode that doubles the resolution in both directions has been added. Other software routines have been included to make it possible to use images not only from a TV camera, but also obtained from Internet sites, from CD ROMs, or from other sources.

These and a number of other modifications which make for easier operation are available on the ARRL Bulletin Board system at (203) 666-0578. They are all embodied in the file: VESTER_F.ZIP. The same file is being mirrored on Internet and on other BBSs.

Title>TA2:Exploring Intermodulation Distortion in RF Switching and Tuning Diodes
Author>Thompson, Tom - W0IVJ
Source>QST Dec 94, pp. 25-27
Abstract>Lab tests of popular PIN diodes as substitutes for PN switching types to reduce IMD in receivers. Also a test of a tracking preselector for the same purpose.

Digest>The three-part article by Rohde: "Key Components of Modern Receiver Design" in QST May, June and July, 1994 made a very strong case that the front ends of currently popular amateur transceivers create excessive intermodulation distortion (IMD). He showed that their performance could be inexpensively improved by the substitution of PIN diodes for the PN switching types currently used in selecting r.f. filters.

W0IVJ has made extensive lab tests of readily available PIN diodes rated for r.f. usage and, for comparison, a diode that contains a PIN structure but was not designed for r.f. use. These tests showed conclusively that r.f.-rated diodes show greatly superior performance compared to other components.

In addition, the author made a test to see whether a tracking preselector utilizing PIN diodes to switch capacitors might be an attractive alternative to the selectable bandpass filters that are commonly used today. A schematic diagram of his test circuit is included. His conclusion is that it would be a viable alternative.

Title>TA3:An ATV Station for 915 MHz - Part 2: A Tunable ATV Downconverter
Author>Graf, Rudolph - KA2CWL and Sheets, William - K2MQJ
Source>QST Dec 94, pp. 28-32
Abstract>Construction details of a receiving downconverter as a companion to the transmitter described in Part 1. It converts received signals on the 915-MHz. band to Channel 3 or 4 in the TV broadcast band.

Digest>The first part of this article, in QST Nov 94, described the construction of the transmitter portion of the station. In this article, the authors describe a receiving downconverter that is physically small, easy to build, and designed for mounting outdoors on the antenna mast. It converts the received signal from the 902- to 928-MHz. band to either 61.25- or 67.25-MHz. (Channels 3 or 4) so that it can be received on a standard TV set.

The circuit uses two stages of r.f. amplification, a doubly-balanced Schottky mixer, and a tunable local oscillator. It is all built on a PC-board 2-1/2 x 4 inches (63 x 100 mm.).

The authors previously stated that one of their goals is to familiarize builders with the construction techniques usable at microwave frequencies. Accordingly, much of the article is devoted to detailed instructions on coil winding, soldering, and other specialized procedures.

Alignment of the finished unit can be done with only a signal source, a TV set, a suitable power supply, and an analog or digital VOM. The signal source could be the transmitter described in the first installment if sufficient precautions are taken to attenuate the signal strength so as not to overload the receiver circuits. However, if a frequency counter and a signal generator covering the respective

frequencies of r.f. and i.f. were available, they would make the entire procedure somewhat easier.

An etched and drilled PC-board and other parts are available from North Country Radio, PO Box 53, Wykagyl Station, New Rochelle, NY 10804-0053.

Title>TA4:The Quick Powerhouse
Author>Miller, Russ - N7ART
Source>QST Dec 94, pp. 33-37
Abstract>Construction of a high-power amplifier, with a quick-warmup tube, for 2-meters.

Digest>According to the author's account, a major goal for designing and building this amplifier was to obtain quick warm-up. Most high-power amplifier tubes require several minutes for the cathode to heat to operating temperature; N7ART's design uses a new tube, the 3CX1200Z7, which warms up within 10-seconds after power is applied to the filament. His concern for such instant response is caused by his interest in working transient sporadic-E propagation events.

The amplifier he built is capable of producing 1200-watts output on the 2-meter band. His d.c. power supply delivers 3200-volts at 750-mils. Operating at full power, the amplifier requires 85-watts of drive; d.c. input power is 2400-watts and plate efficiency is 50-percent, so plate dissipation is more than 1200-watts.

The unique features of the design are primarily mechanical. The tube is mounted directly on a sub-chassis, without the use of a tube socket. The design of the output circuits is complex, both mechanically and electrically. Much of the design is borrowed from the RADIO HANDBOOK, 23d Edition, W. Orr, Editor, published by Howard W. Sams & Co., 1987. Anyone contemplating construction of a similar amplifier should consult that reference for details.

Title>TA5:Key Components of Modern Receiver Design: A Second Look
Author>Rohde, Ulrich L. - KA2WEU
Source>QST Dec 94, pp. 38-42
Abstract>Description of a tracking filter used as a preselector in a receiver front-end to eliminate the IMD caused by filter-switching diodes.

Digest>This article is a follow-up to the three-part series that ran in QST May, June and July, 94. It is also a companion piece to the article by Tom Thompson - W0IVJ, designated TA2 in this issue. Dr. Rohde notes that Mr. Thompson found Motorola MPN-3700 PIN diodes to work about as well as the Siemens and H-P units, although they cost less than $1.00 each, a significant factor when one is replacing the 40-some diodes in an amateur-band transceiver.

Described is an alternative means of improving the second- and third-order IMD performance of receiver front ends: the substitution of a

tracking input filter to replace the bank of switchable bandpass filters that are commonly used in today's transceivers.

Shown in photographs and also in a circuit diagram is the tracking filter that is supplied with the Model ESH-2 receiver manufactured by Rohde and Schwartz Company. The assembly actually contains two filters, one of which covers the range from 10- to 20-MHz., and the other 20- to 30-MHz., selected by a relay. Each filter contains a single resonant circuit that is tuned by a bank of paralleled tuning diodes. Relay switching eliminates completely the IMD caused by switching diodes, but inserts tuning diodes in the circuits, instead. To insure good performance, Dr. Rohde designed the tank circuit using many tuning diodes in parallel with a high C-to-L ratio. The use of this filter guarantees an intercept point of +30-dBm., or better.

A second alternative is a tunable input filter that uses a bank of diodes to switch fixed inductors and capacitors in binary steps. As an example, seven capacitors with values of 1, 2, 4, 8, 16, 32, and 64 pf., switched in a binary sequence, would provide a net capacitance (neglecting leads) of 1- through 127-pf. A filter using that approach is also illustrated in photographs and circuit diagrams from another model receiver built by the same company.

Note is taken of the fact that the earlier series of articles found the Ten-Tec Argosy VI to be at the low end of the second-order IMD performance curve. Since then, a simple modification has been made that has raised the intercept from +40- to more than +60-dBm.

Title>TA6:A Simple, General-Purpose AF Amplifier
Author>Spencer, Ben - G4YNM
Source>QST Dec 94, pp. 43-44
Abstract>Building a very small audio amplifier using two IC chips.

Digest>Described is a general-purpose audio amplifier, small enough to be built easily into almost any piece of electronic equipment, even the base of a microphone. It features very high input impedance, very low output impedance and ability to provide adjustable gain from 0 to 74-dB. It will deliver up to 1-watt of output.

The circuit is made up of two ICs. The first is a low-noise FET op-amp; the second is an audio power amplifier. The gain of the first stage is switched in three steps: 0-, 20- or 40-dB. A continuously variable pot controls the power amplifier over the range 0- to 34-dB. Operating bandwidth is 16-Hz. to 30-kHz. Two output connectors are provided; a "LINE" output with a nominal impedance of 600-ohms, and a low-impedance output suitable for driving a loudspeaker or other power-consuming load. Power supply requirements are 12- to 14-volts.

Construction is simple and straightforward. An etched and drilled PC-board can be obtained from Far Circuits, 18N640 Field Court, Dundee, IL 60118-9269, for a price of $5.50, including domestic shipping.

PRODUCT REVIEW (PR)
Conductor: Mark Wilson - AA2Z
Editor, QST

Title>PR1:Watkins-Johnson HF-1000 General-Coverage Receiver
Author>Newkirk, David - WJ1Z
Source>QST Dec 94, pp. 76-79
Abstract>Review of the first receiver marketed to amateurs that uses i.f. DSP for filtering, AGC, and demodulation. Has many good features but falls down badly in others.

Digest>Digital signal processing at audio frequencies became a factor in Amateur Radio receiving within the last five years and was accepted enthusiastically by the ham community. Ever since, amateurs have been speculating over how long it will be before DSP techniques will be possible at i.f. frequencies so that all of the functions of i.f. filtering, automatic gain control, signal detection and demodulation will be done digitally. The Watkins-Johnson HF-1000 is the first product entry on the market to attempt that.

This expensive receiver, selling for some $4000, covers from 5-kHz. to 30-MHz., with 1-Hz. resolution of both tuning and front-panel display. Its operating modes are AM, Synchronous AM (SAM), narrow-band FM, CW, USB, LSB and independent sideband (ISB). It provides i.f. filters with 58 different selectable bandwidths, a noise-blanker, i.f. notch filter, AGC, squelch, and scanning. Output connectors are available for headphones, LINE, separate outputs for USB and LSB during ISB reception, and speaker. It can be computer-controlled via an RS-232 serial port. The front end contains a switchable pre-amplifier. The signal-level meter is calibrated in absolute terms, dBm., and the reading is not affected either by the presence or absence of the pre-amplifier or by gain-control settings.

Front-end circuitry delivers the input from the antenna to a DMOS FET passive mixer that up-converts to the 40.455-MHz. first i.f. A 30-kHz. roofing filter limits the bandwidth, after which comes some i.f. amplification and variable attenuation. A diode double-balanced mixer converts the signal to the 455-kHz. second i.f., and an analog multiplexer again converts it to the 25-kHz. third i.f., where digital signal processing occurs.

Laboratory tests show that receiver noise floor, with a 300-Hz. bandwidth i.f. filter in use, is -140 dBm. while the pre-amp is in operation and about -133 with the amplifier off. Blocking dynamic range with the same i.f. filter measures between 107- and 112-dB. without the pre-amp, 103- to 106-dB. with it in use. Second-order IMD intercept is +44-dBm. with pre-amp off, +46-dBm. with it in use. Third-order IMD intercept measured between 27- and 33-dBm. with the pre-amp off, 16- to 21- with it on.

Despite the creditable performance and the really striking new features demonstrated by the HF-1000, the reviewer did not give it a good overall rating because of several glaring deficiencies. The first major flaw is the performance of the AGC. Its decay time can be switched to FAST, MEDIUM, or OFF, but the attack time is 15-milliseconds, at least ten times too long! The result is that any strong signal or noise pulse causes an extremely annoying "Pop" before the AGC has time to take hold. Consequently, the FAST and MEDIUM settings are unusable. Operating the AGC with long decay time reduces the number of "Pops" that must be endured, but is clearly not an acceptable condition for most reception.

The next problem in the design concerns passband tuning. The passband can be adjusted in 10- or 100-Hz. steps over plus-minus 2-kHz., but only in CW mode! It is not available in the SSB mode. This limitation can be partially overcome if one listens to SSB in the CW mode by setting the BFO offset to 0-Hz., then adjusting the passband tuning for optimal rejection of the unwanted sideband; but this makeshift "work-around" is hardly to be expected in a $4000 receiver.

Third, the notch filter in the HF-1000 is manually tunable plus-minus 10-kHz., and is very effective. But many outboard DSP filters now in use offer automatic heterodyne elimination of any number of interfering carriers. Why does not the HF-1000 make this function automatic?

For AM reception, synchronous detection is a great asset, and the HF-1000 offers very high-quality SAM. But it cannot do selectable-sideband synchronous AM detection! It is hard to fathom what possible reason the designers could have had for omitting this obviously useful feature.

The final failing described by the reviewer is the very low quality of the audio produced by the receiver. It is contaminated by several types of digital noises, including high-pitched whines, medium-frequency drones, and low-frequency thumps. It seems clear that the manufacturer did not exert the required effort to clean up the circuitry to eliminate internal cross-coupling.

In summary, the presence of the Watkins-Johnson HF-1000 on the market shows that the time when DSP receivers providing quantum leaps in performance will be available for ham use is very near. But it has not yet arrived.

Title>PR2:ASAPS and CAPMAN: HF Propagation-Prediction Software for the IBM PC
Author>Straw, R. Dean - N6BV
Source>QST Dec 94, pp. 79-81
Abstract>Computer programs to allow amateurs to calculate current propagation conditions.

Digest>Some 20-years ago, a program for mainframe computers was created, named IONCAP, to calculate probable HF propagation conditions based on the solar activity and other conditions prevailing at the moment. Ever

since, QST has run a series of graphs in every issue indicating the time of day and the frequencies that are likely to provide successful communication between the different parts of the USA and various countries around the world. Continuous improvements in the program have been made and, by now, it makes reasonably accurate predictions. But by the time the magazine gets into the hands of readers, conditions may have changed considerably in unpredictable ways.

Now the computing capacity of personal computers approaches, or surpasses, that of mainframes that were available when IONCAP was developed. To take advantage of the widespread availability of great computing power, two new professional-quality programs have been made available to operating hams that make predictions nearly as good as those of IONCAP. Users can now calculate their own predictions using currently available solar data obtained from WWV broadcasts.

One of these programs, CAPMAN, actually uses the same calculating routines used in IONCAP and wraps a "shell" of user-friendly features around it. The other program, ASAPS, was developed in Australia and uses somewhat different mathematical algorithms.

ASAPS is primarily designed for commercial broadcasters and communication networks. It calculates and reports a number of propagation and operating conditions that are of importance to to them, but of less concern to amateurs. CAPMAN, on the other hand, seems to be tailored more directly for amateur use.

ASAPS is priced at $275, whereas CAPMAN sells for $89. The reviewer tested the performance of both programs, using the logs of active amateurs who participated in the ARRL CW DX Contest in February, 1994. Both programs made projections that were quite accurately borne out by the actual QSOs logged. What slight differences there were between them seemed to favor the performance of CAPMAN. Judging from that performance plus the greater ease of use and lower price of CAPMAN, the reviewer recommends it as the better value for hams.

CAPMAN is produced and sold by Lucas Radio/Kangaroo Tabor Software, 2900 Valmont Rd., Suite H, Boulder, CO 80301, (303) 494-4646. ASAPS' North American distributor is Jacques d'Avignon, 965 Lincoln Drive, Kingston, Ont. K7M 4Z3, Canada.

TECHNICAL CORRESPONDENCE (TC)
Conductor: Paul Pagel - N1FB
Assoc. Technical Editor

Title>TC1:Elevated Radials Work!
Author>Bowen, Arlan - N4OO
Source>QST Dec 94, p. 84
Abstract>Results of a 160-meter antenna installation that substituted four elevated radials for a large number of buried radials, with

superior results.

Digest>N4OO recently moved to a new location and needed to erect a 160-meter antenna quickly to participate in an operating event. He was able to get a 51-foot (15.5-meter) vertical into the air, but did not have time to lay an extensive set of ground radials. Instead, he strung four 150-foot (46-meter) radials 10-feet (3-meters) above the ground. Since the tower rests on an insulated base at ground level, each radial is attached to the bottom of the tower and rises at a 45-degree angle to a 10-foot high post located 10-feet from the antenna; from the posts they run horizontally through the woods, supported by fence insulators attached to trees.

Since the 51-foot vertical is only some 35 electrical degrees high, it exhibits a large capacitive reactance at the base. The author used a large diameter coil to cancel the reactance, then tapped the feedline partway up from the bottom, approximating the 50-ohm impedance point.

The results of his antenna installation have been outstanding, substantially better than those he obtained from his 60-foot, (18-meter) top-loaded, shunt-fed tower with buried radials at his former location.

Title>TC2:More Tower Safety Tips
Author>Burkhart, Howard - KB6MYE
Source>QST Dec 94, pp. 84-85
Abstract>Safety precautions for working on towers.

Digest>This letter contains added comments to supplement the advice written by Mike Cook - KC8EG in his "Tower Safety Tips", QST Aug 94, 40-41, as follows:

1. All hard-hats should be held in place with chin-straps. A side-blow from a swinging boom can knock an unstrapped hat off one's head with the first blow, and kill on the return swing!

2. Cotton gloves are somewhat slippery; leather gives a safer grip.

3. Be sure that goggles have an ANSI rating for impact protection.

4. Always remember that there is usually no brake on a rope and pulley being used to hoist heavy items up the tower. NEVER stand, on the tower or on the ground, underneath a load being hoisted.

5. Rope that is used to tie a person to an object should be nylon, 7/16-inch (11-mm.) diameter for one person, or 1/2-inch (13-mm.) for two people, using "kernmantle" type construction. For other uses, nylon rope with at least a 10:1 safety factor in rated strength should be used.

6. Take full account of the weather conditions. If the day is hot, make sure that climbers drink plenty of water, not caffeinated or alcoholic drinks. On cold days, beware of frostbite.

7. Have someone available on the ground who is trained in first-aid, and have first-aid supplies available. If someone should fall, don't move them unless CPR is necessary. Get professional help first.

LAB NOTES (LN)
Conductor: Steve Ford - WB8IMY
Asst. Technical Editor

Title>LN1:Lightning Protection - Part 2
Author>Tracy, Mike - KC1SX
Source>QST Dec 94, pp. 45-46
Abstract>Advice on methods for lightning protection.

Digest>This article continues a discussion of lightning protection for an amateur station in a question and answer format. The first advice given is to consult experts for specific applications of protective methods. One should start with local government to learn about building codes and safety regulations regarding antenna structures. Also, contact the ARRL Section Manager for reference to an ARRL Technical Adviser or knowledgeable hams in the area.

Grounding materials, in general, should be made of copper. Copper flashing (coils of thin strip) is available from lumber yards. Strip copper, 1-1/2 inches (38-mm.) wide and at least 0.051-inches (1.3-mm.) thick is the minimum recommended for ground connections. Strip material is better for grounding than wire of the same cross-section because of lower inductance. Ground rods should be at least 8-feet (2.4-meters) long and should be either solid copper, or copper-clad steel.

Since antennas are most probably the highest metal objects on the property, they are the most likely objects to be struck, so proper grounding of the tower is essential. One should establish multiple paths for the current to reach ground, which means multiple ground rods, buried radial copper wires, or both. Splices in wire and connections between wire and rods should use compression joints with ample contact area providing copper-to-copper contact. Do NOT use solder.

To prevent current from following the feedline into the shack, the line must be grounded OUTSIDE the home or shack. Any other conductors, such as rotator control cables, that lead from the tower toward the shack must also be grounded either directly or through a lightning arrestor. Several types of lightning arrestors are made by a number of companies.

The only foolproof way to protect station equipment is to disconnect all equipment from the antenna and also from the power lines when it is not in use. Further, the disconnection must be made outside the shack. It would not suffice to unscrew a coax lead from a transceiver, then leave the disconnected coax lying near the rig.

The article ends by listing names and addresses of about a dozen manufacturers of lightning protection equipment.

HINTS AND KINKS (HK)
Conductor: David Newkirk - WJ1Z
Sr. Asst. Technical Editor

Title>HK1:Curing "Wrong VFO" in the Yaesu FT-101E
Author>Schick, Martin - KA4IWG
Source>QST Dec 94, pp. 82-83
Abstract>Modification of a transceiver to help avoid transmitting on the wrong frequency when operating split-frequency.

Digest>Many DX stations operate split-frequency; that is, they transmit on one frequency and instruct listeners to call on a different frequency to prevent a pileup of callers from obliterating the DX signal. A common occurrence is that, when the pileup gets thick, one or more stations call on or near the DX station's frequency, contrary to instructions. The author of this letter speculates that many such transgressors are doing it accidentally and are probably ignorant of the fact that it is happening.

His own Yaesu FT-101E contains one switch that controls whether the external or internal VFO is used for receive or transmit. It is a 4-position switch. Operating properly on split frequency requires that that switch be rotated one step clockwise and one counter-clockwise to call and listen alternately. In the "heat of battle", if the operator by mistake turns the switch one step in the wrong direction, or two steps in the right direction, from that point on the transmitter will be on the wrong frequency until the operator notices the error, which may take some time.

KA4IWG decided that his rig's "human engineering" was faulty; it makes it too easy to do the wrong thing. To reduce the likelihood of making that mistake, he installed a separate toggle switch, mounted on the top of the cabinet, and rewired the control switching network so as to make a mistake most unlikely.

Circuit diagrams are included with the letter to enable one with an FT-101E to duplicate the modification.

Title>HK2:Plug-In Bypass Capacitor Stops Keying Glitches
Author>Van Horn, W. P. - K3CP
Source>QST Dec 94, p. 83
Abstract>A bypass capacitor eliminates problem from RF feedback.

Digest>Mr. Van Horn found that, when operating CW while running his 1-KW amplifier, feedback into the keying circuit held it in the key-down condition transmitting at full power until he shut it off. Ferrite chokes and beads distributed through the circuit did not help.

He found the solution to be a simple bypass capacitor across the keying jack.

Title>HK3:More on Slingshot Antenna Installation
Author>Ashworth, Dennis - K7FL
Source>QST Dec 94, p. 83
Abstract>Tips to save loss when shooting antenna support line over tree branches.

Digest>Verifying the results of others who have reported success in the use of slingshots to attach an antenna to a top branch of a tree, K7FL offers some further details. He ties a fishing sinker to a short length of relatively low-strength line, as a leader. This is, in turn, tied to a heavier line on a reel.

Used in this way, if the sinker gets wrapped around a branch, he can pull hard enough to break the leader without losing the entire length of line. Usually when he does so, the sinker and leader also fall to the ground. If they do not, the only loss is a lead sinker and a short length of line.

He uses a 2- to 3-ounce (56- to 79-g.) teardrop sinker, 8- to 12-pound (3.6- to 5.4-kg.) monofilament line as the leader, and 20- to 25-pound (9- to 11-kg.) monofilament line as the main line. He reports that he can repeatedly and accurately shoot lines over his 100- to 125-foot (30- to 38-meter) high fir trees.

Title>HK4:PTT Line Protection for Radios in Packet Service
Author>Stahl, Jim - K8MR
Source>QST Dec 94, p. 83
Abstract>Means of eliminating damage due to transients.

Digest>On at least two separate occasions, VHF/UHF transceivers used as packet cluster nodes were damaged by electrical storms that left the transmitters locked up in the TRANSMIT mode. In both cases, the transceivers were made by Kenwood but were different models.

K8MR diagnosed the problem as having been caused by a voltage transient on the push-to-talk (PTT) line. He solved the problem by mounting a 5.1-volt Zener diode at the mike jack connecting between the PTT line and ground. The Zener will clip any transient greater than +5.1 or -0.6 volts.

FEEDBACK (FB)

Title>FB1:"Function Generator With a Frequency-Counter Digital Readout", QST Apr 94
Author>G4YNM
Source>QST Dec 94, p. 85
Abstract>Correction of mislabeled capacitors in schematic.

Digest>In Figure 3 of the referenced article, on page 38, C13 should be labeled "C14", and C14 should be labelled "C15".

NEW HAM COMPANION (NHC)

Title>NHC1:QSL Cards? Before You Write That Check....
Author>Bowles, Chester S. - AA1EX
Source>QST Dec 94, pp. 64-66
Abstract>Description of different types of QSL cards.

Digest>Exchanging QSL cards is a courtesy and a ham tradition that dates from the earliest history of amateur radio communication. There is no reason that cards must be custom-printed, although most are.

One must never forget the real purpose that a QSL card serves: it confirms a contact between two amateur radio stations. The necessary information is the call letters of the confirming station, the call letters of the station contacted, the time and date of contact, the frequency band and the communication mode used, a signal report, and the name and return address of the sender. Any card that contains those pieces of information qualifies as a bona fide QSL card.

Title>NHC2:The Doctor is IN
Author>Various
Source>QST Dec 94, p. 67
Abstract>Questions and answers of primary interest to newcomers.

Digest>Questions discussed in this issue include: simplex autopatches; power requirements of TNCs; cleaning contacts on a rotary switch; computer memory requirements for running TCP/IP; and strange signals heard on 160-MHz.

Title>NHC3:The View from Above
Author>Ford, Steve - WB8IMY
Source>QST Dec 94, pp. 68-70
Abstract>Capturing earth photos taken by amateur satellites.

Digest>Four of the amateur satellites that are in orbit carry cameras that periodically take pictures of earth, record them in memory, and transmit them to earth as digital packet data.

OSCAR 18 (Webersat) is a Microsat (tiny satellite). Pictures are snapped on command from the ground-based operators about once per week. The images are then transmitted continuously on 70-cms. until the next picture is shot. Only a receiver is needed to capture these signals, no transmitter is required.

To receive and display the images, one must be able to receive on the appropriate frequency, must have a TNC with a phase-shift keying (PSK) modem and a computer with display software. Because of the slow speed of transmission, it is not possible to receive an entire picture file as the satellite is making one pass overhead. A minimum of two passes are required.

The software required to decode the image file and put it into a form that can be displayed on a PC is called "Weberware". AMSAT sells these programs at reasonable prices.

Oscars 22, 23 and 25 operate differently. Like Oscar 18, they take pictures on command from the ground, but they communicate much faster, at 9600-baud.

To capture a file from one of these, one must first download a Directory listing the available pictures. After selecting the one wanted, one uploads a request and the satellite responds. Hence, the receiving station must be equipped both to receive the 70-cm. downlink and also to transmit on the 2-meter uplink.

Complete information about how to go about this is available from three sources: "Computer Processing of UO-22 and KO-23 Images", by Walter Daniel - KE3HP, printed in the Jan/Feb, 1993 AMSAT Journal; "Webersat: Step by Step", by Steve Ford - WB8IMY, in QST Dec 93, p. 63; THE DIGITAL SATELLITE GUIDE, which can be purchased from AMSAT, PO Box 27, Washington, DC 20044

Title>NHC4:FM Contesting on Taylor Mountain
Author>Parmley, Bill - KR8L/7
Source>QST Dec 94, p. 71
Abstract>Contesting from a mountain top in Idaho.

Digest>KR8L/7, along with several other local hams, took transceivers and antennas to the top of Taylor Mountain, 7000-feet (2130-meters) above sea level. It is located near Idaho Falls, ID in grid square DN43. They set up their station adjacent to WA7KRP's 2-meter FM repeater and borrowed operating power from the site. This article describes the enjoyment that was had by all participants.

The author describes grid squares, which are a method of dividing the earth's surface for identifying radio locations. A grid square map is available from ARRL Headquarters for $1.00. Also, grid square information is in the ARRL Operating Manual.

Title>NHC5:Build an HF Walking Stick Antenna
Author>Capon, Robert - WA3ULH
Source>QST Dec 94, pp. 72-74
Abstract>Construction of an easily erected, portable antenna.

Digest>W3ULH and several hams planned a mini-expedition to set up a temporary ham station on an island off the coast of North Carolina. Most of the operation was planned to be on 20-meters, although they wanted to leave open the possibility of operating higher bands. They wanted an antenna that would be effective, easy to set up and take down, and also easy to carry. Accordingly, they built their own, a vertical made of telescoping aluminum tubing. The tubing used was 1-, 7/8-, 3/4-, and 5/8-inch (25-, 22-, 19-, 16-mm.) diameters. The 1-inch tube was cut to 4-feet, 8-inches (1.42 meters) length; the other three tubes

to 4-feet, 5-inches (1.35-meters).

For use, the tubing can be slid open and held in place with hose clamps, to form a quarter-wavelength at any band from 10- to 20-meters; four quarter-wave wire radials are laid on the ground and the antenna is fed with coax at the base. The vertical stands on a rubber/plastic insulator and is guyed with ropes at the top of the third section. When the tubing is collapsed, it is a convenient length to use as a walking stick!

A description of the antenna, including a schematic diagram and parts list, is provided.

Title>NHC6:A "Universal" VHF/UHF Antenna
Author>Miller, Dave - NZ9E
Source>QST Dec 94, p. 75
Abstract>Description of a commercial discone antenna.

Digest>This article describes the discone antenna, which is a very effective omnidirectional antenna that provides a low SWR load on any frequency over a very wide range. NZ9E bought a commercial version, rated at 200-watts transmitting, on any frequency between 50- and 1300-MHz.

The basic discone shape is a broad-based cone pointing upward; a round disk, nearly the same diameter as the base of the cone, is mounted horizontally with its center on an insulator at the apex of the cone. Most practical discones, like the author's, are made as "skeletons" of metal rods that approximate the cone/disk shape. The radiation pattern is approximately the same as that of a ground plane antenna cut for whatever frequency is in use.

The article finishes with a caution that it is necessary to use a low-loss transmission line at these frequencies for any cable run longer than a very few feet.

RADIO TIPS (RT)

These are short items, scattered among the articles in the New Ham Companion section, of interest to newcomers.

Title>RT1:International Third-Party Traffic - Proceed With Caution
Author>Anonymous
Source>QST Dec 94, p. 70
Abstract>A list of the few foreign countries to which messages can be sent.

Digest>Messages can be handled through amateur radio between the USA and other nations only if there is an official Third-Party Traffic Agreement between the countries. Then, it is permitted only if it is non-

commercial and of a private, unimportant nature.

The article contains a list of the countries with whom the USA does have such an agreement. Most nations in the Americas (even Cuba) are on the list; also Philippines and Australia (but not New Zealand). A very few in Africa, some Pacific Islands, and Jordan and Israel in the Mideast complete the list. No European nations are included, with the minor exceptions of the ITU station in Geneva and special-event stations in the U.K. having call signs with GB prefixes.

GENERAL INTEREST ARTICLES (GI)

Title>GI1:Exploring the Internet - Part 4
Author>Ehrlich, Scott - WY1Z
Source>QST Dec 94, pp. 47-50
Abstract>Describes software tools Gopher and The World Wide Web. Also explains Usenet Newsgroups.

Digest>This installment discusses two software tools, now available to almost all Internet users, that make finding information much easier. They are the programs called Gopher and The World Wide Web. Finally, a description of Usenet Newsgroups is included.

Gopher is a utility program that is completely menu-driven. Using Gopher, one can access computer resources located at almost every college or university in the developed world, as well as at many, many other sites.

When one enters Gopher, a menu is displayed listing sources, by name. After one is selected, a menu of available resources there is presented, and one can make selections from one after another menus, each narrowing the field to reach the precise kind of information sought. Once one reaches the final item desired, selecting that item from the menu will cause the actual document, or whatever is else is requested, to come up on the screen. It can be read, or downloaded to the user's own computer memory, as desired.

The World Wide Web system goes even farther. It allows one to search for specific information, regardless of where that information may be found.

Usenet newsgroups are discussion groups, like bulletin boards, devoted to specific subjects. As an example, there are about a dozen devoted to various aspects of amateur radio. In most groups, anyone is free to post messages to ask a question, to answer a question asked by another, or to make comments about one subject or another.

Each newsgroup has a name, which is its address, made up of a series of qualifiers. For example: "rec.radio.amateur.misc", for general ham discussions, "rec.radio.amateur.antennas", for antenna talk, and "rec.radio.shortwave" for SWL devotees. There are many thousands of

newsgroups, on almost every conceivable subject, active on Internet today, and more are being formed daily. Anyone who has a question about almost any imaginable topic will probably be able to find a newsgroup where the question can be asked with a very great likelihood of getting one or more replies.

Title>GI2:Monitoring the Shoemaker-Levy 9 Comet Impacts
Author>Pressler, E. C., Jr. - W3ZXV
Source>QST Dec 94, pp. 51-52
Abstract>Hams build a corner-reflector antenna and monitor radio noise at 22.210-MHz. from planet Jupiter during its collision with a comet.

Digest>In 1992, the orbit of the comet Shumaker-Levy 9 took it close to the massive planet Jupiter. The planet's strong gravity caused the comet to break into many smaller pieces and distorted its orbit. Soon after, astronomers calculated that, on its next loop around, it would collide directly with Jupiter.

In the process of breaking apart, some of the pieces of the comet were slowed slightly so that, by early 1994, telescopes showed more than 20 fragments travelling in the same orbit, strung out in Indian-file. It became clear that they would strike the planet, one after the other, over a several day period.

Radio astronomers knew that Jupiter emits radio waves under normal conditions, and the question was raised whether the comet impacts would cause detectable changes in that radiation. W33ZXV and two friends, Kurt Magni - NN3C and Walt Rauscher - N3EVV, decided to monitor Jupiter at HF during the impact events.

They selected the frequency 22.210-MHz. as the channel to monitor, since it is near the peak of the intensity of Jupiter's noise, and also because it was well above the expected MUF and likely to be clear of interference. Then they built a corner reflector, using a half-wave dipole centered in a corner made of chicken wire supported on a wooden frame. A 22-Mhz. preamplifier was mounted at the feed point and the output connected by coax to the author's Kenwood TS-940S transceiver. A stereo tape recorder was used to record the radio noise on one channel, and a time signal from WWV on the other. The amplitude of the noise was converted to d.c. which was recorded on a strip-chart recorder.

The first fragment of the comet to strike hit at about 19:48 UTC, July 16. The separation between Earth and Jupiter on that date caused a 43-minute delay in reception of the signal. Precisely on schedule, at 20:31 UTC, the normal Jovian hiss suddenly changed to a "rat-a-tat" sound that lasted for nearly 7-minutes. At the same time, the chart recorder showed a clear change.

The recordings and other data gathered was submitted to the Society for Amateur Radio Astronomy, in Atlanta, Georgia to be combined with all the other scientific data gathered during this unique event.

Title>GI3:An Interview With Robert W. Jones, VE3CTM
Author>Rinaldo, Paul - W4RI
Source>QST Dec 94, pp. 53-54
Abstract>Interview with the new head of the ITU Radio Communications Bureau.

Digest>Robert Jones is the new director of the International Telecommunications Union's Radio Communication Bureau. He is age 50 and became a radio amateur at 16, which was the minimum age at which ham licenses were given in Canada at the time. He later obtained Masters degrees in both engineering and business administration, and is still an active ham. He has held a number of administrative positions with the Canadian government.

The ITU is the international organization that meets periodically to negotiate treaties that establish the regulations controlling worldwide radio transmission. He will head the administrative staff at the ITU Headquarters in Geneva, Switzerland.

Title>GI4:A Christmas Card - With Apologies to Dickens
Author>Silver, H. Ward - N0AX
Source>QST Dec 94, pp. 55-57
Abstract>Fiction.

Digest>This is a story, illustrated with cartoons, in the vein of Dickens' "A Christmas Carol". The hero of the story is an old ham who has refused to send QSL cards for many years. The ghost of a dead ham friend returns and convinces him to mend his ways.

Title>GI5:Cuba: A Week to Remember
Author>Margelli, Janet - WA7WMB
Source>QST Dec 94, pp. 58-62
Abstract>A visit with Cuban hams.

Digest>WA7WMB, her husband Joe Lynch - N6CL, and Lauren Libby - KX0O visited Cuba as guests of the Cuban Amateur Radio Association (FRC) during the ARRL June VHF QSO Party. In view of the highly strained relations between our respective governments, the main concern of the visitors was to foster people-to-people relations between hams.

They had a very pleasant visit, made many friends, and succeeded in their purpose.

==SILENT KEYS==

Ronald Pain VK1WP

Ronald T.W. Pain (VK1WP) died at his home in Canberra on 12.1.95 aged 78 years. A notice to this effect was included under "Deaths" in the Sydney Morning Herald last Saturday 15.1.95.

Ronald served as a commissioned officer in 6 Div. Signals and 9 Div. Signals (NX180) in the AIF during WW2 rising to the rank of Major. He then resigned from the Australian Army and served with the British Army in India and Malaya rising to the rank of Lt. Colonel. On returning to civiian life he very successfully established Mellolite Venetian Blinds until taken over by Hunter Douglas. He then went into business making aluminium windows (Day View).

Upon retirement he undertook Mission work in PNG during which time he gained his Amateur Licence, firstly P29NRP (1976) then P29rp (1978). He returned to NSW in 1979 and built himself a house at Coomba Park (near Forster) and was issued with the callsign VK2DBH. About 4 years ago he moved to Canberra and was allotted VK1WP. He was a member of the WIA. He is survived by his wife Margaret, 4 children and 12 grandchildren.

--A. Franklyn Pain VK2DYP

Norman Rex Martin VK2AID

Norman passes away peacefully on the 22nd of December 1994 after a short illness. Norman was born at Cooma in 1915 and always enjoyed the magic of the radio waves. Leaving school early, he studied radio and was employed all his life in the industry.

First licenced in 1936 as VK2JE, Norman's gear and licence were confiscated at the outbreak of World War II. He did not return to Amateur Radio until his retirement in 1981, this time as VK2AID. It was in his late life that he was able to make many overseas contacts.

He is survived by his wife Nell, a daughter in America, and his son Lloyd VK2BYU.

Vale Ronald VK1WP and Norman VK2AID.

==VK2 PRESIDENT'S MESSAGE==

This is Michael Corbin, VK2PFQ.

Attention everyone who has not as yet written to their Federal Member, and unfortunately, that seems to be quite a few, at least that's how it appears from the feedback we are getting from some city electorates. How do I convince people to write a letter to save themselves.

I would like to think that everyone who listens to the broadcast would have written by now, but of course apathy is something only the individual can control. I exhort everyone who is capable of writing to do so and do so today. To this end my report this week will be brief. That will allow you to get stuck into it right after the broadcast.

Short of ideas or what to say, well then stick to the view that amateurs provide a community service in time of disaster. In my time of involvement with the hobby, amateurs have assisted in times of flood, fire, earthquake and cyclone. My father, the late Jim Corbin, the original VK2YC, was awarded the M.B.E. for his work in the floods in and around the Maitland area in the fifties. He always said it was the Institute that won it. Not him! It happened, to cut a long story short, that the Army, who was at the time in control of all rescue work. There was no WICEN or SES in those days. It was not even thought of!!! Anyhow the Army it appears, lost, I think it was three Army ducks. My father, always reckoned that Hams had the ability to set up a network at the drop of a hat..you know...for the same sorts of reasons that apply today. We have the gear, we have the network we etc. etc.... It came to pass that the WIA NSW Division was challenged by a Major Cox I recall, who couldn't find his missing army ducks. The challenge to "put your radio where your mouth is". Amateur Radio Operators found them within hours!!!! The whole rescue operation was then run from my father's Chemist shop at 78 Maloney St., Eastlakes. There were, I recall Hams everywhere all over the place and at all hours of the day and night. The pay was then exactly what it is today....3/5th's of 5/8th's of....You know the rest.

The same thing happened last year with the Bushfires, when I understand the SES lost communications around Gosford....Amateurs to the rescue once more. Our only problem is, WE DON'T SELL OURSELVES ENOUGH....Yes we are a modest lot, and...Yes we do hide our light under a bushel----Well, it's about time we had something more to say.

If our Dural Repeater was on the air last time, perhaps it would have been another story. If our Institute propaganda machine had been doing it's job, then everyone would have known about what amateur radio did for the community. Well it wasn't and they didn't. Another wonderful opportunity gone begging... So, pen to paper without further delay. Need an address, give us a call, we will give you one....or better still ring your Local Council and ask them for the name of your local Federal Member. It would be a shame if we lost this because of apathy.

The Divisional Council, which by the way has several new members.... Yeah! More have resigned, last night created a committee which will prepare an urgent submission for the SMA. This committee which will be chaired by PETER JENSEN VK2AQJ. It comprises DAVE HORSFALL VK2KFU, CESAR MIRANDA VK2TCM and RICHARD MURNANE VK2SKY. This committee, except for the chairman, was not, as will be alleged by the "knockers" hand picked; it was made up of volunteers. A submission will be prepared and once ratified by the Council, will be presented to the Government and the S.M.A.

So in the meantime write those letters PLEASE...As I have said before, YOUR FUTURE is in YOUR HANDS. If you have written, then get your mates to write a letter....stand over them if necessary, but write....

Since the last Council meeting there have been three resignations from Council. John Robinson VK2XY, Jim Walker VK2XJW and Terry Ryeland VK2UX. As is provided in the M. and A's the Council can operate as it is, or invite the next elected candidate to fill the vacancy created. The order in which these vacancies were filled was, Peter Jensen VK2AQJ, Eric Fossey VK2EFY and Steve Pullan VK2QZ. Peter Jeremy VK2PJ declined owing to business/family commitments.

I am at a loss to know why Messrs. Walker and Ryeland having resigned, had any business being last Thursday evening inside the Divisional Office....Not only were they in the office they were.... in the back room?????? How do I know....they set off the alarm. The Security Company called to report a break in?!@#$??...They did't realise, hear or suspect a thing.....Bang! Got Yah! I will be writing to them requesting an explanation. To date of those who have resigned, Terry Ryeland is the ONLY one who has returned his keys!!!! Terry also returned his Fax machine....We can't even find the others. Indeed we still don't know how many we really have.... Reason??? Someone stole(?) lost(?)....whatever(?)...The asset register. Ah! But, that won't happen again.

I wonder why one of them was going through cabinets; I can understand them wanting to check "the top of the safe", in case someone had left something there? But they had resigned....they had no business being there under ANY circumstances. I'm not one for calling the Police but, it sure leaves a bad taste in the mouth. I'm really growing very, very tired of this sort of nonsense.

I had promised this week information on our disagreement with the Federal body and our threathened withdrawal. There have been some more developments. I really don't like to telegraph my punches. So, I won't.

See you next week.

==DIVISIONAL NEWS==

Proposed Band Plan changes

For those who have had the time to follow the technical aspects of the hobby will be aware that some changes are to occur this year to the suggested mode usages in Australia of Amateur radio Service bands from 10 metres through to 13 centimetres.

he present band plans appear in the information pages of the annual callbook, the magazine "Amateur Radio", and other sources at the hobby's disposal and provide the reference to all on how best to use the bands.

For some time John VK3KWA, Chairman of the Federal Technical Advisory Committee has been seeking input for band paln changes and the review has now been completed. Your State Technical committee and your Federal Councillor have the latest updates.

Before the changes can be introduced they have to be placed before a Federal meeting and voted upon by all States.

In a broadcast such as this, it is impractical to cover evry change in detail so we will use, in part, the summary prepared by John VK3KWA.

The changes are of a technical aspect and are a separate subject to the proposed licence fee adjustment.

This year it is exected that new regulations will be introduced which includes the new grade of "Limited Novice" and access to 10 metres by "Limited Licensees".

at 10 metres there is a chance the Limiteds (Z calls) will have a sub band from 28.7 upwards. Plan changes have included a suggested Domestic FM segment 29.000 to 29.200, a separate simplex portion to the existing international FM portion at 29.5 to 29.7. It is b not clear in the proposed 10 metre changes if the 'limited' sub band overlaps with the existing Novice part.

At 6 metres minor changes to footnote wording is proposed and WICEN has requested a simplex frequency of 53.150 MHz. Yet to be finalised is a national fox hunting frequency and perhaps a second WICEN channel.

At 2 metres where it is expected that Novices will gain packet access, it is proposed to expand, for the final time, a packet sub band 144.700 to 145.200 MHz. This is required as this sub band would form part of Novice lecence conditions.

CW practice beacons would have to move from below 145 to jus5t below the satellite portion, channels for linear transponders, national fox hunting, WICEN, information beacons, RTTY and SSTV/FAX are proposed in the 145-146 region as well as two clear channels for earth/shuttle communications.

At 70 cm it is proposed to expand packet channel capacity to reduce 2 metre crowding. Proposed also are special purpose simplex frequencies for RRTY, SSTV/FAX and fox hunting.

There is to be an expansion from the present 1 MHz wide linking channels at 420 and 440 to 3 MHz portions, i.e. 420 to 423 and 440 to 443 MHz. This is achieved by recommending that ATV operation at 425 to 432 be VSB in place of DSB.

At 23 cm the phasing out of the CAA radars centred on 1275 MHz will allow adoption of a wider ATV portion at 1280, able to support one FM or two VSB channels, introduction of narrow modes, including beacons, at 1270 to 1272 and expanding repeater offsets from 12 to the international 20 MHz.

At 13 cm, a band where we are lo tose 100 MHz of the 150 MHz secondary service to MDS, the band plan reassigns various modes to above 2.4 GHz and aligns as required to international concepts and usage.

That in brief is the proposed band planning which will be voted upon at a future Federal meeting.

A copy of the proposal is available to inspect at the Parramatta office. Future broadcasts may, where practicable, contain expanded details.

Before closing this report - an allied matter concerning the VK2RWI 23 cm repeater. The band plan changes include the conversion this year of 12 MHz offset systems to the international 20 MHz offset.

At present VK2RWI operates on the 12 MHz offset with an input at 1293.750 and an output at 1281.750 MHz. Our change would be to shift to an output at 1273.750 MHz.

The repeater equipment is frequency adjustable so if there is any preference to change to alternative channels you can forward your proposals and reasons by writing to the Dural Engineer (Dave VK2ZTB) at the Parramatta office at P.O. Box 1066 Parramatta 2124 or on the FAX to (02) 633 1525 by the end of January 1995.

23 cm repeater VK2RWI

During this week the 23 cm repeater has ben ut of service for minor maintenance. It will return to service in the near future.

The checks have indicated that there is antenna problems which at the moment are presenting some difficulties.

It is proposed as part of band plan changes to adopt the 20 MHz international offset later this year. This will have the advantage of diplexing into a single antenna rather than the pair of antennas which present different coverage patterns.

To provide for the single antenna operation, the VK2WI technical team seeks cavity equipment able to operate at 23 cm or able to be modified to the band. If you have anything suitable or know where something can be obtained, please let the team know.

Trash & Treasure

The next Trash and Treasure at Amateur Radio House Parramatta will be on Sunday 29th January.

Items for sale include leftovers from the test equipment from last time, a large quantity of Low Noise Converters, for personal shoppers only. However country members will be able to place an order, so contact the Divisional Office for LNCs. These are Plessey model 12A LNCs.

There will be the usual private stalls selling all kinds of gear. Sellers will be admitted at 12 noon, buyers come in at 1 pm. There will be hot dogs and cold drinks on sale.

==FEDERAL NEWS==

Electromagnetic compatibility networks

The Federal government has moved to establish a nationwide education and training program on electromagnetic compatibility (EMC) standards to help the Australian manufacturers and suppliers of electronics equipment meet the government's new EMC standards which will come into force on 1 January 1996.

All electronic equipment manufactured or assembled in Australia, as well as imported equipment, will be required to meet the new EMC standards. It will not be retrospective, however. Goods produced before that date will not need to comply. The Australian Electrical and Electronics Manufacturers Association earlier last year expressed the concern that there may be some dumping of overseas-made non-complying equipment leading up to that date.

Central to the goverment's education and training program on EMC will be the establishment of EMC Regional Networks, managed around the country by local co-ordinators. The scheme is to be co-ordinated on a national basis by the Australian Electronics Development Centre (AEDC), based in Melbourne.

The AEDC is a company dedicated to providing specialised training for the Australian electronics and telecommunications industry. It is sponsored by a variety of communications, computer and electronics companies, along with several government departments.

In November, the AEDC called for proposals from interested parties wishing to become co-ordinators in the scheme and is presently working on establishing the EMC Regional Networks, the objective being to provide access to the knowledge of EMC experts and EMC programs, a forum for government and industry dealings over EMC issues and a structure for network members to work on specific EMC issues.

According to the AEDC, over 18 months the EMC Regional Networks will help both industry in general and individual companies develop and implement strategies for compliance with national and international

technical standards for EMC.

The WIA has made contact with the AEDC to see where the Institute and the hobby might benefit from some involvement.

Special event stations

Amateur radio will play a role in publicising the British-sponsored 1995 "Expedition Island Earth, Jason project" which, each year, takes a team of scientists and students on a scientific expedition.

In March 1995, the Jason Project will explore the volcanic islands of Hawaii. promotion for the expedition will be carried out at a number of UK sites, through the National Galleries and Museums.

The activities will be accompanied by several special event amateur radio stations. In the UK, GB6JAS will focus on VHF, UHF and satellite working. Further afield, GB0JAS will be heard on the HF bands. They plan schedules with British research vessels in the North and South Atlantic, according to the event organiser, Alan Clayton G7HZZ (QTHR).

The special event stations plan to commence operations on 5 March. Further information will be available in amateur radio press and on packet radio, closer to the date.

==WICEN NEWS==

We trust that all WICEN members are writing letters to the various politicians, objecting to the proposed massive fee increase. It is a good idea to write to the politicians' opposite numbers as well; a full list is circulating on packet radio and on Usenet. Don't bother signing any petitions, as they are generally regarded as a joke; a personal letter is far more effective, amd in the eyes of the politician it can represent a hundred votes. By the same token, don't send in any "form letters", as they are quickly recognised for what they are. In your letter, you might like to point out how CB operators, who are allowed to conduct business on their bands, have had their fees eliminated, yet the specially-trained Amateurs who make up WICEN and cannot transact business are facing an almost doubling of their fees.

There are no events this month, but two new events for the calendar are the Bathurst Car Rally on the weekend of 25-26th February, and the Eugowra Car Rally on 8th April; the organiser is Alan VK2YYJ, and please note that both events are merely tentative at this stage. Alan advises that a major event is the Oberon Car Rally on 29th April, and many people are required; he can be contacted on packet radio as VK2YYJ at VK2CZR. In the meantime, regular events for March include the RTA Car Rally over the week of 4-11th, and the annual Bungonia Cave Rescue on the weekend of

18-19th.

Those regions wishing to have their activities publicised on this broadcast are requested to get the details to the Publicity Officer, Dave VK2KFU, by Thursday night at the latest; packet radio is the preferred medium, to VK2AAB, VK2OP, or VK2GJB.

WICEN is always looking for members to provide the community with communications assistance. Write to WICEN (NSW) Inc, PO Box 123, St Leonards 2065 for further information, or come up on one of the WICEN nets: Blue Mountains on the first Monday of each month at 8.30pm on channel 7175 simplex, Hunter each Wednesday at 7.30pm on channel 6900, Northern Rivers each Wednesday at 8pm around 3610 kHz, Central Coast each Thursday at 8.30pm on channel 7125, and Sydney each Thursday at 9.30pm on channels 7150/8275. If there are any other regular nets then we'd like to hear about them.

-- Dave VK2KFU, WICEN (NSW) Inc. Publicity Officer

==NEWS BRIEFS==

Old spy satellites turn green

One of the problems facing scientists studying environmental degradation has been the lack of detailed knowledge of how things were before the environment came under close scrutiny. Now, thanks to some old spy satellites, all that is about to change.

U.S. President, Bill Clinton, is about to declassify millions of old spy satellite photographs taken between 1960 and 1972. These photographs provide a long-term base line from which to examine how the environment has changed over the last 35 years.

Also of interest is how spy technology has changed over the years. One of the early spy satellites, Keyhole 1, took its photographs on good oldfashioned film which was returned to earth by parachute for further analysis. Nowadays, of course, images are transferred by electronic means.

****

Still on matters orbital, a joint Japanese-German space capsule ended up somewhere in the Pacific Ocean this week instead of at Woomera, South Australia. The capsule failed to reach its correct orbit following a failure in the second-stage booster. The capsule re-entered the Earth's atmosphere somewhere between Japan and South America at 9 am on Monday.

Australian officials said that the failure would not affect our plans to make Woomera an international centre for space research. The Japanese government, meanwhile, plans to continue its space shuttle development programme. The Japanese intend to launch the shuttles from Kygoshima Space Centre and land them at the Woomera base.

****

News Briefs looks at communications news items that appear in the mainstream media. Thanks this week go to the Sydney Morning Herald. If your local or regional paper runs an item of interest to amateur radio operators, why not send a clipping to the Divisional office?

Once again on the subject of writing to the papers re the fees increase, those of you with Internet accesss might be interested to know that at least two major newspapers are on the net as well. If you wish to send letters to the Editor of either the Sydney Morning Herald or The Australian, you can now do so without putting pen to paper. The email address for the Herald is letters@smh.com.au, while The Australian's address is ausletr@ozemail.com.au. In addition, several journalists at each paper have their own email addresses.

Does anyone know of any other media outlets on the net? If so, please contact the Divisional office.

Perhaps a letter on the issue of this massive fee increase or the so-called spectrum access tax might be appropriate. For the best chance of publication keep your letters to less than 200 words, and confine yourself to one or two major points.

--Richard Murnane VK2SKY

==ROYAL AUST. SIG2 REUNION==

Royal Australian Signals Extraordinary Reunion

This is being organised by the Sigs 2 Australian Division Wagga Wagga on 11-12 March 1995.

It marks the 50th annniversary of our victory in the Pacific and the 80th anniversary of the Sigs 2 Divisional Prism Signals Second Division - an extraordinary occasion.

Signals veterans, next of kin and friends are cordially invited to attend this once-in-a-lifetime opportunity to meet up with those you have served, and are serving with, or our friends. On Saturday 11th March, a morning reception, a memorial service at 4.30 pm with medals, and evening dinner at 6.30 pm at the Wagga Wagga Leagues Club (dress - lounge suits).

This will give you the opportunity to reminisce from Gallipoli to the present day. Then to Sunday at Lemy Barracks with an 11 am chapel service, barbecue, a flight of pigeons, and a memorabilia display. For those staying on, an informal evening meal at the Wagga Wagga RSL Club. Partners and wives are welcome.

The meal on the night of 11th March will be a hot selection - three meats at $19.00 a head. We have to have a firm count a few days before, and we have the room to ourselves on the night.

Kelvin O'Connell will be in Wagga Wagga on Friday afternoon and will meet trains and coaches, planes etc. We are asking wives of departed members if they are interested in attending, or even any interested family or next of kin.

There will be a wreath-laying on the afternoon of 11th March at about 4.30 pm in remembrance of comrades who have passed on. This will be held at the Memorial Garden and Lagoon end of Bayliss Street.

For more information, Sydney listeners can contact Wilbur Wright on phone/fax (02) 948 4512, or Kelvin O'Connell on phone (06) 21 5737.

==CLUB NEWS: MID STH. COAST==

Mid South Coast Amateur Radio Club

The Annual General Meeting of the Mid South Coast Amateur Radio Club Inc. will be held at the "H Ranch". Little Forest Road, Milton on Saturday 4th february. Annual reports will be presented and election of officers for the forthcoming year will be held.

Arrivals are from 10.30 onwards. Visitors and families are most welcome. Please bring your picnic or barbecue lunch.

Our meeting place is a spectacular one with great mountain and ocean views and the South Coast is justly proud of its reputation for hospitality. We look forward to seeing you there.

from Stan VK2EL, Club Secretary

==CLUB NEWS: VHF TO SHF DX GROUP==

From the VHF to SHF DX Interest Group

The new year has started very quickly, but have you given any thoughts of what you are going to do this year? or are you going to add some excitements to your VHF/UHF contacts, the thrill of the chase and getting that new station a bit further away.

FM is OK, but SSB is better, contacts over distances of 300Km + are regularly been made. Get the thrill of getting a QSL card from that station knowing a repeater didn't help, you did it!

If you are interested in hearing more, join our Sunday net or come to our next meeting to be held at the WIA at Wigram Street, Parramatta starting time 7.30 Tuesday the 24 January 1995. All welcome.

The Group's Sunday net starts at 11:00 am after the end of the morning broadcast - I repeat - the morning broadcast, not the evening broadcast. The net uses 146.5MHz FM, this FM portion runs for approximately 30 minutes and then;

transfers to 144.150 MHz Upper Sideband.

The SSB activity night which is still being held every Tuesday evening 20:00 to 21:00 AEST is well patronised but certainly we would like to see some new stations so let's see you there and join in the fun.

-- Richard Soulie VK2ARS Publicity Coordinator

==CLUB NEWS: AATC==

Australian Amateur Television Club

The next meeting of the A.A.T.C. will be a combined committee meeting and minor general meeting - January 29th on a Sunday 1.00 pm at RCS Radio Bexley.

The purpose of this unusual procedure is so the Technical Committee can assess from the members attending as to what the

AATC will have on display at the Wyong Field Day ... a practice run you might say.

So please be here with your intended items for display to be logged on Sunday 29th of January 1995 at 1.00 pm - locstat = RCS Bexley.

The AATC welcomes any one interested in Amateur Television to call over on the day for information as to what, where and how.

For more information about the A.A.T.C. listen to the net on Tuesday nights from the Liverpool area on 146.625 MHz - approx 19.30 hrs - or watch us on 1250 MHz from our Oakdale repeater any-time.

Also you can ring the Publicity Officer on (02) 587-3491 bus. hrs.

Remember the Wyong Field Day is only 5 weeks away - see us there!

AATC Inc. Publicity Officer Bob Barnes

==CLUB NEWS: CHIFLEY==

Do you want to get your own Amateur Radio licence?

The Chifley Amateur Radio Club is conducting classes for the amateur radio licence.

They will cover Morse Code, Theory, and regulations, for an amateur radio licence.

The classes are on every Wednesday night at 7-30 pm.

The address is:
Good Shepherd School Hall, Hyatts Road, Plumpton.
100 metres south of Jersey Road. Opposite the new shopping centre building (Plumpton Markets).

Postal address:
Chifley Amateur Radio Club
Post Box 280 Mount Druitt 2770

Telephone number: 671-6992 or 637-2226

Once you have your Amateur radio licence, we will then show you how to connect your home computer to your radio and talk to the world using your computer.

Using any one of the many DIGITAL modes of communicating is a fascinating way to use your radio and computer.

Come along to our club rooms any Saturday afternoon and have a talk to any of any of our members for more information or come along on Wednesday night 8th Feb at 7-30 pm.

Visitors are always welcome.

JVFAX demonstration

The Chifley Amateur Radio Clyb will be putting on a JVFAX demonstartion on 28th January at 1-30 pm.

This demonstration will show you how easy it is to send and receive weather fax, or any other fax, SSTV, in colour using an IBM compatible computer and a very simple modem.

JVFAX70 is avery interesting program, it will open your eyes as it has to many other people.

The circuit board that we use is from RCS Radio.

This JVFAX demonstration is open to everyone.

As always VISITORS ARE ALWAYS welcome.

Bi-Monthly General Meeting

On 11th February the Chifley Amateur Radio Club will be holding its bi-monthly general meeting, at the club rooms starting at 1-30 pm.

At this meeting the members are able to ask the committee questions on operation of the club. At these meetings the committee ask the members for feedback on various topics in relation to the club.

These meetings are held so the members and the committee can communicate better, so no one feels like they are left in the dark.

The Chifley Amateur Radio Club holds meetings EVERY Saturday afternoon from 1-30 pm to 4-00 pm.

These meetings are held for the members and their friends to come along and tlk about any amateur radio, computer, related subject, or just to have a cuppa and chat with some friends.

So come along any Saturday afternoon and meet some of the members of the Chifley Amateur Radio Club. You will be welcome.

JVFAX demonstration on 28th January at 1-30 pm
Classes start on 8th February at 7-30 pm
General meeting on 11th February at 1-30 pm

from the
Chifley Amateur Radio Club Inc.

Publicity Officer: Ray Sparks VK2FKO

==COMING EVENTS==

Coming events

Now, a summary of upcoming events of interest to members and
other Radio Amateurs and Short Wave Listeners ...

Please note that the Divisional Office will be closed this month;
however, you can still call us, as the phone has been redirected
to a duty Councillor.

VHF to SHF Interest Group meeting. . . . . Tuesday

Kevin, What part of 40 are you trying to use. The QRM from the SW stations usually is pretty bad during the 0200 to 0400 period from 7100 to 7300. Below 7045 it is pretty quiet and your not competing with the digital modes , SW broadcasts, or SSB stations from outside US. If you are trying to work up in the novice portion, you need to use your filters on receive to pull the stations out of the heteradynes. The signals are there, and 40 is a great band in the evenings. As a matter of fact, there was a lot of activity this past Sat night on SSB between the heteradynes with the NA QSO contest. Don't give up hope. 73's Marc AA3JQ

Just wondering Les, if Part 97 is the rules for the Amateur Radio service,
how can they apply to any other service. Sorry, but they can't.

Although I agree that the radio was taken illegally, Part 97 is not the
instrument (the paragraph you cited) that allows a person to use any
means of communications in another service.

I am not familiar with the rules for any other service so don't know what
they may or may not say about emergency communications. California has a
serious problem with who can do what when and where in any part of the
radio spectrum for starters, including amateur. (I'm a native of California
and would not consider for a second to go back there to live.)

>handle H&W or other traffic to or from the affected area. Were
>that not the case, I suspect there would be quite a bit of traffic
>on special HF nets right now.

I don't know this authoritatively, but I believe that Japan does
have third party agreements with some Asian countries. I have heard
that packet traffic between Japan and the US is routed via Korea
for example.

>And, yes, with 1.5 million (or more) Japanese hams, I think that
>many of them probably played and are still playing an important part
>in emergency comms in the affected area. We will have to wait for
>normal communications to be restored to learn the full story, but
>ham radio is not just a relic from "the old days."

Again, not speaking authoritatively, I don't think the Japanese
amateur service is chartered for emergency communications as is
the case with the US service. Nor is the Japanese culture oriented
to volunteerism like the US culture is. From what I've gathered
on the News, Japanese citizens generally wait for the government
to act rather than volunteering their help to strangers. So it
may be true that amateur radio isn't playing as large a part
in the earthquake relief effort as would be the case here in the
US.

Authoritative information would be welcome.

Gary

There were some messages here about the time to get a new license - Here is my data - I upgraded from no-code tech to advanced - I took all of the exams on New Years Eve (12/31/94), from the ARRL VEC in Culver City Ca. The new license arrived yesterday - 1/23/95, and was dated 1/13/95. So call it 2 weeks till the FCC processed the info and another week to get the license back to me in the mail.

Interestingly enough, the "Effective Date" was 1/13/95, but the expiration date remained 12/22/02 - 10 years from the date of my previous (and first) license. Any one have any idea why the expiration date didn't change ?

Thanks and 73's de Dave, kd6pro
(Yes I kept the old call sign - I like being a "pro").

However, 97.405 does not require that "normal communication systems"
(whatever that means) not be available. It seems as though the rules
are less restrictive if you yourself, or another station, are the one
in trouble as opposed to some pour soul you come across who doesn't
happen to qualify as a radio station. (Note: paragraph b doesn't say
"amateur station" or even "licensed station", just "station".)

---
97.405 Station in distress. - (a) No provision of these rules
prevents the use by an amateur station in distress of any means at its
disposal to attract attention, make known its condition and location, and
obtain assistance.

(b) No provision of these rules prevents the use by a
station, in the exceptional circumstances described in paragraph (a) of
this section, of any means of radiocommunications at its disposal to
assist a station in distress.

>idea here is to 'show' a ground rather than let lightning 'find' its
>way to the ground thru your system. So if lightning still strikes, at
>least part of your equipment (and you) will be saved.

Not too scientific indeed. :-)

You're correct that charges in the cloud induce mirror charges in
the Earth below them. But a grounded tower or building serves as
a low impedance path to bring this Earth charge up toward the cloud.
So you're still looking at the same potential, but the insulating air
gap is now slightly shorter. That's why towers and tall buildings are
most often struck, and why they offer a "cone of protection" from
strikes for other shorter structures and objects nearby.

>[They tell you, in case of lightning, your car is a safe place to be.
>Surely, electricity that has travelled hundreds of yards in the air
>is not going to be put off by a few inches of rubber.]

That's true, the tires play no part in the protection offered the
occupants of vehicles. It's the metallic body forming a Faraday
cage around the occupants that offers protection. A totally enclosed
metal cage has zero charge inside even with very high level charges
on the outside. (For static charges, that's actually only perfectly
true for a sphere, but it's true enough for any other shaped closed
metallic container to offer considerable protection. For *RF*, which
lightning is, the skin effect also comes into play and offers those
inside a closed metallic box protection from the currents flowing on
the outside of the box.)

However, your second sentence highlights why we want to ground towers,
antennas, and buildings. When the bolt strikes, we want to direct the
current in a controlled manner to Earth. Depending on a random flashover
path leaves us vulnerable. By providing a good low impedance path for
the strike, we can avoid having the strike flashover to structures,

equipment, or *us* on it's way to ground. And as someone else pointed out, we also need to deal with the induced currents in the antenna from a nearby strike. The ground connection also serves as a controlled path in this case.

In general, we can't *prevent* lightning strikes, all we can do is direct and control the energy in a safe manner.

Some times creativity makes wonders...
If you are in an emergency situation, and need to access someone and no ham repeater or ham is available, put your tie in front of the mike to change your voice and call the emergency services.
When they arrive and they ask you who called them, say "there was a guy here who called you from up there. I dont know who it was, he's left."
The fact is that you have saved someone's life; more important than all the rest combined.

> Regardless of what the law says, local government can and does
>pass RF-related laws, and does enforce them (scanner bans anyone?). Up
>until recently, the FCC hasn't cared about pre-empting local communications
>law. Perhaps this is changing under pressure from the cellular business
>and broadcasters...

Actually, the FCC probably isn't really charged with going after the local laws. Their enforcement power is to enforce the federal law. They can't chase all the county and city councils which may pass inappropriate statutes.

The way the FCC's exclusive authority is typically enforced is:

1. Some local statute conflicts with FCC authority.

2. Some poor guy gets charged with violating that statute.

3. In court the accused (or his attorney) points out that the statute is null and void because it violates the federal law.

4. The court invalidates the local law.

You will notice that the poor guy who was accused has to bear the burden of fighting the local statute in court (possibly through the appeal process). That is a pain in the neck at best and probably costs him a lot of time and money. Everybody benefits, but the guy who fights this through the courts better be prepared to do it right. It will probably cost him much more than the cost of a confiscated radio so some people may just accept the initial local penalty rather than fight it.

It really shouldn't be that way. I wish local officials would be more reasonable. (In fact I wish all government officials would be more reasonable.) Unfortunately in too many cases some jerk thinks he can score political points by passing an illegal statute (or just doesn't know that it is illegal). The only real solution would be for voters to demand competence and fairness from their politicians. Unfortunately I don't see that happening anytime soon, too many people will vote for anyone who promises what they want regardless of the fairness thereof.

For a couple of hundred bucks or less you can get a Heath hw101 which will
get you on 10 - 15 - 20 - 40 & 80 with enough signal to be heard. It is best
to find one localy so you can get someone to help you get started with it.
All the tubes are still readily availble and they are easy to trouble shoot
and fix.

Trying to work ten meters will be pretty frustrating except when it is open
In the summer it will be open many days but the rest of the time will be
hit and miss.

I don't think either the ARRL or K1MAN are out for personal gain. The
operators of W1AW think they are providing a public service, and
to some extent, so does K1MAN, and so do operators who play Newsline
over their repeaters, make club bulletin transmissions, repeat Space
Shuttle audio, or operate traffic nets. All but the last are one-way
transmissions, and according to Part 97 all are legal activities if
they meet certain requirements. All but W1AW and K1MAN's transmissions,
however, are done by operators with *receivers*. That's my complaint
with both W1AW and K1MAN, they don't monitor for a clear frequency
before starting transmission as required in the ARRL Operating Guide
(the "bible" for good operating practices in US amateur radio). This
is especially galling in the case of W1AW since they wrote the book.

Jim,

Please read my posting. I don't think I made an interpetation of it, I
only quoted it. But now that you brought it up, It clearly states that
ANY means of communication is allowed in a life threating situation if
normal communications are available. (Since we're talking Amateur radio
here, I assume any form means, any form when normal Amateur frequencies
are unavailable.) Just a thought. I guess you can read it any way you
like, but if you really want to know e-mail the ARRL and ask for a
clarification.
Les

A while ago (not too long...), the FCC decided to not renew licenses
unless you specifically ask for it. Since you were just upgrading, they
didn't change the expiration date.

They used some exuse of not wanting to do more work, or something like
that. I thought is sounded weird at the time, but oh well...

: Jim

Jim,
The main reason to ground a structure for lightning protection is to control the path the strike energy takes and to prevent it from entering your home. More detailed information appears in the October and December 1994 QST Lab Notes columns on Lightning Protection. Electronic copies of these articles are available from the ARRL Email Information Server (or Info-Server, for short). To retrieve these articles, send an email message to info@arrl.org with any subject (it is ignored) and the following text as the body of your message:

help
index
send lightnin.txt
quit

You will receive both of these articles by email in a few minutes to a few hours (it varies a bit, depending on the mail path). If you have any questions about this service, please direct them to me at the address below.

Best Regards, Michael Tracy, KC1SX, ARRL Technical Information Services

Actually Rob, this is not a problem. The VCO will not lock at that frequency. Although whoever sold you the radio said it would transmit up there, I'm sure Yaseu would never admit that. I did mods on many FT-530's and got so many questions about the TX range, I finally tested one and found that it will indeed transmit to 470 mhz, but the power output drops to milliwatts. The transmitter has a tight passband for the amateur band, and power drops off exponentially outside the band. I should add my discalimer that the radio is not type accepted for operation outside the amateur band. Since I no longer work for Radio City,(quit to go to college) though, I say... Knock yourself out!

Jim N0WMR x - amateur radio tech.
: Make sure you don't have any repeater offset turned on. A little
: experimentation with an FT-530 around here shows that it does transmit,
: unless you have positive repeater offset which causes the TX freq to be
: over 470MHz.

I've got two scanners and a two meter radio for sale.

The Pro 46 is a hand held scanner with 100 channels, 800 Mhz coverage and IS cellular restorable. Great shape - $150.

The Pro 2026 is a mobile scanner with 100 channels, 800 Mhz coverage and IS cellular restorable. Great shape - $160.

The HTX-202 is a two meter radio with all the bells and whistles. CTCSS (subaudible) tone encode and tone squelch. DTMF tones and 5 DTMF memories, 16 frequency memories, etc, etc. MUCH better recieve than on my Yaseu 530! Asking $160.

E-mail me if you are interested in any of the above.

Stewart

It should be fairly obvious to most that Radio Shack is a "closed shop."
Basic policy is that it doesn't say Radio Shack, it doesn't get displayed.

There are exceptions. There are always exceptions. But you have to realize
what is the "normal" before you can make an exception to it.

Remember when they came out with their handheld? A beautiful full size
poster and the only thing the ham community could say about it is that
the frequency displayed was "illegal". Good work boys.

Hi netters, I currently own a Kenwood TH78a which is a great HT. The only, ONLY thing I detest about it is the color scheme of the lettering on the push buttons and the detail lettering for the functions. I can't read them in dim light.. or even decent light without strain... I recently saw a ham with the Yaesu FT-530... It had back lit buttons.... this looked great but I have no idea as to how it might compare with the Kenwood. My TH-78a is an older version ~3yrs old... and I don't know if they fixed this coloring problem or not..might be just me :-)..

Anyhow, to make a long story short... How do you like the 530?????
Has there been a comparison of the two?

>Radio Shack to discuss this matter.

Around here the managers are generally willing to display things like that.
Some even sell bumper sticker for the weather net.

Sounds like the problem is the individual manager. If you try going over the
manager's head, you should probably contact corporate communications at Radio
Shack -- the PR department, in other words.

Good luck!

Best source, Ernie, would be your local radio talking book
service. It probably operates from a nearby public radio
station, the kind that Cute Newt wants to do away with. Almost
all of them use sub-carrier transmission, and would be more
likely to talk to you than SCA users in the commercial
broadcaster area -- you'd be a competitor, right?

897. Make money - this really works

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-24 18:47:51 UTC
From: w5robert@blkbox.com
Message-ID: <wb5crgIsAloser@blkbox.com>
Source record: 253228

INSTRUCTIONS

Follow these instructions EXACTLY, and in 20 to 60 days you will have
received well over $50,000
cash, all yours. This program has remained successful because of the
honesty and integrity of the
participants. Please continue it's success by carefully adhering to the
instructions.

1) Immediately mail $1.00 to the first 5 names listed below starting with
number 1 through number 5.
Send cash only please (total investment $5.00). Enclose a note with each
letter stating: "Please add my
name to your mailing list." (This a legitimate service that you are
requesting and you are paying $1.00
for this service.)

2) Remove that name that appears number 1 on the list. Move the other 9
names up one position.
(Number 2 will become number 1 and number 3 will become number 2...you
get the idea.) Place your
name, address and zip code in the number 10 position.

3) Post the new letter with your name in the number 10 position into 10
(ten) separate bulletin boards in
the message base or to the file section.

4) Within 60 days you will receive over $50,000 in CASH. Keep a copy
of this file for yourself so that
you can use it again and again whenever you need money. As soon as you
mail out these letters you are
automatically in the mail order business and people are sending you $1.00
to be placed on your mailing
list. This list can then be rented to a list broker that can be found in
the Yellow Pages for additional
income on a regular basis. The list will become more valuable as it
grows in size. This is a service. This
is perfectly legal. If you have any doubts, refer to Title 18, Sec. 1302
& 1341 of the postal lottery laws.
Remember as each post is downloaded and the instructions carefully
followed, five members will be
reimbursed for their participation as a List Developer with one dollar
each. Your name will move up the
list geometrically so that when your name reaches the number five position
you will be receiving
thousands of dollars in cash.

To Whom It May Concern,
About six months ago I received the enclosed post in letter form. I
ignored it. I received about five
more of the same letter within the next two weeks. I ignored them also.
Of course, I was tempted to
follow through and dreamed of making thousands, but I was convinced it was
just another gimmick and
could not possibly work. I was wrong! About three weeks later I saw this
same letter posted on a local
bulletin board in Montreal. I liked the idea of giving it a try with my
computer. I didn't expect much
because I figured, if other people were as skeptical as I, they wouldn't
be too quick to part with five

dollars. But, I buy lottery tickets weekly in my province and have nothing to show for it but ticket stubs.
This week I decided to look at this as my weekly lottery purchase. I addressed the envelopes and mailed
out one dollar in each as directed. Two weeks went by and I didn't receive anything in the mail. The
fourth week rolled around and I couldn't believe what happened! I can't say I received $50,000, but it
was well over $35,000! For the first time in ten years I got out of debt. It was great! Of course, it didn't
take me long to go through my earnings so I am using this excellent money opportunity once again.
Follow the instructions and get ready to enjoy. Please send a copy of this letter along with the enclosed
letter so together we can convince people who are skeptical that it really works!

-Good Luck
Charles Kust
St Agathe Que.

Another Letter:

I was working the grave yard shift at the hospital administration office and was bored to tears. I saw
this letter laying on my desk from the previous shift. I had nothing better to do so I figured, Why not? I
ran off over 100 copies on the office copier. I found some blank envelopes in a desk drawer and began to
hand write the addresses from the telephone book. I borrowed the postage meter and stamped the
envelopes. Carefully I stuffed the envelopes not forgetting to put in the five one dollar bills to the first
five names. I put the entire lot in the mail bag. Total time from start to finish was three and one half
hours which included several short stops to answer the telephone and fill out admission slips. Total cost to
me was $5.00. Forty two days later I gave notice to my employer and I will never have to work the night
shift again.

Peggy Lou G.
Scottsdale Arizona

PS. I made a nice size donation to the hospital building fund. I figured it was the least I could do for the
use of the postage and office supplies.

Luck happens when preparation meets opportunity!!!

Another testimonial:

Last week, you were all so hlepful when I had a HD question, so I wanted to reward all of you by letting you in on this deal. I have never heard of this kind of thing before, but seems so easy, I wonder what can possibly fail? I already sent out my money, and I urge you to do so also. I'm going to sen dthis to all the mailing lists that I belong to - the more the better!

That's fine, but one FCC engineer's opinion is not much good when
another engineer cites you.

I personally like to ID every transmitter in a system separately,
so that if one develops a spur then I can figure out which one.
Each link could have a different ID - WA6xyz/L1.../L6, etc.

I ID the links at 1064hz, at about 2 to 3khz dev. Why 1064 hz? Its'
the log center of the gap between the low and high group of touchtone
frequencies and therefore will have minimal impact on downstream
touchtone decoders (Thanks to Allan WA6AWD for the tip).
A simple notch filter based on the toroid from a touchtone pad can take
out the tone in the link receiver audio path - or one can use a filter
of your choice. If you are going to do several link receivers (like for
taking the 1.9kc tone out of a GE voting panel system) the AMI S3526B
filter chip works very well (feed it a crystal freq - one crystal can
feed all the filter chips).

|> top of you if they have met certain conditions, which they
|> have.

What is this "loophole"? One could possibly argue that W1AW and K1MAN are not "intentionally" interfering with your prior use of the frequency, but I would also think that someone could equally argue just the opposite. If no technology existed that prevented them from determining if a frequency was in us before transmitting, then they'd probably be safe. I guess it is sort of like walking into a crowded mall with a machine gun, closing your eyes, and spraying the area with bullets. You might be able to argue that you didn't "intend" to kill anyone since you weren't aiming, but I doubt you'd stand a chance in court with that argument.

|> If they are following the same rules that allow W1AW and
|> K1MAN to do what they are doing, then they are legal, and
|> we can only petition the FCC to change the rules, not to
|> go after the people who are operating within the rules,
|> however much we dislike what they are actually doing.

The rules state they can broadcast under a certain constrained set of conditions. They don't say they can blindly QRM anyone that is on "their" frequency. Just like most radios have VFO's, so do most radios have receivers. Can't they use them?

And finally, please take this to rec.radio.amateur.policy where it belongs.

Maybe I'm a little dense, but just exactly HOW would a station seeking only to RECEIVE another station be committing willfull and malicious interference? I'm a little stuck on this one...

From: jason@fir.canberra.edu.au
Message-ID: <jason.790980000@fir>
Source record: 253243

How is it possible to transmit and receive using spread spectrum, the same centre frequency, same bandwidth, same antenna but different codes? Is it possible at all without blowing up the LNA on the input? Would cancellation of the transmitted signal be practical and relatively simple?

Questions... questions...

ARLB006 Hams aid Japan relief

Hams aid Japan relief

More than 200 amateurs are providing communication in the Kobe, Japan area following an earthquake on January 16 that killed more than 5000 people and left tens of thousands homeless.

Amateur Radio is being used to connect relief centers and to exchange information on road conditions and traffic; the health, welfare, and whereabouts of residents; and the availability of water and food, according to the Japan Amateur Radio League.

The JARL and the Japan Amateur Radio Equipment Industry Association (JAIA) are conducting the effort, at the request of the Ministry of Posts and Telecommunications. 200 hand-held transceivers for 430 and 1260 MHz, as well as three repeater stations, were supplied by JAIA member companies for the operation. Each portable station has been assigned a special call sign -- 8J3AAA, 8J3AAB and so on.

JA3YRL in Kobe serves as communication coordinator, while JA3RL, at the JARL's Osaka office, monitors the activity.

400 of the 600 relief centers (with a total of 240,000 evacuees) are not being served by this communication system, and the JARL is considering equipping at least half of them with amateur stations.

> |______
> ______| S
> | W/4
> |
> | <---W/4
>
>
>Since side S is part of the phasing section it's length is vital.

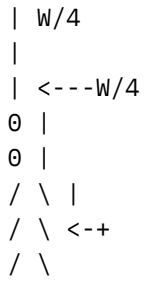
You're right, its length is part of the length of the phasing
section. Since the current flowing through S is not cancelled
by an opposite current, it radiates a small amount of power.
Therefore, is should be as small as possible - less than 0.05W.

The whole phasing section should be tuned for maximum current flow
in S. Or at least for a good match at the feedpoint. And it should
be done in the field. Also, you will probably find that it is
shorter than W/4 when you are done due to fringing capacitance around
the open end.

>How would the performance of this compare to say, a 5/8 wave vertical?
>What's the feedpoint impedence?

You need to feed it against a quarter-wave counterpoise like so:

|
|
| <---W/2 W = wavelength
|
|
|______
______| S



With this arrangement, the feedpoint should be reasonably close
to 50 ohms (SWR < 1.5:1). Gain will be 3 db above a single dipole
and about that over a typical 5/8 wave vertical with a crummy ground.
It would be pretty close to the same as a 5/8-wave over a perfectly
conducting, large-diameter ground.

Phonetic Alphabets (Alpha Bravo etc)

There is a widely known alphabet Alpha Bravo ... Yankee Zulu.
Such alphabets are variously known as phonetic alphabets,
radio alphabets and spelling alphabets. This collection
currently includes alphabets for the following languages:

English, French, German, Dutch, Flemish, Italian,
Rumantsch, Slovak, Polish, Hungarian, Croatian,
Swedish, Finnish, Russian, Chinese and Esperanto.

This posting supersedes the one of 15th December.

Recent new material: Croatian 24 Jan 95
French (Anatole Berthe) 24 Jan 95
Russian (Anna Boris) 15 Dec 94
Esperanto 17 Nov 94

My thanks to the many contributors, not all of whom are
acknowledged below.

I can make no guarantee of accuracy of this information;
indeed please send me any corrections or additions.

In my capacity as the editor of this collection I have no
objection to the further electronic distribution of this
posting in full in circumstances where it is likely to be of
interest.

Comments in square brackets are my own.

Brian Kelk bck1@cl.cam.ac.uk
24 January 1995

***** ENGLISH *****

The NATO phonetic alphabet (as per the Cambridge Encyclopedia
of Language under Seaspeak):

Alpha Bravo Charlie Delta Echo Foxtrot Golf Hotel India
Juliet Kilo Lima Mike November Oscar Papa Quebec Romeo
Sierra Tango Uniform Victor Whiskey Xray Yankee Zulu

[The same alphabet, modulo Alfa and Juliett, is approved by
the International Civil Aviation Organization and the FAA.
The International Telecommunication Union Phonetics list
has: Alfa, Juliette, Oscar/Oskar, Victor/Viktor.

Dates from about 1956.
UK police use Indigo instead of India (?)]

Telecom B:

Alfred Benjamin Charles David Edward Frederick George Harry
Isaac Jack King London Mary Nellie Oliver Peter Queen Robert
Samuel Tommy Uncle Victor William Xray Yellow Zebra

[Found in Swedish, Dutch, Hungarian telephone directories.
A Swiss directory has: Andrew Charlie Lussy Queenie Sugar]

British A:

Amsterdam Baltimore Casablanca Denmark Edison Florida
Gallipoli Havana Italia Jerusalem Kilogramme Liverpool
Madagascar New_York Oslo Paris Quebec Roma Santiago Tripoli
Uppsala Valencia Washington Xantippe Yokohama Zurich

[An 'international' alphabet in a Dutch telephone directory
has: Danemark. A 'French' alphabet in a Hungarian directory
has: Cassablanka Danemark Que'bec Upsala Zu"rich]

Used by police in New York City:

Adam Boy Charlie David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Peter Queen Robert Sam Tom
Union Victor William X-ray Young Zebra

[Variants: Eddie Larry Nancy Thomas Yankee Yellow]

Used by police in Nassau County, Long Island, New York:

Adam Boston Chicago Denver Edward Frank George Henry Ida
John King Lincoln Mary Nancy Ocean Peter Queen Robert Sam
Thomas Union Victor William X-ray Young Zebra

Used by police in San Diego, California:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Queen Robert Sam Tom Unit
Victor William Xray Yellow Zebra

Used by police in Hutchinson, Kansas:

Adam Boy Charles David Edward Frank George Henry Ida John
King Lincoln Mary Nora Ocean Paul Q.. Robert Sam Tom Union
Victor William X-ray Yankee Zebra

Sometimes used by radio hams (unofficial):

America Boston Canada Denmark England France Germany
Honolulu India Japan Kilowatt London Mexico Norway Ontario
or Ocean Pacific Quebec Radio Santiago or Spain Tokyo United
Victoria Washington Xray Yokohama Zanzibar

[Much variation: Amsterdam, Brazil, Baltimore, Chile, Finland, Greece, Guatemala, Hawaii, Italy, Kentucky, Luxembourg, Nicaragua, Portugal, Romania, Sweden, Texas, Uruguay, Venezuela, Whisky, Zulu]

The ARRL (American Radio Relay League) alphabet (1948):

Adam Baker Charlie David Edward Frank George Henry Ida John king Lewis Mary Nancy Otto Peter queen Robert Susan Thomas union Victor William x-ray young zebra

[Nowadays the ARRL endorses the NATO/ICAO alphabet]

Allied Services 1945:

Able Baker Charlie Dog Edward Fox George How Item Jig King Love Mike Nan Oboe Peter Queen Roger Sugar Tape Uncle Victor William X-ray Yoke Zebra

From a book entitled "The Complete Morse Instructor..." (1944):

able baker charlie dog easy fox george how item jig king love mike nan oboe peter queen roger sugar tare uncle victor william x-ray yoke zebra

[The same alphabet is described as "Used by Armed services of USA & GB" in the ARRL 1945 Handbook. Entries cited in variants of this alphabet: affirm, cast, hypo, inter, negat, option, over, prep]

Western Union:

Adams Boston Chicago Denver Easy Frank George Henry Ida John King Lincoln Mary New_York Ocean Peter Queen Roger Sugar Thomas Union Victor William X-ray Young Zero

British Army 1927:

Ack Beer Charlie Don Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pip Queen Robert Sugar Toc Uncle Vic William X-ray Yorker Zebra

Royal Navy 1917:

Apples Butter Charlie Duff Edward Freddy George Harry Ink Johnnie King London Monkey Nuts Orange Pudding Queenie Robert Sugar Tommy Uncle Vinegar Willie Xerxes Yellow Zebra

U.S. Army 1916:

Able Buy Cast Dock Easy Fox George Have Item Jig King Love Mike Nap Opal Pup Quack Rush Sail Tape Unit Vice Watch X-ray Yoke Zed

>traditional AM or FM radio station.

In big cities (top 50 markets), FM stations typically charge
$2000 to $10,000 per month for SCA rights. In a "podunk" market,
you might get away with as little as $500 a month.

Beaulieu is her maiden name, Lu-lu was a childhood nickname. So, it
is probabaly her as she uses her "Presley" name only professionally.

>pve@dg13.cec.be

Hi Peter,

I know of no direct way to send NTS messages via the Internet. However, anyone who wants to send a standard NTS-formatted message to me can do that and I will see that it gets into the NTS from Columbus, Ohio.

Please make sure you follow standard NTS format -- messages no more than 25 words, with proper preamble, full address for addressee (phone number if possible). Local net meets here nightly at 7:15 with liaison to Ohio Single Sideband Net and a couple of CW nets.

73 de Bill, N8POV Central Ohio Traffic Net Manager

[HERE IS THE MESSAGE FORMAT IF YOU NEED IT:]

N T S F O R M A T

105 R (HXG) N8POV ARL 10 Worthington, Ohio (time, optional) Jan 24
Bill Blinn, N8POV
179 Caren Avenue
Worthington, Ohio 43085
614-436-5876 /BT/
ARL FORTY SIX from the
Central Ohio Traffic Net 73 /BT/
Bill, N8POV, COTN Manager /AR/NM/

TOP LINE:
105 - Message number (you assign)
R - indicates routine traffic
HXG - "G" is the default if you specify nothing.
N8POV - Call of originating station
ARL 10 - Message contains "canned" ARRL message, so count is prefaced by "ARL"
Worthington, Ohio - Address of person originating the msessage
Time - If given, use Zulu. Usually omitted on routine messages.
Jan 24 - Date (omit year)

NEXT FOUR LINES: Name, call (optional), address, city, state, zip, phone
/BT/ "BREAK"

BODY OF MESSAGE:
Message should be typed five
words per line X Use
the letter Xray to separate
thoughts X Xray does not
replace periods
/BT/ "BREAK"

Signature - may include address or phone number (these are required if the message is to member of armed forced reachable via MARS).
"Love" or "73" or any other closing belong in the MESSAGE BODY, not in the signature.
/AR/NM/ - End, no more.

Bill Blinn (bblinn@infinet.com) -- N8POV@W8CQK.#CMH.OH.US.NOAM (Ham Radio)

Robert,

A few thoughts:

1. Chain letters are illegal over both internet and US Mail.
2. Next to Amway, they are the fastest way to lose friends.
3. Nobody really sends the money. (I hope you didn't). You just
tack your name at No 10 and lop off No 1. Nobody's the wiser, right!.

Aditya

919. Re: K1MAN

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-25 00:07:59 UTC
From: aswNS@hamp.hampshire.edu
Message-ID: <3g44ov$bhi@gort.oit.umass.edu>
Source record: 253251

I don't particularly make a point of listening to K1MAN these days, but the times I have listened to it I haven't heard anything obnoxious. The production values are different from W1AW, but that doesn't bother me.

In 1993 when I was working in another country for most of the year I actually did search out K1MAN from time to time. My ham magazines were only sporadically forwarded to me, I didn't have access to net news and my schedule and propagation didn't co-operate well enough for me to catch W1AW bulletins regularly. The K1MAN broadcasts were interesting and useful for me at the time.

I've been an ARRL member for a long time and I don't have anything against the League, but I don't think it does the League any harm to have someone else doing some of what they do in a different way. And one of the things that I fear could happen is that people who get upset about K1MAN and cry out for new rules that would make his operation impossible would get rules that would also restrict W1AW's valuable services. That sort of thing has happened before.

In general I think ham radio would fulfill its purposes better if there were fewer amateur lawyers trying to prevent people from doing things differently and more experimenters doing them. I'm not saying K1MAN's experiment is a worthwhile one, but I don't think it does any harm.

If there only two other hams with kilowatt rigs listening to K1MAN instead of transmitting you have to conclude that he is reducing QRM.

921. Mobile installation: why 2 fuses?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-25 00:12:24 UTC
From: aswNS@hamp.hampshire.edu
Message-ID: <3g4518$bhi@gort.oit.umass.edu>
Source record: 253259

I have often read recommendations that mobile equipment be installed with two power leads direct to the battery positive and negative terminals, and that both leads be fused near the battery.

I have never understood the logic of the fuse in the negative lead. It tends to presented as revealed truth. Can sometime justify it?

Well, other than the blank items (excluding the .sig), I think I get
the jest of your message from your subject line.

Amateur Radio on seagoing ships depends on the ships registry.
If the ship is a US registered or Canadian registered (unlikely),
you can transmit on any and all frequencies allowed to you by
your amateur radio license.

However, if the ship is registered in a country other than a US or
Canadian, then you will need to contact the country's consulate or
the ARRL for information on getting a recriprocal license to use
your amateur gear. The way this works out is that a ship that is
registered in "X" country is equivalent to a piece of that country on
the sea. You then are bound by that country's and specifically the
captain's rules.

Enjoy !

Well, congrats on getting your CSCE on the morse. I'm sure you'll enjoy it.
However, I tend to disagree with you. I've had my call for over a year now,
and I'm frantically trying to get my WAS on 6 meter before I move ! I'm down
to only 10 states left, and that's pretty darned good in my book.

Since I've gotten my ticket, I've enjoyed the fact that I can talk to someone
else, even if it is voice, and that the people on the other end of the mikes
love getting a new contact as much as I do. Don't kill my hit parade just
because you wanted to get your code portion and I want to get my WAS.

James,
I've done this with a pro-43 scanner, a kpc3, htx-20 and a mac.
The only thing I did different from my regular 2way packet setup
was that I didn't plug in the mic plug only the speaker plug.
You could get/make a PMP (poor man's packet or equiv) for either
a Mac or PC system (different kits for each platform) About $50 or so.
A KPC-3 costs about $115 mail order, less used.
Enjoy,
Jeff N2TIQ

>a line.
I gather since you are logging into the USENET from xmission.com,
you're probably in Utah.

The Amateur Radio Clubs here in Phoenix, AZ tend to use people
involved in either the electronics industry (getting someone from
Motorola to demo GPS, for example), local public figures that happen
to also be amateurs (Senator Barry Goldwater, for us), or other
media darlings.....

It might be a good experience for you to try and get media darlings that
don't have tickets. Our County Sheriff, Sheriff Joe Arpaio, is now becoming
interested in getting his ticket, along with a few Chiefs of the Sheriff's Dept !

Enjoy !

Why? I am perfectly happy with 2m and 70cm and in the future I plan on buying a TNC for packet. Why force somone to move up to another class of license when they don't want to. Why FORCE someone to learn CW when they don't want to?

The best part of ham radio is that there is something for everyone: FM, CW, SSB, ATV, Packet, RTTY, etc.

What we offer on the Internet is "A FREE HAM NEWSLETTER" and nothing
more. The purpose of the newsletter is to inform the interested
Amateur Radio public that our product will provide them with useful
information about the hobby of Amateur Radio. The decision for
another individual on the Internet to receive a NEWSLETTER is the
readers decision, not yours. My post gives the reader the choice
if they wish to continue by requesting our newsletter. In the case
of yourself, you did not need to respond.

The ease of posting Usenet News articles causes many inappropriate
articles to be sent to the network.
An article can be inappropriate if it:

-- Is devoid of useful information or ideas.
-- Is sent to inappropriate newsgroup(s).
-- Is really intended for a particular individual,
rather than the entire Usenet community.
-- Contains rude or insulting remarks.

Articles should be composed thoughtfully. Consider sending an
electronic mail message rather than posting an article, if
appropriate. Be aware of the fact that many sites must pay long-
distance telephone charges to receive your article. Also be aware

of the fact that some of the popular newsgroups have tens of thousands of readers. 10,000 people each reading your article for 20 seconds spend a total of 55 hours reading your article. At the end of most articles there is usually a small blurb called a signature or sig. This usually comes from a file in the person's login directory and is appended automatically to the message by the news reader. Some people get carried away with their signature and place complex ASCII drawings or cute sayings at the bottom of their messages. These signatures bother most people and it is considered poor "netiquette" to ave signatures larger than about 4 lines. Please remember to save your signature file as plain ASCII text, since vendor dependent binary files (such as Microsoft Word files) are not portable across the entire Internet community.

Many new users wish to test their ability to post before they actually say anything of any interest to anyone. Don't post test type messages to an active newsgroup. This will interrupt quite a number of people and is considered poor "netiquette". There are usually a number of "Test" newsgroups (they usually have the word "TEST" in their name) that can be used to verify that posting from your host will be successful. Some test newsgroups (like ALT.TEST) have automatic E-Mail responding software. A post to those groups will cause electronic mail from all over the world to be sent back to you as your post gets forwarded from site to site.

The "Newsgroups:" line in a news header isn't limited to just one group. If a note makes sense to more than one area you can cross-post it to other newsgroups by just separating the newsgroups with a comma on the Newsgroups line. It is considered poor "netiquette" to cross-post to more than several newsgroups.

When posting new articles to News, please remember that News runs on many different hosts and operating systems. The majority of posts from the Usenet are viewed by people running non-DOS/Windows operating systems. Inserting graphics or non ASCII text (such as different fonts, underlining, color changes etc.) in an article will appear as unintelligible garbage to almost everyone else. When responding to articles, use the Follow-up Article option instead of the New Post option. This will maintain a reference link between your message and the article you were reading at the time of your posting. People reading your message from other "thread based" news readers, will be able to understand how your message fits into the rest of the conversation. Intersperse your comments between the quoted text and delete any large quoted sections that do not pertain to your response. Someone can always find the original text by clicking on the unique Message ID. Also, use Message ID's when referring to other articles and never refer to another article by it's article number. Article Numbers are never the same from system to system so only people reading news on your own local system will know to which article you are referring.

Try to keep your text in a generic format. Many (if not most) of the people reading Usenet do so from 80 column terminals or from work-stations with 80 column terminal windows. Try to keep your lines of text to less than 80 characters for optimal readability. If people quote part of your article in a follow-up, each line gets indented a few characters and gets proceeded with a ">". Thus, standard lines of 75 characters or less are best for later readability. Be careful when using proportional style fonts since they allow you to place more characters per line than fixed style fonts.

Last but not least BOB, your suggestion that persons should be asked to CRASH MAILERS WITH ELECTRONIC FECAL MATTER will be met with a strong challenge here at EPIX.NET!
Should such an occourence happen we will refer the matter directly to your commander, you are under the Uniform Code of Military Justice!
Furthermore any damages caused by your suggestion will be dealt with in a court of Civil Law.

932. NYC Amateur Emergency Radio

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-25 02:20:20 UTC
From: clay@panix.com
Message-ID: <3g4ch4$hr1@panix.com>
Source record: 253271
Cross-posted to: rec.radio.amateur.misc,nyc.general

New York City Amateur Radio has two emergency radio nets:

ARES-Net on NYC-ARES TAC-1 (147.2700 MHz)
Simulated Emergency Network (147.3600 MHz)

The NYC ARES organization was recently portrayed in an article in QST and is steadily growing and becoming more active in the NYC community.

The Simulated Emergency Network provides an excellent opportunity to practice your emergency handling skills. You can join experienced amateur emergency service operators to discuss and practice message handling on the air.

Participants in both nets played roles in coordinated emergency drills with local and federal government organizations this summer. I encourage NYC hams to take part in these nets.

>Maybe I'm a little dense, but just exactly HOW would a station seeking only to
>RECEIVE another station be committing willfull and malicious interference?
>I'm a little stuck on this one...

Not to mention that nobody has even proven that K1MAN's transmissions are
even malicious interference. The entire complaint is centered around
someone's claim that the frequency is "theirs" because they have a net
there and their net shouldn't "have to move".

K1MAN's actions may be obnoxious, but illegal? That's a tough call.
Maybe if the net moved, and he moved with them, that would be
malicious, but there hasn't been any claim to that at all.

Subject: Vanity Call Sign News Release

Late breaking news!
-- Bart Jahnke, KB9NM, ARRL/VEC

FCC NEWS

Report No. DC95-19 ACTION IN DOCKET CASE January 24, 1995

COMMISSION AMENDS AMATEUR SERVICE RULES TO IMPLEMENT
A VANITY CALL SIGN SYSTEM
(PR DOCKET NO. 93-305)

In recognition of the strong sense of identity among amateur operators that is grounded in the call signs of their stations, the Commission has decided to offer a vanity call sign system to the amateur service community. The Commission will also resume issuing new club and military recreation station licenses. The Commission said these actions are fundamental to its commitment to putting the needs of people first in providing the services that they want.

Each new amateur station licensed by the FCC is assigned a unique call sign. An automated process selects the call sign in accordance with the sequential call sign system. Until recently, the Commission was unable to accommodate the many thousands of requests for call signs of the licensee's choice. The Commission stated that one of its many steps in reinventing Government is to implement new licensing processing capabilities that make it practicable to grant such requests.

The Commission will implement the new system by using a series of four "starting gates." Gate One would allow a previous holder of a call sign to apply for that call sign or, where the holder is deceased, a close relative could apply. Gate Two would allow the 66,000 Amateur Extra Class operators, who have passed the most difficult license examinations, to apply. Gate Three would allow the 112,000 Advanced Class operators, who have passed the second most difficult license examinations, to apply; and Gate Four would open the system to any licensee, including a club station license trustee applying for the call sign of a deceased former holder. The Commission will announce the opening of each gate by a Public Notice. The first gate will

open as soon as the new application form, FCC Form 610-V, is available and the Commission's licensing facility is prepared to begin procesing the applications.

With respect to new club station licenses, the Commission stated that persons not already holding a club station license must first apply for and receive a license before filing an application with the fee collection contractor requesting that the license be modified to show a vanity call sign. However, the Commission will begin accepting applications for new club and military recreation station licenses on the date the Report and Order in this proceeding becomes effective.

Action by the Commission December 23, 1994, by Report and Order (FCC 94-343). Chairman Hundt, Commissioners, Quello, Barrett, Ness, and Chong.

Al, current flows from negative to positive, a commonly overlooked fact.
fusing the B+ lead protects the lead from shorting to the chassis and
starting a fire. The fused ground lead protects the equipment.

Sure, this is easy. Imagine that BIG strap connecting the negative terminal of your battery to the engine block becoming corroded, or even falling off. Now when you go to start your car, the current from the starter tries to go thru your nice black negative lead to the radio. It then goes thru the radio chassis, and seeks ground either via the radio bracket (if its grounded to a metal part of the car), or thru the RG58U coax braid to the antenna ground. Fifty to a hundred amps thru this circuit is likely to make smoke, hence the smoke-reducing fuse.

>73, Al N1AW

I don't think so. The "hot" lead (positive in most modern
vehicles) should always be fused. The "ground"lead (the
opposite) never. No two fuses are identical, if both
leads are fused, the "ground"lead can open leaving a
voltage on the chassis and components and allow further
damage by inadvertant grounding.

Additionaly, while 12 volts is generaly harmless to
humans, trying this with a high voltage system could
be deadly.

K1MAN is an ego-maniac and should be run off the bands, but all the specious arguments in this thread miss the point. It is simply that his "broadcasts" go beyond Webster's definition of "bulletin" and FCC regulations regarding amateur-related content. All other aspects of this sickness are legal, if nauseating.

Complain like hell to the FCC, but _do not_ bother federal legislators.

The worst thing you can do is to connect the rig direct to the battery terminals; but in case you do, then the -ve lead is fused for safety. The -ve lead normally goes to the chassis, ideally close to where the engine itself is grounded.

Simplistic reason: when the starter turns, it draws a heck of a lot of current. This causes voltage drops, right? Most particularly in the leads from the battery to the starter... Now, by some mechanism I've unfortunately forgotten, you can get a big enough potential difference between "true" earth (the chassis) and battery -ve to blow the tracks off your PCBs (it's a low-resistance path, and it doesn't take much in the way of volts to draw heavy current)...

Steve Yee (sgyee@ramp.com) wrote:

: Amateur Radio on seagoing ships depends on the ships registry.
: If the ship is a US registered or Canadian registered (unlikely),
: you can transmit on any and all frequencies allowed to you by
: your amateur radio license.

: However, if the ship is registered in a country other than a US or
: Canadian, then you will need to contact the country's consulate or
: the ARRL for information on getting a recriprocal license to use
: your amateur gear. The way this works out is that a ship that is
: registered in "X" country is equivalent to a piece of that country on
: the sea. You then are bound by that country's and specifically the
: captain's rules.

I have a different understanding based on some material I received from ARRL when I was preparing for a trip to the Bahamas. If the ship is US registry, you are able to transmit on all freq.s covered by your license while in the US territorial waters, and in International waters. You must obey the rules of the specific ITU region you are in when broadcasting in Int'l waters however. When your ship enters the territorial waters of another country, you must obey their laws, and probably need a temporary operating permit from that country.

I am not sure what the rules are when operating on a foreign flag vessel. The poster is correct in saying that you should check with the captain before transmitting...

>>I, too, saw the article in the Albuquerque Journal. It came from the
>>Knight-Ridder News Service and probably appeared originally in the
>>Philadelphia Inquirer. The offensive part of the quote was comparing
>>Internet communication to Ham Radio "in the old days."

I didn't see this article, but if that's the most "offensive" part of the article, I don't see how it's offensive. It's simply a fact that in an emergency people will try to communicate. In last year's California earthquake, the Internet served as a major route for messages.

Computers and the Internet continue to function only when they have electricity and hard-wire lines (excepting the occasional cel-tel link, of course), so the Internet might not work so well in a widespread disaster.

I'm a local NTS net manager who's committed to emergency traffic handling, but I also understand that technology moves on. If the Internet is available in an emergency, it might be a better and faster servant. But we can't assume it will be there.

If you read the article in question and you disagree with it, I recommend writing a FRIENDLY letter to Knight-Ridder EXPLAINING your point of view. The error, if there was one, doubtless came from a LACK OF INFORMATION and not from any ANTI-HAM BIAS.

I am also a member of the dreaded news media and can tell you that good reporters appreciate hearing from people with information. But as most of us are at least partially human, we rarely enjoy being flamed.

On All Kinds of Dates
All Kinds of Folks have made interpretations and wrote about

>FCC rules part 97.403
>Safety of life and protection of property.

>No provision of these rules prevents the use by an amateur station of any
>means of radiocommunication at it's disposal to provide essential
>communication needs in connection with the immediate safety of human life
>and immediate protection of property when normal communication systems
>are not available.

Well, I just can't control myself anymore. So here's my reading and
interpretation.

FORMAT: "Given
My interpretation

1. "No provision of these rules prevents the use by an amateur station
This section stands alone and amateur stations may use . . .

2. of any means of radiocommunication
Any mode (AM, FM, SSB, CW, FSK, ATV, etc.)

3. at it's disposal
On any Amatuer radio frequencies

4. to provide essential communication needs

We will carry essential communicatios

5. in connection with the immediate safety of human life and immediate
protection of property
To protect life and property

6. when normal communication systems are not available.
Then other communication systems die.

So reworded,

This section stands alone and amateur stations may use any mode (AM,
FM, SSB, CW, FSK, ATV, etc.) on any Amatuer radio frequencies we
will carry essential communications to protect life and property when
other communication systems die.

Boy I'm lost - to me this means that we provide service to other services;
not others for us!

The rub is that FCC believes that only amatuer frequecies are at our disposal, see line 3 above.

>licensed calls are authorized to use my link?

Only the FCC can assign callsigns. The station license you were issued by the FCC has the only callsign on it that you can use to identify your station(s). When you are licensed, you are given two grants on one piece of paper, a station license with it's associated callsign, and an operator license (97.17b). The operator license has no associated callsign. So, for example, I'm an Advanced Class operator and I can establish amateur stations with the station callsign of KE4ZV. *I* am not KE4ZV, but my station is. This used to be clearer when the FCC would issue separate operator and station license documents.

In a continuing effort to be responsive to the needs of our amateur
radio customers, Guineacrafters, Inc., is proud to make available a
new product to the amateur community.

Hindenberg Hardline

Hindenberg hardline is ideally constructed for low-loss applications
requiring pressurized hardline. Filled with a gaseous hydrogen dialectric
and equipped with a special aluminum center conducter designed to
minimize lossy arcing, Hindenberg Hardline exhibits attenuation
characteristics that blow even Andrew Heliax away. All this for just
pennies more than Belden 9913 prices!

Specs and pricing are as follows

db loss per 100' @ Price
Item # Diam. 145 220 440mhz per ft.*

BFB-500 1/2" 0.9 1.1 1.5 0.75
BFB-625 5/8" 0.7 0.9 1.3 0.85
BFB-875 7/8" 0.5 0.7 1.1 1.00
BFB-1000 1.0" 0.3 0.5 0.9 1.25

*=hydrogen not included

ARLB007 Vanity calls soon

ZCZC AG73
QST de W1AW
ARRL Bulletin 7 ARLB007
From ARRL Headquarters
Newington CT January 25, 1995
To all radio amateurs

SB QST ARL ARLB007
ARLB007 Vanity calls soon

The FCC has announced its intention to implement a vanity call sign program, and also to resume the issuance of club and military recreation station licenses. In a January 24 news release, the Commission released a general outline of the new program.

Amateurs will be eligible to apply for a call sign of their choice in four ''gates.'' The first group eligible to apply will be previous holders of a call sign or the close relative of a previous holder of an amateur call sign who is deceased. The second group will be Amateur Extra Class licensees, then Advanced, then all others. The FCC will announce the opening of each ''gate'' by public notice.

The FCC said that the first gate will open as soon as a new application form, FCC Form 610-V, is available and the Commission's licensing facility is prepared to begin processing the applications -- no sooner than April, according to FCC staff. Applications for club station licenses will be accepted as soon as the FCC's Report and Order on this matter is released. Club station call signs will be issued systematically, unless under the fourth ''gate'' the trustee of an existing club station applies for the call sign of a deceased member as a vanity call sign for the club.

The fee for the use of vanity call signs will be 7 dollar(s) per year, or 70 for dollar(s) a ten-year license term, according to Wireless Telecommunication Bureau staff. However, on January 12, 1995, in a notice of proposed rule making, the FCC proposed a fee of 3 dollar(s) per year, for fiscal year 1995 (which began October 1, 1994).

Amateurs will be able to list up to 25 call sign choices, from any call area, FCC staff said. It is expected that it will be several weeks before the new form 610-V is approved.

More information was in July 1994 QST, page 84; June QST, page 81;
and February QST, page 84. (PR Docket 93-305).

You don't really even need software. A terminal program will work fine.
You can copy packet with a scanner, but you do need a tnc, that is a
definite, there is no other way to change the analog audio to a digital
form for the computer. They do have simple TNCs that fit in a DB25
connection and the software does the work.
Hope that helped some..

However, if your antenna is grounded to the chassis, won't the current
attempt to flow to ground that way if the fuse on the negative lead
blows first? I would think that would be more damaging.

It's unlikely that both fuses would blow simultaneously if a short
occurs - fuses of the same rating have minor variations and one is
bound to be weaker than the other.

I *knew* my Larsen thru-glass antenna had an advantage - no DC
ground path if you lose the radio's ground. :-)

Someone else mentioned the possibility of the car's grounding strap
[from battery (-) to chassis] failing, causing starter current to flow
through the radio's grounding wire. Personally I worry more about
meteors hitting me on the head, but a fuse of, say, 50% higher capacity
than the B+ fuse would cure this problem and avoid the possibility of
the ground-side fuse blowing first (unless your Big Ass(tm) amplifier
requires 4ga wire already, they you probably *could* handle starter
current on your rig's wiring!)

There is a Technical Service Bulletin from Chrysler regarding the
installation of transmitters in Jeeps. It specifically says NOT to fuse
the ground lead at the battery. The service manager told me that there is
some possibilities of blowing some electronic modules if the ground fuse
blows and those modules would not be covered by Chrysler.

>Where does it say that in the rules? It sounds purely like a personal
>translation that every radio involved in a repeater system is part
>of the repeater. That would also mean that someone who sets up a
>crossband repeater between a simplex and repeater frequency would
>become an entity of that repeater system if the rules were written
>as you state and it would require an ID of the repeater system.

97.201(d) "An auxillary station may be automatically controlled only
when it is part of a system that includes a repeater station also being
automatically controlled."

97.5(d)(1) "..... A primary station license is issued only to
a person, together with an operator license on the same document. Every
amateur operator licensed by the FCC must have one, but only one, primary
station license."

(Call signs are issued to *stations* not to persons. Your operator's
license doesn't have a call sign, but your primary station license does.)

97.119(a) "Each amateur station, except a space station or telecommand
station, must transmit its assigned call sign on its transmitting channel
at the end of each communication, and at least every 10 minutes during
a communication, for the purpose of clearly making the source of the
transmissions from the station known to those receiving the transmissions.
No station may transmit unidentified communications or signals, or transmit
as the station call sign, any call sign not authorized to the station."

As you can see, 97.119(a) requires that the call sign of the *station*
must be given for each transmitted signal. The station call sign that
must be given is the primary station call sign of the licensee of that
station, not some control operator's station call sign. To operate under
automatic control, links, which are classified as auxillary operation,
must be part of the repeater system, thus they have to have the same
primary station call sign as that on the repeater.

Anyone setting up a crossband repeater between a simplex subband and
a repeater subband would be in violation of 97.205(b) since both

frequencies involved must be in authorized repeater subbands, not on simplex frequencies. Aside from that, however, the crossband repeater is not a link operating under the auxillary rules with regard to the other repeater. It is a standalone repeater operating out of band plan that happens to have an output falling on the other repeater's input frequency. It must ID *all* of its transmissions (both bands) with the call sign of the licensee of the station according to 97.119(a). (None of the current crop of dual banders will do this when operated in cross band repeater mode, and are thus illegal without some extra identification means.)

>Most people are just used to thinking of the repeater system as
>a whole, but the FCC doesn't think that way when you give them
>a call and ask them. Each link is considered a different station
>and not treated as a whole system.

If they don't treat the links as part of the system, then the links are illegal, since automatically controlled links can only operate as part of an automatically controlled repeater system. Even supposing they would treat all the transmitters as separate, they must all be IDed with the primary station call sign of the licensee. In other words, the owner of the equipment has to use *his* primary station call sign on any and all transmitters that are part of his repeater station system. *User* stations aren't part of the repeater station system, only the repeater station and it's associated auxillaries are part of the system as per 97.113(f).

>This is the same sitiuation in
>packet where someone has a system at home and one at a remote
>somewhere that is linked to their own system. Each one is a seperate
>system and not treated as a whole.

But both must be IDed with *his* primary station call sign, not with some *other* licensee's primary station call sign. That would violate 97.119(a). That's true with the links too, they have to be IDed with the primary station call sign of the licensee of the links.

>When a user transmits they
>are the one that is controlling the remote link transmitter to
>be enabled. By not transmitting the link is shut off. The rules
>are very simple to accomodate situations such as this.

The rules are clear, a control operator must exercise either local or remote positive control. Remote control via amateur radio can only be done by a station operating in auxillary operation. Auxillary operation is prohibited below 222 MHz. Thus, the two meter user *cannot* act as the control operator for the link transmitter, or repeater. Besides that, 97.103 requires that the active control operator of any station must be indicated in that station's records. Unless the station licensee is standing by and scribbling down each user's name in turn in the station records each time before letting them be control operators, the licensee is in violation of 97.103. And further, the user is no more

sending telecommands to the link than he is to a repeater he kerchunks. The link is operating under the automatic control of its COR or CTCSS decoder, not under manual control of the user.

And besides all that, an auxillary or repeater station's callsign does not change when the station licensee authorizes another amateur operator to be control operator. A licensee must *transfer* the station to the other operator for that other operator to legally use his own primary station call sign on it.

>On a different note, have you tried the idea of filtering out
>an ID at the main site if you do ID at a higher audio frequency?
>Just wondering how it would really work (sounds good, but things
>never seem to be easy to get working :-) If in doubt as to
>the rules you can always ID to be on the safe side just in case
>they a new lawyer comes in who translates it differently. I'd like
>to know of a decent way too.

Sure, works fine. It's essentially the same system used commerically on GE pilot tone systems.

>a line.

Been there. Done that.

Ideas:

Local radio/TV stations _love_ the opportunity for public relations
trips: assuming your group is large enough; also helps if it is a
"special event" meeting (rather than normal club business meeting).
Weather-persons, especially if Storm-Track/WEather-watch/NWS etc.,
like to keep up good relationships with hams. You'd be amazed at how
many stations regularly monitor amateur weather/emergency nets.
BTW: you can even schedule engineering visits with stations.

Other clubs: great for exchange of programs, even entire meetings.
Produce a good slide-show of your most recent Big Club Doings and
present it to them and ask them to do the same for you. Also, they
can put you onto speakers they have (and haven't) liked.

Community services: sheriff's office, police department, emergency
planning group, engineering department of local colleges, etc. are
all rich sources of speakers.

Your own club members! One of our best speakers (we asked him to do
it more than once) was a local who did DXCC in what was believed to
be the shortest time ever. His simple methods of getting QSL cards
was a great topic spiced with personal anedotes. Another member was
a great designer and produced kits part-time: his display and the
discussion of the differences amoung kits and designs was always a
great draw. Another guy was with the electric company: talk about
an intimate knowledge of grounding, etc.! (BTW it goes without saying
that it is best if you know these guys and how they relate to groups:
the XYZ expert may know his material but be certain to put everyone
to sleep!)

Good luck!

> Max George AB7GM es 73!

One of the most interesting club meetings we've had to date occured when we had the local power company come in and talk about tower grounding. Sure made a lot of people rethink their situation. Especially after one of our members took a direct strike on his antenna and he basically had to rewire his house, buy all new electronic appliances, and get all his radios fixed. It was a truly tragic tale.

We also had a military person come in and talk about radio direction finding. He had some interesting "Cold War" stories.

We had some representative from the FCC come in a couple months ago.

I'm sure there are a ton of other good ideas.

Leave me a note and we can put our heads together.

I have the 530 and the 78a. The 530 has backlit keys so you can see the numbers on the keys in dim or no light. The 78a has edge-lit keys which do not illuminate the key numbers. This makes it much harder to read. Also, the 530's keys are twice as large, making them easier to read and to press. The 530 wins hands-down in the area of keyboards.

My 78a is a year old.

<SNIP>
: There is a Technical Service Bulletin from Chrysler regarding the
: installation of transmitters in Jeeps. It specifically says NOT to fuse
: the ground lead at the battery. The service manager told me that there is
: some possibilities of blowing some electronic modules if the ground fuse
: blows and those modules would not be covered by Chrysler.

That is interesting, I own a jeep (wrangler) and my question would be
how in the world would they know, assuming you disconnect the radio wires
before taking it into the shop? And for that matter why would a blown
fuse on a direct line to a radio cause electronic modules to blow. Seems
to me if you have a fuse blow in the line to the radio there would
probably be more to worry about than the modules. I have been using
a Kenwood TM241 directly wired to battery for about 2 years on a
almost daily basis including running it at 50 watts when doing
severe weather watching and have never had a problem with the exception
of the battery acid eating the plastic case that holds the fuse.

>Although I agree that the radio was taken illegally, Part 97 is not the
>instrument (the paragraph you cited) that allows a person to use any
>means of communications in another service.

[snip]

It certainly does apply. It applies to the use of an amateur station. If such a station is capable, under the described conditions, of communications outside the amateur sevice, those communications are permitted under the above paragraph (97.403). In addtion, a station is distress can use ANY MEANS AT ITS DISPOSAL to attract attention, make known its condition and location, and obtain assistance - refer to 97.405. In other words, if my equipment provides out the ordinary capability, I am allowed to use it when ordinary means don't work.

However, in my situation, I would likely look for a system operated by my employer before I surprised a sheriff dispatcher. But my knowledge of other commercial systems put other means "at my disposal". Still, use of my amateur equipment on petroleum or business services would subject to the conditions of 97.403/405.

The purpose of these paragraphs is to cover just such an incident as occured in southern California.

Does this mean we don't need a fuse on the +ve side? ;-)

Sean, that current flow is a matter of semantics. Current flows from
+ve to -ve, *electronic* current flows from -ve to +ve. Basically ,
current flows *whenever* there is a difference of potential (voltage).
So if either +ve or -ve find a path to the ground, current will flow.
In the -ve terminal case (conventional) current will flow *from* the
ground into the -ve.

980. Ni-Cd "memory effect" -- how to correct?

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-25 20:04:45 UTC
From: steve@ichips.intel.com
Message-ID: <steve.791064285@ichips.intel.com>
Source record: 253108

I have a Yaesu FT-411E HT which is having a problem with the new battery pack I recently purchased. From a full charge, the radio only operates for a fairly short time (way too short) before running out of power. I'm suspecting this may be the "memory effect" Ni-Cd batteries can have, if they are not allowed to drain empty before recharging.

I seem to recall a circuit that could be built to "zap" or "condition" Ni-Cd batteries which were in this state, so that they would take a full charge once again.

If anyone has information on how this could be done, either with a commercial product or (preferably) a do-it-yourself circuit, it would be much appreciated.

thanks in advance,

Steve

: >I have never understood the logic of the fuse in the negative lead. It
: >tends to presented as revealed truth. Can sometime justify it?

: I don't think so. The "hot" lead (positive in most modern
: vehicles) should always be fused. The "ground"lead (the
: opposite) never.

No, no! Here's the scoop:

1) If the negative lead is connected to the battery post, it must be fused.
2) If the negative lead is connected to the car chassis, don't fuse it.

The reason for 1) is that if the battery ground strap becomes
disconnected, the starter current tries to return via the radio chassis
and radio negative power supply lead. That will instantly vaporise the
supply lead, causing a fire hazard.

I would guess they mean not to fuse the lead from the battery to the
body of the car. I doubt they are concerned about the ground lead of
accessory equipment.

I kind of like mine. It's a palindrome (sp?), ignoring the spaces, of course.
Has a real nice rhythm.

From: jdevenport@lanl.gov
Message-ID: <3g6mk0$7fv@newshost.lanl.gov>
Source record: 253047

I have tried unsuccessfully, repeatedly, to get BAYCOM 1.5 to run from
a Windows icon. The serial port interrupts seem to be the problem. It
will not decode packets and when transmitting (from Windows) the data
bursts sound slow and confused and distorted, so evidently the serial
port is being interrupted for windows refreshes which defeats successful
packet transmission and reception.
The baycom system works fine IF I first exit windows completely and run
baycom solely from DOS.
Is there a way to make it work under Windows?
Thanks, de Jim WB5AOX

996. New Zealand operation

ANNOUNCEMENT: New Mail Order Catalog Available

Electronic Materials and Computers, and Maryvale Engineering
Company have joined forces are are preparing to print their
first joint mail order catalog. Products from both company's
will be covered in the catalog, but orders will be processed
by EM&C.

Products include:

New and surplus computer hardware
New and surplus electronic components
New networking and computer supplies
Kits, Grab-bags, Tools, Power suppliesl
All manner of misc.

Also featured in this first catalog will be the data sheets
for both the HM2007 Voice Recognition IC, and the MC145447
Caller I.D. Receiver I.C.

TO RECEIVE A FREE COPY OF THE CATALOG.....

James Ganyard (jdgan@symnet.net) recently wrote in <3g1q6v$qte@core.symnet.net>:

: Is there any way to copy packet with a scanner? I would like to try using
: a Bearcat100xlt and a IBM PC Convertible laptop.
: I know I'll need some packet software but is a TNC really mandatory for
: recieve only?

The TNC is a modem. You will need one to demodulate the signals heard on the radio. Multi-mode TNCs are used to demodulate the rtty, sitor, fax and other digital modes found on the short wave bands. Many short wave listeners and scanner enthusiasts use TNCs to listen in on all kinds of digital traffic. There are some software emulations but they do not offer the versitility of a good hardware TNC.

1000. AR1000XLT hacking advice

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-26 01:09:09 UTC
From: erikw@bat.engr.sgi.com
Message-ID: <3g6snl$pmj@fido.asd.sgi.com>
Source record: 253035
Cross-posted to: rec.radio.amateur.misc,rec.radio.scanner,alt.radio.scanner,rec.radio.amateur.equipment

So I recently picked up a used AR1000XLT that i found in the paper. After some stomping of feet, pulling of hair, and cursing the human factors group at AOR, i think i am finally getting the hang of the, so called "User Interface". Being a Hardware guy i couldn't resist the opportunity to take it apart and have a look. Not to many surprises really, except one, the scanner is controlled by a 4 bit processor which has a serial port. It's a uPD75308GF made by NEC with an 8kB external ROM. So i am wondering if anyone has been successful at interfaceing to it. It sure wound be allot simpler to program those 1000 channels using my computer. Any takers?
I would also appreciate any "scanner tricks" advice from you AR1000 experts out there, like how to scan arbitrary banks, unlock a bank with out unlocking all locked channels first, jump through hoops.

1003. Re: AMSOFT advertising on 'net

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-26 02:35:57 UTC
From: gbrown@unlinfo.unl.edu
Message-ID: <3g71qe$hc5@crcnis3.unl.edu>
Source record: 253088
Cross-posted to: rec.radio.amateur.space,rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.amateur.homebrew,rec.radio.amateur.equipment,rec.radio.amate

I find your (AMSOFT) reply as innappropriate, perhaps more innappropriate, than Bob's comments, and a substantial waste of "bandwidth".

Perhaps what Bob should have said is that it is contrary to Internet's policy for Internet to be used as a vehicle for commercial advertisement. That is a fact. While I can not say that the policy is a legally binding one (that is for others to say), it certainly is followed by the vast majority of commercial enterprises, and for good reason. They realize that they run the risk of alienating potential customers who may not appreciate such a blatant disregard for net etiquette and policy. Like Bob. And like me. Mind you, it is no big deal to me personally. But I don't like advertising here either, and there are plenty of alternatives to AMSOFT.

You seem to be aware of some internet policy judging from your long quoted (though not attributed) "lesson" to Bob. Perhaps you would find a more complete review of policy personally enlightening as well as commercially "prudent".

: KE6PRL.

Learning about HF propagation is a very interesting part of ham radio, and something you will grasp as your experience grows. You can start by reading as much about ham radio as you can...magazines, books, etc., even if much of it is for now "over your head". The answer to your specific question, in its short form, is:

Right now, with sun spot activity very low, you can depend on fairly local (somewhat better than line-of-sight) communications, and occassional openings to other parts of the country and overseas (DX).

In about 4-5 years, the answer is quite different. With a simple antenna and low power rig, you will be able to regularly contact hams all over the world during the daytime hours, and even into the evening. When sunspot activity is high (it is an 11 year cycle), ten meters is THE best, most enjoyable, most dependable band for world-wide communication (if you like such things). With 100 watts and a dipole, I have contacted over 100 countries within one 48 hour contest period (I am _not_ a "big-gun" contester, just "recreational").

Anyway, have fun, and don't ever give up on 10 meters!

In the State of Connecticut, amateur plates are NOT vanity plates and there is NO CHARGE for the plate...jjust show the DMV person your ticket and fill out a form. The plates in Connecticut are unique from others here in that they have a "spark gap"...(looks like a small lightening bolt) between the letters.

eg: Mine is K C 1 / H (the "/" is the spark)...Does the plate that your dad have different from the one you have in the above example? If it is, then maybe the DMV will make the change.

: Probably will have to go dual-band on this one.
: be a repeater. Repeater operation from 145.5-146.0 is illegal
: (97.205 (b)) and yes, the FCC does actual go after people that

Another thing to keep in mind, 145.800 - 146.000 is reserved for satellite
operation. You'll get jumped on quickly for that one.

Also, if the separation between your transmit and receive frequency is only
400 Khz apart, you're tramsmitter will totally desence your receiver.
Even your best duplexers are good for 600 Khz and thats gonna fill your
trunk and cost around a grand.

Good luck ! John k3nxu

1016. Uniden Bearcat 800XLT Scanner for sale

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-26 06:56:15 UTC
From: gblhotel@ix.netcom.com
Message-ID: <3g7h2f$m5v@ixnews2.ix.netcom.com>
Source record: 253039

I have a brand new, still in box scanner for sale. The Uniden Bearcat 800XLT base station was the last model manufactured that receive the 800 mhz band (Cellular PhoneS), before the FCC restrictions were in place.

The Bearcat 800XLT features:
* 40 channels
* 12-Band Coverage
* Crystalless
* Direct Channel Access
* Channel Lockout
* Simple Programming
* Manual Step-search
* AC/DC
* Steel Cabinet
* Two Antennas

This device is still in the box, and was used only once.

Paid $225 -- Sell $125 inc. postage

Interested parties should send an e-mail message to:

gblhotel@ix.netcom.com

Please include your phone number and the best time to call.

Hi Richard. According to the ARRL Bulletin 6 ARLB006 I rcvd yesterday (QST by W1AW) hams in Japan are are providing communication services in the Kobe disaster (I think there are about 200 amateurs).

Furthermore, JA3YRL in Kobe is the communications' coordinator and JA3RL monitors their activities.

Best regards.

I just acquired a TS-950SD with the SM-230 monitor. I have debate as to whether to keep or sell the scope.

I don't do much HF phone or digital modes, although that could change. Mostly, CW, contesting. Monitoring rx and tuning the amp seem the most likely functions.

Have you used one of these? What's your viewpoint? There are these couple of guys who want to buy it and I'm looking for reasons to keep it or not.

Thanks.....Bob

Subcarrier services, what is knows as SCS, is an enigma. Under the ECPA it is illegal to listen to them unless you are authorized to receive them, i.e., a paying subscriber to the service. However, these subcarriers are used for different purposes, and the companies that buy these ultrasonic carriers that are provided over regular FM broadcasts channels have different outlooks depenindg on the service type they are.

In the infancy of FM broadcasting, stations were going broke every day. This included the FM simulcating outlets of many successful AM statons who couldn't afford to pay the extra electric bill and could not get their advertiser to pay extra for the FM coverage.

FM stations were given SCA, (subcarrier authorization), as a way of earning money that would keep them solvent. Originally SCA was used for the purpose of providing background, (elevator), music to stores and businesses. Some of the stations provided it themselves, but mostly the SCA's were rented by companies like Muzak. Later the idea of private specialty networks came along with the long departed Physicans Radio Network and Dow Jones Radio. Data services have come in most recently. These are primarily news and stock information broadcast that are encoded and are used for businesses. Some of them are teletext, while some are just straight data.

The use of SCA's for foreign language programming came in around 1970, and not too much later came the radio readers, the service intended for the blind but also for shutins who cant go out and buy a newspaper or magazine. These two types of services throw the monkey wrench into the gears. Up to their arrival, the services were purely sold by suscriptions. Pay the provider and you get a fixed frequency receiver, stop paying and they come to take it away.

Foreign language services operate commercially, and for the most part, sell the receivers for a one time charge. To cut the costs, some had encouraged people to make their own modified radios, this means that the radio is not a fixed frequency type and can tune in any other station's subcarrier. There was a court action in the early 1960's where a subscription service sued someone for building and selling tunable SCA receivers. The court ruled that you could build a receiver for your own use or, for a reasonable charge, for someone else, but you couldn't go into business selling completed receivers to anyone else. This is how the foreign language services got away with it.

This allowance was really kept secret, but when the foreign language services and kit suppliers went public with it, of course the subscription services were upset, especially the backgound music and voice services. Although the ECPA now makes this practice illegal, there are still many tuneable receivers out there, and the owners are still authorized to listen to service they originally built the receiver for.

Services for the blind usually give away the receiver to the handicapped, and the manufacture and distribution is usually paid for by the government. In the US it's the Department of Health, Education and Welfare. Since DHEW is footing the bill, they also allow people to modify their own receivers to receive those services, it saves them taxpayers' money. This by a regulation that predates the ECPA.

Subcarriers are also used for internal purposes from the station itself, and monitoring these are defined illegal by the ECPA. These uses include; backup STL for the AM sister station, transmitter monitoring telemetry, and undelayed studio/cue feed to remotes/reporters in the field.

On the technical side, the FCC has standardized only one subcarrier, and that is the 38kHz, DSB, FM Stereo system and the associated 19kHz pilot signal. At the same time it tried to set the standard for the SCA to 67kHz, but some stations use 64kHz. With the exception of FM Stereo, all subcarriers are phase modulated so that they are of a constant level. This is so they're amplitude can be controlled so the station meets the requrements that prevent them from overmodulating.

The first subcarrier was at 41kHz, it allowed for 15kHz audio, but since it is an ultrasonic, it is effected by noise and multipath more than the main channel. Although used in experemental stereo transmissions for the right channel, it provided inferior audio due to it's limitations. This carrier cannot be used if the station operates in stereo, and is practically non existant today. When modulation limits were expanded to +/- 100kHz deviation, a second subcarrier was authorized. This is either 95 or 92Khz depending on the audio quality required to be transmitted.

In recent years, a system of traffic bulletin warnings has been incorporated on subcarriers between 58 and 62kHz. When a station in a particular area is about to air a traffic report, a Blaupunkt car radio with this built in feature will switch to that station. Pulse modulated tones are sent over one or more of these subcarriers to trigger the system.

I do not know how this system works, but the service is being expanded into weather bulletins and news as well and other manufacturers are making the radios.

Ah, no. Current flows in a loop, Kirchoff's law, or as an old electrician
put it, "it takes two wires to make a light". The direction of flow doesn't
matter as far as fusing is concerned. The fuse can be anywhere in the loop
to protect against overcurrents in the loop.

The reason for the fuse in the ground lead is so that if the strap connection
from the battery to the frame fails (and this happens fairly often due to
corrosion), vehicle power won't flow *through* your radio from the RF ground
connection back to the battery. A starter draws better than 200 amps, your
radio would be toast. IE, in this case, it's the *second* loop that you're
fusing, the *unintentional* loop of vehicle systems returning to the battery
via your radio and it's antenna connection.

I was in New Zealand two years ago. I took my HT and
found it was worthwhile. I was riding my bike so every pound
counted and it was worth the weight. Before I arrived I
contacted their equivolent of the FCC and arranged to get
a recipocal licensing permit. I just used my call/ZL1 and that
was that. If you have a little time before contact the ARRL re
how to do it. The Kiwis will tell you to pick up the permit
when you get i the country. Their office I went to in
Aukland was on a main stree so it would be easy to find.

If you need more info....dixon@vt.edu

I, too, fail to see how the negative lead fuse, in a negative-ground
vehicle is of any use. It certainly doesn't protect equipment inasmuch
as it is bypassed by the metallic car body, coax shield, and mounting
screws.

Followup?

Gary, I'm usually in agreement with your statements, but I've a problem with this one.

Presuming the ground strap to be broken (I've NEVER had one break in 40+ years of using cars), how could you get 200A to flow thru the #16 or #14 wire commonly used in a radio hookup?

Even if it did, why could it "toast" the radio if the radio case and coax shield are both connected to ground?

EH?

ARRL Bulletin 8 ARLB008
From ARRL Headquarters
Newington CT January 26, 1995
To all radio amateurs

SB QST ARL ARLB008
ARLB008 Board meeting news

The ARRL Board of Directors met in San Antonio, Texas, January 20 and 21, 1995. Here are the highlights.

The Board adopted a Strategic Long Range Plan that has been in preparation since May 1994, and instructed President George Wilson, W4OYI, to begin implementation. President Wilson appointed three new committees to coordinate the most critical aspects of plan implementation.

A package of legislative goals was adopted, including positions on special call sign and licensing fees, spectrum allocations, liability protection for volunteers, RF susceptibility of consumer equipment, better rules enforcement, and commercial competition for spectrum.

A fund raising effort in support of the AMSAT Phase 3D satellite project was approved, including a 150,000 dollar matching fund program.

An operational plan and budget for 1995 and 1996 was approved. ARRL dues were raised by one dollar per year effective April 1, 1995.

Repeater coordinators will be invited to an open meeting to discuss ways of strengthening FCC support of local and regional coordinators, and related issues.

A draft petition for greater flexibility in spread spectrum operation was revised to limit such operation to bands above 420 MHz, and the General Counsel was instructed to file the petition with FCC.

The ARRL will file comments supporting participation by radio amateurs in state and local emergency communications operating plans

under the new Emergency Alerting System that will replace the Emergency Broadcast System.

The final report of the Ad Hoc 219 MHz Committee was adopted, in preparation for an expected announcement of an amateur allocation in this band.

The Hiram Percy Maxim Birthday Celebration that was so popular in September 1994 was made an annual event.

Directors Harrison, Kanode, Mendelsohn, and Quiat were elected to one year terms on the ARRL Executive Committee.

Helen Grauer, N0BCI, and Directors Metzger and Butler were elected to three year terms as Directors of the ARRL Foundation.

Studies were ordered of ways to oppose restrictive covenants that limit amateur operation, and to increase FCC enforcement of its amateur rules.

The complete minutes of the meeting will appear in March QST.

Steve,

The effect that you describe is probably due to a dead or otherwise
bad cell in the battery pack. One way to tell is to fully charge it
and then measure the voltage it presents. My bet is that it's about
1.2 volts lower than what the label says.

I won't get into the "memory effect" fallacy here, but if such a thing
really existed, you wouldn't see it on a new battery pack.

If all else fails, take a 10 amp fuse, clip some leads to it,
and place it across the battery pack output. It will blow the fuse,
and for a moment, high current will flow through all the cells.
This might fix the problem, but it might not. Just to be safe,
wear eye protection.

If it's new, is it under warranty? I hope so. Those babies aren't
cheap, are they?!

I'm having trouble getting the SWR down on a Comet B20-NMO, dual band,
mobile antenna.

*
| < ='s adjusting point As depicted by my crude sketch,
| the bottom section is adjustable
#< in the base. The center loading
#< enclosed coil coil can be adjusted up/down on
| the bottom section and the tip
| is adjustable.
^<
When I get it tuned on VHF the SWR's high on UHF
and vice versa. What I am looking for is some direction
===== on the order of adjustments to perform and the sequence
of frequency bands to tune.

I'm having a similar problem with a Comet B10-NMO which is as above
minus the center, enclosed coil. It is a short antenna with a
spring/coil whip adjustable only in the base. I've thought about
stretching or compressing the coil but would appreciate some comments
from experience.

Please let me know if you've solved a similar problem with

>touchtone decoders (Thanks to Allan WA6AWD for the tip).

This is very important in linked systems where the audio will flow through
several filters before hitting the touch-tone decoders.

>the AMI S3526B
>filter chip works very well (feed it a crystal freq - one crystal can
>feed all the filter chips).

I'd be glad to provide a circuit for this if anyone would like it. Just
send me an E-mail. It's also in the AMI data book. The S3526B will also
generate the necessry tone frequency for the ID at the same time as
providing the notch. If you use a color burst crystal, you get 2600 Hz.

It's fairly early. 1984, (4Mil) and 1985, (5Mil) were probably the
first years. The desireable years to buy are about 7Mil and up.
However, I've known 5Mil 940's which have been upgraded (various
things from power supply protection to phase noise reduction) to
be very cherished by their owners.

My VEs told me this is how they do it: They mail the 610's to W5YI, and
then W5YI's group electronically (on disk) gives the FCC the applications.
Then apparently the FCC just takes the disk and lets the computer chew
on it and it's ready to process when it gets to those applications.

They don't mail the FCC directly or anything... So to break it down:

~2 days mailing to W5YI, day of processing there, ~2 days for the mail
to the FCC, and then that leaves 5 days for the FCC to do their stuff.

Also, it turned out to be 7 working days...

So anyway, is it bogus? Not as far as I know.. :)

|
|Just wondering Les, if Part 97 is the rules for the Amateur Radio service,
|how can they apply to any other service. Sorry, but they can't.

Except that "Part 97" is just that: a part of a larger body of rules, namely Title 47 of the Code of Federal Regulations. When part 97 say "No provision of these rules..." it is reasonable to interpret the phrase "these rules" to refer to the whole body of rules, not just part 97.

Some time back I noticed a phone in the imfamous "DAK" catalog that had a 16 button pad on it (that's right, ABCD). I ordered one and have found it very useful for controlling my repeater via the phone line. Recently, I have had a lot of requests from other members of the group for similar phones. I checked with DAK and other sources, but I can't find either the same phone I have or any other that has a 16 button pad. Has anyone else seen one of these or did I get a one of a kind?

Thanks,

For what its worth, when I put the engin back in a MGB one time (one of many times!), I forgot to
connect the frame ground. In this case the cranking current flows through the frame since the
batteries in an MGB are in a compartment behind the seats. Anyway, the first time I tried to start it, the manual choke cable caught fire! It was the only ground connection. I'm glad
it wasn't my 440 rig.

-I, too, fail to see how the negative lead fuse, in a negative-ground
-vehicle is of any use.

Normal starter circuit:

Positive----solenoid relay---starter---engine block---body---strap---Negative

If the strap were to open (corrosion, etc), replace ---strap--- with

---radio case (or antenna/coax)---black wire---fuse---Negative

That's why the fuse is needed. Otherwise something else (PCB traces, black wire) will *become* the fuse! The fuse in the red wire is to protect against failures in the radio or the red wire. It should be at the battery end, since a common failure is a red- wire to body short due to melting or abrasion at the firewall.

Your right the bernstein book is a real bonus.
Someone sent me a pointer to "The Guide To The AR1000"
from the Electronics Equipment Bank in Vienna VA.
Can anyone give me a comparison? Also How about posting
a reference to that newsletter, name, date, issue, etc.
Or forward my name and E-Mail on to m. alexander, if you can.

Donald Fisk contributed some of the above. Some are contentious. Is the A in "aisle" silent, or is it that the "a" and "i" are both pronounced collectively as the "i" in "isle" is? If you think the latter, then do you count that as a "completely different" pronunciation of A? Different from what? Different from the usual pronunciations? Which are they?

I've interviewed a few candidates that mentioned their ham license
either on the resume or in the interview. I'll usually play dumb
and ask a few questions about ham radio, then 'fess up that I'm
licensed, too. They'll ask my call, and, always, my license class.

One time, the candidate BSed on the answers to the radio related
questions. He looked a little nervous when I said "KK6JQ, Extra".

:-)

P.S. If a candidate lists something on a resume, it is fair to ask
about it, even if it isn't directly related to the job. At least IMHO.

Look, aid will be summoned somehow, either legally or illegally.
No one is suggesting you turn your back on the victim.

>You example about other means is reducto ad absurdum. A simple look
>around, or knowledge that he was out of repeater range (i.e. in the
>wildernesss, or even rural areas) would suffice any rational test.

We would hope so, but the authorities might not be in a rational
mood when they ask for your HT. I'm just asking that you cover
your okole (Hawaiian for what you sit on) so that you don't lose
your radio to the San Diego County Sheriff et al.

I'm offering my interpretation of ``...when normal communication
systems are not available.''

>BTW, signalling at a plane is useless.

Not with a parabolic signal mirror; I recall being given one when
I was in the military. They abound in the surplus stores. Believe
me, they work.

>In fact, it could even be illegal.

So is transmitting out-of-band when unnecessary. In actuality, there is no prohibition against using a signal mirror in a distress. {BTW, these are of handheld size; this will cause no visual impairment to an airplane pilot.}

1064. RFI - TNC/Keyboard

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-28 03:15:56 UTC
From: brannick@ix.netcom.com
Message-ID: <3gcctc$dp@ixnews3.ix.netcom.com>
Source record: 253064

I have recently purchased an Ameritron 811H amplifier primarily to help my sigs on 40 and 80 meter. Works well on SSB and CW.

However I also like to work the digital modes (RTTY, Amtor, Pactor) but have found that if a run the amp at all, I am getting RF into the Computer keyboard, a recent Gateway product and to some degree into the AEA 232MBX, to the extent that the green "STA" lamp (normally extinguished in these modes) glows brightly as I increase power. These problems only exist on 40 and 80. The dipole I use for these bands is probably 40 feet away (straight line distance)

I have already added two 4 inch ferrite rods into the coiled portion of the keyboard cable, which as resulted in limited, but perceptable improvement.

I have no ideas as to what to do on the TNC except for trying the Radio Shack chokes on each connection at the back of the unit.

Initially I thought perhaps the TNC problems were causing the keyboard thing, but have eliminated that possibility by bringing up my word processor and finding that the keys are effected there also if the amplifier is "key-down"

Any suggestions would be appreciated.

1067. GB2RS News 29th January 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-28 09:38:46 UTC
From: dave@llondel.demon.co.uk
Message-ID: <791311126snx@llondel.demon.co.uk>
Source record: 253067
Cross-posted to: uk.radio.amateur,rec.radio.amateur.misc,rec.radio.info

Good morning. It's Sunday the 29th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First this week's headlines:-

Two Microwave records have been broken;

and GB2RS is available again on television in the Home Counties;

Two world records have recently been broken on the microwave bands. On the 10GHz band, VK5NY has worked VK5KZ/VK6 over a distance of 1,911km. And on the 145GHz band - that's 145 Gigahertz, not Megahertz - OZ9ZI and OZ1UM exchanged reports over an 11km path. They used 47GHz for talkback. The February edition of Radio Communication, features the Danish Microwave Activity week and the record-breaking work on 145GHz.

This edition of RadCom, which is scheduled to be posted to all RSGB members this week, also includes advice to members on the planning implications of using mobile masts.

The GB2RS News Service is broadcast on a number of bands and modes, including amateur television on the 1.3GHz band. After a period of inactivity, the television broadcast provided by Roy Powers, G8CKN, has returned to its regular service.

The broadcast is goes out live via Home Counties Amateur Television Group's repeater, GB3HV, at High Wycombe at 9.30 am on Sunday mornings. It is recorded at the repeater and is then available on demand during the rest of the week. GB3TV transmits on 1308MHz.

Photographs of events covered in the news would be appreciated for insertion into this transmission. Further information on this TV broadcast and the GB3HV repeater can be obtained from Mike, G8LES, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Nauru (C2), W9GW will be active for the FOC Marathon which takes place next weekend, the 4th and 5th of February.

And from Christmas Island, members of the Bavarian Contest Club will sign VK9XY from next Thursday, the 2nd for a week, operating on all bands.

A free sample copy of the DX News Sheet can be obtained from RSGB HQ by calling 01707 659015.
Next the Rally News and we know of two events for today, Sunday the 29th of January:

The Lancaster Rally, is being held at Lancaster University, Lancaster. Doors open at 11am, or 10.30am for disabled visitors. This year's event is in larger halls than previously, with more trade stands, a bring and buy stall and special interest groups stands. Refreshments are available.

The Fenland Repeater and Lincs Packet Group's Midwinter Junkarama is being held at the Horncastle Youth Centre, Horncastle, Lincolnshire. The event starts at 10.30am and features trade stands and club tables. Refreshments are available.

And now the one event we know of for Sunday the 5th of February:

The South Essex Amateur Radio Society Radio Rally, is to be held at The Paddocks, Long Road, Canvey Island, Essex. The Paddocks is located at the end of the A130. The rally features trade stands, a bring and buy stall, and refreshments. Disabled car parking facilities will be located near the main doors. Doors open at 10.30am Talk-in will be on 2 metres, channel S22. Further details can be obtained from Roger, G0LTO, on 01268 693786.

On Sunday the 19th of February the 1994 RSGB VHF Convention is to be held at its usual venue at Sandown Race Course, Esher, Surrey on. Full details of the event, including the comprehensive lecture programme, are published in the January and February editions of RadCom, or can be obtained by calling RSGB HQ on 01707 659015.

Every year, RSGB Headquarters at Potters Bar has an Open Day so that members and non-members can see the HQ of the organisation which represents amateur radio in the UK. This year's open day is on Saturday, the 22nd of April. This coincides with International Marconi Day so exhibits and a special event station will mark the centenary of Marconi's practical demonstrations of radio. Make a note in your diary now for the 22nd of April.

Now for the HF contest news:

The final rounds of the RSGB LF CW Contest take place this week: 7MHz events are held today, Sunday the 29th of January, and next Saturday, the 4th. Both are from 1000 to 1200 UTC. Next Thursday, the 2nd, sees a 1.8MHz event from 2000 to 2200 UTC, and next Sunday, the 5th, a 3,5MHz event is held from 1600 to 1800 UTC. December's RadCom, page 78, gives detailed information.

The CQ World Wide 160 metre Contest took place this weekend, and it finishes at 1600 UTC today, the 29th. See January RadCom page 24 for brief details.

The February edition of RadCom includes a full report on the IARU Region 1 SSB Field Day which took place last September. The Open Section winner was Lichfield Amateur Radio Society, G3WAS Portable and the Restricted Section winner was Plymouth Radio Club, G3PRC Portable.

Next some VHF contest news:

The second of five RSGB 70MHz Cumulative Contest events takes place today Sunday the 29th, from 1000 to 1200 UTC. There are three sections, Fixed station single operator, Open and Listeners. See January RadCom page 81 for further details.

Next Sunday, the 5th of February, there is the RSGB 432MHz Fixed, Affiliated Societies and SWL Contest. The event takes place between 0900 and 1500 UTC and full details can be found in January's RadCom.

The RSGB VHF Contests Committee has announced a new mailing address for the entries to VHF events. This is: PO Box 29, Bridgend CF35 5YA. Logs can still be sent to individual adjudicators, but it is hoped that the single address will be easier for contestants to remember.

And now the solar factual data:

First this week we would like to congratulate the Space Environment Laboratory at the Space Environment Services Center Boulder, Colorado, on attaining the American Secretary of Commerce Customer Service Excellence Award. This award was received from Secretary Brown in Washington on the 22nd of November 1994. The RSGB would like to thank everybody involved for providing a first class service in supplying the Propagation Studies Committee with the solar - geophysical data information.

The period from the 16th to the 22nd of January saw an increase in sunspots and flux levels with flares reported on several days. Geomagnetic activity declined to quiet levels. Sunspot Indices increased from 30 on the 16th to 96 on the 22nd, with the sunspot mean at 62. Solar flux levels also increased every day from 83 units at the start, to 96 units at the end of the period. The average was 90 units.

Several sub-flares were reported. On the 18th at 17.42 hours a C1.2/SF took place, this was the largest flare of the period. The electron fluence remained reasonably steady at moderate levels throughout. The x-ray flux levels increased from A5.1 units on the 16th to B1.9 units by the 21st, averaging B1.0 units. Average 90 day solar flux on the 22nd was 83 units.

Geomagnetic activity declined from 'sub-storm' levels on the 17th and 18th with an Ap index of 27 and 28 units respectively, to quiet levels with an Ap index of only 5 units on the 21st. The average for the period was Ap 13 units. The state was 'magalert' at first due to a coronal hole, then declined to 'quiet' after the 18th. The aa indices, as reported by the British Geological Survey for the period from the 10th to the 16th, were at mostly quiet levels with the 15th down to only 9.0 nanoTeslas. Only the 11th and the 16th were at active levels. The

average for the period was 17.5 nanoTeslas, about K2.

I'll repeat the figures: spots-62; flux-90; Ap index-13; X-ray flux-B1.0.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 13th to the 19th of January, averaged 6.7MHz. On the 15th, a critical frequency of only 6.1MHz was recorded but the best day was the 17th at 7.3MHz. The darkness hour lows averaged 2.3MHz and were down to 1.9MHz on the 19th. Spread F was also reported for 13 hours from 19.00 hours on the 18th. The day time highs are taking place between 10.00 and 14.00 hours. Darkness hour lows are mostly between 04.00 and 06.00 hours but can be as early as 19.00 hours as was the case on the 14th.

And lastly the solar forecast.

This week the quieter side of the sun will be looking our way. Solar activity is expected to be very low with the solar flux into the 70s. Geomagnetic activity is expected to be at 'unsettled to active' levels for most of the week. Ionospheric MUFs may decrease during the week but, for the south, levels are expected to be at about 20MHz and, for the north, about 17MHz at best. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Quebec and G7 Tango Zulu series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Papa series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

Posted-By: auto-faq 3.1.1.4
Archive-name: ham-faq-ptr

How to find the Rec.radio.amateur.misc Frequently Asked Questions list
---

This article will tell you how to find the answers to frequently-asked
Questions (FAQ) from rec.radio.amateur.misc. The FAQ articles are posted on
the 7th and 21st of each month. This article is posted on the 14th and 28th
of every month as a reminder of where to find the FAQ.

The FAQ articles are intended to summarize some common questions on the
rec.radio.amateur.misc newsgroup and Info-Hams mail list as well as to help
beginners get started.

Besides the monthly posting, the FAQ is always available via anonymous FTP
and from e-mail servers. This article contains instructions for obtaining a
copy of the FAQ. It also contains the table of contents from the FAQ so
that you know which questions are covered by it.

Please provide a copy of the FAQ to any new or soon-to-be Hams you know.

Regular FAQ postings can help save network bandwidth and maintain a good
signal-to-noise ratio in the newsgroup. However, they can't do it alone - you,
the reader, have to use them. If you are a new user, please print and review
the FAQ articles and look at the instructions in the news.newusers newsgroup
before posting any articles. If you are an experienced user, please help by
refraining from answering frequently-asked questions on the newsgroup if they
are already answered by the FAQ articles. Instead, send e-mail to the user who
asked the question. (It will be helpful if you include the part of the FAQ
that answers their question, but not the whole thing.)

--How to obtain a current copy of the FAQ-----------------------------------

There are 7 ways to obtain a copy of the FAQ.
1) World-Wide Web (WWW) and Mosaic
2) NetNews
3) Anonymous FTP
4) An Electronic Mail Server
5) Mail List Subscription
6) Gopher
7) Wide Area Information Server (WAIS)

Option #1: World-Wide Web (WWW) and Mosaic

The World-Wide Web (WWW) has experienced explosive growth in usage in 1993

and 1994. WWW clients like Lynx (in ASCII text) or Mosaic (X/Mac/Windows) can display the FAQ from many different sources. Each source is named by a URL (uniform resource locator.) If you are one of the growing numbers of people with Internet access, Option #1 is your choice. The following URL can be used to find the FAQ:

http://www.cis.ohio-state.edu/hypertext/faq/usenet/radio/ham-radio/faq/top.html

Other services listed later in this article are also accessible with WWW at the following URLs:
news:rec.radio.info
file://ftp.amdahl.com/pub/radio/amateur
file://ftp.cs.buffalo.edu/pub/ham-radio
file://rtfm.mit.edu/pub/usenet/news.answers/radio/ham-radio/faq
file://grivel.une.edu.au/pub/ham-radio/buffalo/ham-radio
file://nic.funet.fi/pub/ham/info
gopher://cc1.kuleuven.ac.be/
gopher://jupiter.sun.csd.unb.ca/
gopher://gopher.univ-lyon1.fr/
gopher://ftp.win.tue.nl/
gopher://gopher.win.tue.nl/
wais://rtfm.mit.edu/usenet

For more information on WWW, see the comp.infosystems.www newsgroup. Also, the help options on your WWW client should be able to point you to lots of information all over the world.

Option #2: NetNews

If you are familiar enough with NetNews to look through previous articles on your system, Option #2 above may be the easiest for you. The FAQ is posted so that it should not expire from your site's news spool until the next one is posted. Unfortunately, some news administrators do not honor the expiration dates meant to preserve the FAQ.

Look in rec.radio.amateur.misc, rec.radio.info, rec.answers, or news.answers. If the FAQ has expired at your site, try Option #3 (and ask your news administrator to honor expiration dates for articles cross-posted to news.answers if he/she can.)

Option #3: Anonymous FTP

Anonymous FTP uses the File Transfer Protocol. It is only available to sites which are directly connected to the Internet. If you don't know how to use FTP and can't find a friend to help you, continue to Option #4. If your site is not connected to the Internet, you should also continue to Option #4.

The following sites have copies of the FAQ:
site name & address path to FAQ articles
------------------ --------------------
ftp.amdahl.com pub/radio/amateur/faq.[1-3].Z
located in western USA, FAQ updated daily

ftp.cs.buffalo.edu pub/ham-radio/faq_ham_[1-3]
located in eastern USA, FAQ updated monthly
rtfm.mit.edu pub/usenet/news.answers/radio/ham-radio/faq/part*
located in eastern USA, FAQ updated monthly
contains news.answers archive - most UseNet FAQs are here
grivel.une.edu.au pub/ham-radio/buffalo/ham-radio/faq_ham_[1-3]
located in Australia, FAQ updated monthly
(Ham files mirrored from buffalo/funet/ucsd daily)
nic.funet.fi pub/ham/info/faq_ham_[1-3]
located in Finland, FAQ updated monthly

Remember, when connecting to the remote system, use the login name of
"anonymous" and, as a courtesy to the site administrators, your e-mail address
for the password.

Option #4: Electronic Mail Server

If you can't use Options 1 or 2, your only remaining option is electronic mail.
You can retreive a copy of the FAQ by sending a message to
mail-server@rtfm.mit.edu

The body of your mail will contain a command for the mail server software.
To get all of the FAQ (consisting of 70K of e-mail in 3 parts), place the
following in the first line of your message:
send usenet/news.answers/radio/ham-radio/faq/*

Leave out the subject of your message because the mail server will ignore it.

--- begin sample mail message ---
To: mail-server@rtfm.mit.edu
From: me@here.org
Date: Mon Aug 14 22:27:33 PDT 1995

send usenet/news.answers/radio/ham-radio/faq/*
--- end sample mail message ---

Option #5: Mail List Subscription

If you prefer, you may get the FAQ and other periodic Ham Radio information
as it gets posted. All the information posted to rec.radio.info can be
obtained through the UCSD list server via the "radio-info" mail list. To
subscribe, send an e-mail to
listserv@ucsd.edu
Similar to the e-mail server listed above, just send a single-line message
subscribe radio-info
If you need more information, the listserv program also accepts a "help"
command. Just keep it on a separate line in the message.

Option #6: Gopher

You can access gopher servers on TCP port 70 (gopher protocol) at the
following locations which carry the Ham Radio FAQ:
cc1.kuleuven.ac.be

jupiter.sun.csd.unb.ca
gopher.univ-lyon1.fr
ftp.win.tue.nl
gopher.win.tue.nl
For more information on gopher, see the comp.infosystems.gopher newsgroup.

Option #7: Wide Area Information Server (WAIS)

In addition to the other services mentioned above, rtfm.mit.edu offers a
WAIS server on TCP port 210. Use the "usenet" database to access the FAQ.

For more information on WAIS, see the comp.infosystems.wais newsgroup.

Table of Contents

Dates indicate last modification.

Part 1 - Introduction to the FAQ and Amateur Radio
** Table of Contents (10/94)
** Introduction to the FAQ (11/92)
* How to Contribute to the FAQ Articles (6/93)
* Please Send Questions to the Newsgroups, Not the Editors (9/94)
* Call for FAQ Editors (8/94)
* Acknowledgements (6/93)
* Notes on "Netiquette" (1/93)
** What is Amateur Radio? (11/92)
** Who can become a ham? (6/93)
** Where can I locate information and books on Amateur Radio? (9/93)
** How much does it cost? (9/92)
** Where can I take the tests? (9/93)
** What are the tests like? (6/93)
** What can I do with a ham radio license? (5/92)
** What can't I do with an Amateur Radio license? (pre-4/92)
** I'm interested, who will help me? (11/92)
** Should I build my own equipment or antenna? (11/92)

Part 2 - Amateur Radio Organizations, Services, and Information Sources
** Where can I find Ham Radio information with a computer? (8/94)
* Mosaic, World-Wide Web, Gopher, and WAIS (8/94)
* The rec.radio.* newsgroups (2/94)
* The ARRL e-mail server (1/93)
* The KA6ETB e-mail "HAM-server" (10/94)
* The Internet File Transfer Protocol (FTP) (2/94)
* Access to FTP archives via electronic mail (1/93)
* The Ham-Radio mail list: rec.radio.amateur.misc by mail (9/93)
* Telephone BBS's with Ham-related information (9/93)
* Callsign servers and geographical name servers (1/94)
* FTP access to FCC Part 97 and FCC Amateur Radio question pools (1/94)
* Lists of radio modifications and extensions (2/94)
** Can I send ARRL or W5YI electronic mail? (11/92)

** "Why doesn't the ARRL do...?" (11/92)
** What magazines are available for Ham Radio? (pre-4/92)
** How do I use the incoming and outgoing QSL bureau? (11/92)
** Are there any news groups for CAP? (11/92)
** What's the name of the QRP club that issues QRP numbers? (9/93)
** How do I become a 10-10 member? (9/93)
** How do I join MARS? (9/93)
** How do I join RACES? (pre-4/92)
** What organizations are available to help handicapped hams? (pre-4/92)
** I am looking for a specific ham, can anyone help me find him? (6/93)
** Can I post my neat new ham related program on rec.radio.amateur.misc?
(pre-4/92)
** Where can I get ham radio software for my computer? (9/93)
** Are there Dialup News services or BBSs for Amateur Radio? (4/92)
** Where can I find VE sessions in my local area? (9/93)
** Why isn't XXX available electronically? (1/94)
** I'd like to volunteer to help ham radio through electronic
information services like those mentioned in this FAQ list.
Where should I start? (2/94)

Part 3 - Amateur Radio Advanced and Technical Questions
** What are the different US amateur classes and what can each of them do?
(pre-4/92)
** What is the best way to learn Morse Code? (10/92)
** What is the standard for measuring Morse code speed? (pre-4/92)
** What is the standard phonetic alphabet? (10/94)
** I'm confused. What do all those abbreviations mean??? (6/93)
** What do all those "tones" mean? (pre-4/92)
** Where can I learn more about Amateur Radio if I live outside the US?
(9/93)
** How can I get a "reciprocal license" if I am a licensed ham from another
country or if I am a FCC licensed ham who wants to operate in another
country (on vacation)? (9/93)
** My apartment or housing complex does not allow outdoor antennas, now what
do I do? (9/93)
** I got TVI...HELP!!! (9/93)
** On what frequencies do JPL and GSFC retransmit the shuttle audio?
(10/92)
** Can I take my HT on an airplane and operate it if I get the permission
of the captain? (4/92)
** How do I modify my current Amateur license? (9/93)
** I'm confused about XXX, should I ask the FCC? (9/93)
** Is there any information on antique radios? (pre-4/92)
** Where can I buy vacuum tubes? (9/93)
** What do I need to get started in packet radio? (9/93)
** What do I need to get started in satellite communications? (9/93)
** What is available to get started in ATV, SSTV and WEFAX? (9/93)
** What are these contests I sometimes hear, and how do I participate? (9/93)

--Asking Questions---

If you have questions about Amateur Radio (a.k.a. Ham Radio), please read the FAQ. If your question is not answered there, check if you have any other sources (i.e. Mosaic/WWW) before proceeding. If you still don't have an answer, post your question to the most appropriate rec.radio.amateur.* newsgroup. And be sure to mention where you have already looked for the answer so people won't mistakenly tell you to try them again.

Thank you for doing your part to conserve network bandwidth!

--Submitting changes for the FAQ----------

If you have comments or updates for the FAQ, send e-mail to
hamradio-faq@amdahl.com
This will send mail to all the people on the FAQ editorial review group.

--Call for FAQ Editors----------

As with any volunteer effort, new volunteers are often needed. We need a new editor to post the Ham Radio FAQ. Preferably this should be someone who has enthusiasm for Ham Radio, experience with UseNet, and the ability to work with the other editors. No single person can know all the various aspects of this diverse hobby so the editorial review group is intended to make a greater combination of experience.

The FAQ is currently posted with the AUTO-FAQ software, which is written in PERL. So it would be a plus for volunteers to post the FAQ to have PERL installed on their system and be able to use "cron" or "at" so that postings can go unattended.

Anyone who wants to make their contribution to the Net as a volunteer should contact hamradio-faq@amdahl.com.

Message-Id: <3gcmu7$e0a@news1.digex.net>

Hi!

I was wondering if anyone can point me to an up-to-date source of
International prefixes and maybe even full callsigns.

I have the '95 Callbooks and several CD Roms, but I'm sure there
are still dynamic changes from week to week and I wonder if someone may
know of an internet source of these changes.

For example, I just heard a CL7BC on 40 meter CW and could not find
the CL7 prefix in the International Callbook, or anywhere else. Since
I'm not an educated DXer, I would really like an up to date reference.
By, the way, he was calling CQ and I'm POSITIVE I copied the callsign
correctly.

While I realize there are non-valid calls around the bands, I would
really like to know if there is a day to day database or other source of
VALID info?

Thanks for any replies.

Alan

1072. GB2RS News 29th January 1995

Newsgroup: rec.radio.amateur.misc
Date: 1995-01-28 14:38:46 UTC
From: David.Hough@f1.n328.z1.fidonet.org
Message-ID: <b80_9502010140@trisoft.com>
Source record: 253071

From: dave@llondel.demon.co.uk (David Hough)
Date: Sat, 28 Jan 1995 09:38:46 +0000
Message-Id: <791311126snx@llondel.demon.co.uk>

Good morning. It's Sunday the 29th of January and here is the GB2RS news broadcast, prepared by the RSGB and intended for all radio amateurs and short-wave listeners.

First this week's headlines:-

Two Microwave records have been broken;

and GB2RS is available again on television in the Home Counties;

Two world records have recently been broken on the microwave bands. On the 10GHz band, VK5NY has worked VK5KZ/VK6 over a distance of 1,911km. And on the 145GHz band - that's 145 Gigahertz, not Megahertz - OZ9ZI and OZ1UM exchanged reports over an 11km path. They used 47GHz for talkback. The February edition of Radio Communication, features the Danish Microwave Activity week and the record-breaking work on 145GHz.

This edition of RadCom, which is scheduled to be posted to all RSGB members this week, also includes advice to members on the planning implications of using mobile masts.

The GB2RS News Service is broadcast on a number of bands and modes, including amateur television on the 1.3GHz band. After a period of inactivity, the television broadcast provided by Roy Powers, G8CKN, has returned to its regular service.

The broadcast is goes out live via Home Counties Amateur Television Group's repeater, GB3HV, at High Wycombe at 9.30 am on Sunday mornings. It is recorded at the repeater and is then available on demand during the rest of the week. GB3TV transmits on 1308MHz.

Photographs of events covered in the news would be appreciated for insertion into this transmission. Further information on this TV broadcast and the GB3HV repeater can be obtained from Mike, G8LES, whose address is correct in the RSGB Call Book.

Now some items of HF DX news from the weekly RSGB DX News Sheet which is edited by Brendan McCartney, G4DYO.

From Nauru (C2), W9GW will be active for the FOC Marathon which takes place next weekend, the 4th and 5th of February.

And from Christmas Island, members of the Bavarian Contest Club will sign VK9XY from next Thursday, the 2nd for a week, operating on all

bands.

A free sample copy of the DX News Sheet can be obtained from RSGB HQ by calling 01707 659015.
Next the Rally News and we know of two events for today, Sunday the 29th of January:

The Lancaster Rally, is being held at Lancaster University, Lancaster. Doors open at 11am, or 10.30am for disabled visitors. This year's event is in larger halls than previously, with more trade stands, a bring and buy stall and special interest groups stands. Refreshments are available.

The Fenland Repeater and Lincs Packet Group's Midwinter Junkarama is being held at the Horncastle Youth Centre, Horncastle, Lincolnshire. The event starts at 10.30am and features trade stands and club tables. Refreshments are available.

And now the one event we know of for Sunday the 5th of February:

The South Essex Amateur Radio Society Radio Rally, is to be held at The Paddocks, Long Road, Canvey Island, Essex. The Paddocks is located at the end of the A130. The rally features trade stands, a bring and buy stall, and refreshments. Disabled car parking facilities will be located near the main doors. Doors open at 10.30am Talk-in will be on 2 metres, channel S22. Further details can be obtained from Roger, G0LTO, on 01268 693786.

On Sunday the 19th of February the 1994 RSGB VHF Convention is to be held at its usual venue at Sandown Race Course, Esher, Surrey on. Full details of the event, including the comprehensive lecture programme, are published in the January and February editions of RadCom, or can be obtained by calling RSGB HQ on 01707 659015.

Every year, RSGB Headquarters at Potters Bar has an Open Day so that members and non-members can see the HQ of the organisation which represents amateur radio in the UK. This year's open day is on Saturday, the 22nd of April. This coincides with International Marconi Day so exhibits and a special event station will mark the centenary of Marconi's practical demonstrations of radio. Make a note in your diary now for the 22nd of April.

Now for the HF contest news:

The final rounds of the RSGB LF CW Contest take place this week: 7MHz events are held today, Sunday the 29th of January, and next Saturday, the 4th. Both are from 1000 to 1200 UTC. Next Thursday, the 2nd, sees a 1.8MHz event from 2000 to 2200 UTC, and next Sunday, the 5th, a 3,5MHz event is held from 1600 to 1800 UTC. December's RadCom, page 78, gives detailed information.

The CQ World Wide 160 metre Contest took place this weekend, and it finishes at 1600 UTC today, the 29th. See January RadCom page 24 for

brief details.

The February edition of RadCom includes a full report on the IARU Region 1 SSB Field Day which took place last September. The Open Section winner was Lichfield Amateur Radio Society, G3WAS Portable and the Restricted Section winner was Plymouth Radio Club, G3PRC Portable.

Next some VHF contest news:

The second of five RSGB 70MHz Cumulative Contest events takes place today Sunday the 29th, from 1000 to 1200 UTC. There are three sections, Fixed station single operator, Open and Listeners. See January RadCom page 81 for further details.

Next Sunday, the 5th of February, there is the RSGB 432MHz Fixed, Affiliated Societies and SWL Contest. The event takes place between 0900 and 1500 UTC and full details can be found in January's RadCom.

The RSGB VHF Contests Committee has announced a new mailing address for the entries to VHF events. This is: PO Box 29, Bridgend CF35 5YA. Logs can still be sent to individual adjudicators, but it is hoped that the single address will be easier for contestants to remember.

And now the solar factual data:

First this week we would like to congratulate the Space Environment Laboratory at the Space Environment Services Center Boulder, Colorado, on attaining the American Secretary of Commerce Customer Service Excellence Award. This award was received from Secretary Brown in Washington on the 22nd of November 1994. The RSGB would like to thank everybody involved for providing a first class service in supplying the Propagation Studies Committee with the solar - geophysical data information.

The period from the 16th to the 22nd of January saw an increase in sunspots and flux levels with flares reported on several days. Geomagnetic activity declined to quiet levels. Sunspot Indices increased from 30 on the 16th to 96 on the 22nd, with the sunspot mean at 62. Solar flux levels also increased every day from 83 units at the start, to 96 units at the end of the period. The average was 90 units.

Several sub-flares were reported. On the 18th at 17.42 hours a C1.2/SF took place, this was the largest flare of the period. The electron fluence remained reasonably steady at moderate levels throughout. The x-ray flux levels increased from A5.1 units on the 16th to B1.9 units by the 21st, averaging B1.0 units. Average 90 day solar flux on the 22nd was 83 units.

Geomagnetic activity declined from 'sub-storm' levels on the 17th and 18th with an Ap index of 27 and 28 units respectively, to quiet levels with an Ap index of only 5 units on the 21st. The average for the period was Ap 13 units. The state was 'magalert' at first due to a coronal hole, then declined to 'quiet' after the 18th. The aa indices, as

reported by the British Geological Survey for the period from the 10th to the 16th, were at mostly quiet levels with the 15th down to only 9.0 nanoTeslas. Only the 11th and the 16th were at active levels. The average for the period was 17.5 nanoTeslas, about K2.

I'll repeat the figures: spots-62; flux-90; Ap index-13; X-ray flux-B1.0.

Now the ionospheric data for Central France.

The F2 daytime critical frequencies at Poitiers, as reported by Meudon for the period from the 13th to the 19th of January, averaged 6.7MHz. On the 15th, a critical frequency of only 6.1MHz was recorded but the best day was the 17th at 7.3MHz. The darkness hour lows averaged 2.3MHz and were down to 1.9MHz on the 19th. Spread F was also reported for 13 hours from 19.00 hours on the 18th. The day time highs are taking place between 10.00 and 14.00 hours. Darkness hour lows are mostly between 04.00 and 06.00 hours but can be as early as 19.00 hours as was the case on the 14th.

And lastly the solar forecast.

This week the quieter side of the sun will be looking our way. Solar activity is expected to be very low with the solar flux into the 70s. Geomagnetic activity is expected to be at 'unsettled to active' levels for most of the week. Ionospheric MUFs may decrease during the week but, for the south, levels are expected to be at about 20MHz and, for the north, about 17MHz at best. The darkness hour lows are expected to be about 7MHz.

And that's the end of the solar information.

Finally in the main news, SSL has informed the Society that as of last Wednesday morning, the latest callsigns allocated were in the G0 Victor Quebec and G7 Tango Zulu series, and Novice calls in the 2 0 Alpha Juliet and 2 1 Delta Papa series.

--

GB2RS is prepared by the Radio Society of Great Britain
and is broadcast in the 80m, 40m, 6m and 2m bands.

In article <phb.791239092@melpar> phb@syseng1.melpar.esys.com (Paul H. Bock) writes:
>
> Regarding the recent ARRL VHF Sweepstakes: There is a
>serious problem within FM18/19 with several well-known stations
>capable of high-power operation. This problem manifests itself
>in two ways, which I will cover in turn.

I'm not an avid contest operator, but I've observed the effects
of contests on other operations in the band. Thus I'd like to
contribute to this thread from that perspective.

>I. Excessive power for conditions
>
> By running maximum power output at all times, stations with
>an otherwise "clean" output are creating severe intermodulation
>problems for other stations within FM19. While it is all well
>and good to say "it's a receiver problem," that answer reflects
>an inconsiderate, if not downright arrogant, attitude. *Most* of
>the two-meter SSB operators who tried out the contest are using
>commercially-built equipment; they are stuck with what they have,
>and many are not knowledgable enough (nor do they care to spend
>the extra money) to modify their equipment for improved intermod
>performance. To "expect" them to do that just because they're
>hams is unrealistic. This is a hobby; they bought approved
>commercially-built equipment; they should be able to enjoy
>reasonably interference-free operation if everyone acts in a
>considerate manner.

The FCC says we must run the minimum necessary power to achieve
communications at all times. That power level is pretty easy to
predict on known point to point paths. In a contest, however,
stations are trying to achieve the maximum possible number of
contacts over the longest and most difficult possible paths.
This begs stations to run the maximum legal power. In other words,
the question is not, "how much power do I need to make this point
to point path", rather it is "what paths can I work maximizing
every factor at my disposal, including power".

The purpose of contests is supposed to be the same as racing,
to improve the breed, to push all the limits of the possible
to their furtherest extent. A major benefit of contests is to
push amateurs and manufacturers to produce the best equipment
possible within the constraints of the amateur marketplace.
To deliberately hold this effort back in order to allow poorly

designed and constructed equipment a better chance seems to
me to be counterproductive in the long run. Do we really want
to shade the rules in favor of mediocre stations and equipment?
I think not.

Part of being an amateur is learning that manufacturers don't
always know best, and that your generic Kenwood just can't hack
it in a real dustup with better equipped stations. Perhaps you
should have bought Yaesu or Icom equipment, or perhaps you
should modify what you've got, or perhaps you should build
your own. This competition under severe conditions leads to
improved designs, and that's good for all amateurs in the
long run. It also leads to more knowledgeable amateurs, and
that's very good, and an important part of the amateur service's
charter.

[Gag, I'm actually supporting contesting here. Many of you never
thought you'd see that I'll bet. The only justification I can offer
is that VHF/UHF contesting is sufficiently different from HF contesting
to allow me to support it.]

>II. Trashy Signals
>
> The January VHF Sweepstakes unfortunately pointed out
>another problem: High-power operators with trashy signals.
>While the intermod problem is one which we must live with
>whenever a high-power station "cranks up the juice," even if it's
>done responsibly and just to capture a distant grid, splatter and
>spurious emissions are totally unnecessary and can be eliminated
>by *proper operation* of the equipment. High power operators
>need to be particularly sensitive to this problem, and thoroughly
>knowledgeable about how to tune and adjust their equipment
>correctly. If the equipment cannot be operated properly, and/or
>if the operator doesn't have the necessary test equipment
>available to measure performance parameters, then he/she shouldn't
>be operating high power.

This, on the other hand, is a completely valid criticism. Amateurs
should make sure that the signals they radiate are as clean as
necessary for the conditions under which they operate. This
is particularly acute for higher power operations since the noise
floor usually will mask poor performance from low power stations,
but at high power the same degree of spurious suppression will
leave easily detectable signals present in the band to interfere
with others.

The FCC rules don't address what is commonly called the "near-far"
problem. A spurious product that can't be detected at a far location
can still plague a nearby station even if the transmitting station
is operating within the FCC guidelines. This is especially true if
the nearby station is optimized exclusively for weak signal performance
to the detriment of strong signal handling. Even if a nearby station

is optimized to handle strong adjacent signals, an on channel product will still present problems. This moves from the realm of receiver improvement to the realm of transmitter improvement.

I don't think we should shade contest rules to reward poor receiver engineering, but on the other hand, I also don't think that trashy transmitters should be rewarded either. On the race track, cars that are dropping oil on the track are black flagged and pulled into the pits until they can be repaired. Now in the amateur service, that officiating job belongs to the FCC, but they are notoriously under strength and aren't performing that task very well. So that leaves the officiating task to other amateurs. But many of them are using poorly engineered commercial equipment, and it's difficult to tell where the problem actually is. Perhaps a selected set of COs (Contest Observers) setup with proper monitoring equipment can be sanctioned by the ARRL to "black flag" offending stations during contests.

Gary

Alan, you worked a Cuban novice. See Page 17 - 19 of the ARRL Operating Manual. You're right that it's not perfectly up to date, but I think you can get a very recent version from the ARRL via e-mail.

73,

Rick WB9GYT

>Thanks,
>Pete McAfee <kd6hr>
>pmcafee@netcom.com

If you are staying in New Zealand for up to a month then you can operate
without a specific licence on 2 metres and 70 cm. If you are staying longer,
or if are planning more extensive operation, you should consider getting a
licence. This can be done over the counter at any of the Ministry of Commerce
Radio Operations officers. They are quite helpful.

There are about 200 repeaters around the country, so you shouldn't have too
much trouble finding one. With 200 however, the density (amateurs per
repeater) can sometimes be quite low. You would be well advised to bring a 70
cm handheld in order to use the National System - a network of 70 cm repeaters
running from well north of Auckland, down to Dunedin in the south island.

If you can e-mail me directly, I can FAX you a set of repeater maps for the
country. Alternatively, you can buy a 1994 NZART Callbook which will have
this information in it (and a lot more). NZART is the national association
for amateurs. The callbook can be bought from NZART Headquarters in Upper
Hutt, by person, by mail, or from one of the large electronics stores in the
country (e-mail me if you need more information).

2 metre repeater offsets are +/- 600 kHz, 70 cm offsets are 5MHz. 2 metres
runs from 144-148, and 70cm from 430 to 449.750 MHz. The repeaters in 70 cm
are in the bottom 10 MHz (outputs between 438 and 440 unless the repeater is
inverted for a special reason). Check your US handheld for compatibility
before you leave home... All repeaters are "open" in New Zealand. None have
tone access, and repeater callsigns are unnecessary. Repeaters are owned and
operated by Branches of NZART, which are local amateur clubs in their own

right.

You shouldn't have trouble using packet in the country. Digipeaters seem to be everywhere, although the enlightened few have put in some specialised data repeaters. Data forwarding up and down the country is by way of a combination of digipeater traffic and forwarding up the National System after midnight.

Anything I need to add ? Oh yes, have fun, that's the object isn't it ?

Stephen McNeill ZL4HG
NZART Councillor

>fair grumbling if your HT gets taken away and you receive a NAL.

1: If you read the original post, you would have known that there were
no ham repeaters in reach.

2: If you had read the original post, you would have known that the HT
was confiscated by the sherriff's office, which has no legal authority
to do so.

3: Do you know for a fact that this ham was carrying a cell phone? If
he was not (I don't know if he was either) then the cell site would be a
moot point, since HT's dont work with cell sites.

4: There is a good chance that even if the ham was carry a cell phone,
it would have been as useless as the ham band, if not more so. The
sherriff's office had arranged full coverage of the are by their repeater
out of necessity. Both ham repeaters and cell phones are luxury items,
so maybe not as much effort was made to get the coverage. Cell sites are
purposely short-ranged anyway.

I await your reply.

The following is a QST

A killer quake in Japan, floods in California and a missing yachtsman is found. All these ham radio stories and more on Newsline report number 910 coming your way right now!

(*****
JAPAN QUAKE

Ham radio operators around the world are being asked not to try to send messages into the earthquake ravaged city of Kobe Japan. This is because these is no way to get these messages delivered at this time. For hams in the United States wanting to provide assistance the problem is even bigger. This, since no bi-lateral third party traffic agreement exists between the United States and Japan. As such, United States hams are barred from handling any form of health and welfare messages until and unless both nations declare a need for amateur radio to get involved.
By way of background, on Sunday Morning January 16th here in the USA, the city of Kobe was rocked by a 7 dot 2 magnitude trembler. The devastation in that city is wide-spread. The casualty list as of Wednesday January 18th says that 3000 are dead and at least another 1000 are still missing. At least 40,000 are homeless and these figures are expected to rise as rescue efforts continue.
As we go to air, CNN reports that much of Kobe is without public utilities. This includes telephones and electricity and the situation could remain that way for several weeks. As a result, most hams in the Kobe region are off the air. Those few who do have power and whose equipment survived the quake are probably involved in providing inter-city communications within Japan. They cannot be bothered handling health and welfare requests from outside the country until such time as the immediate emergency is past.
Once again, if you live outside of the United States and you are being requested to send traffic to Japan, please hold all messages until such time as word comes from Japan that these messages can be delivered. If you live in the United States please wait until you are told by the FCC that a temporary third party agreement has been put in place to permit emergency traffic to Japan. As we go to air, no such order has been issued by the FCC.

(*****
YACHTSMAN FOUND

Some good news. Ernie Nievera, N2MBC reports that missing yachtsman Tony Wee, WZ7B who left San Diego on December 1st has turned up safe in Hilo, Hawaii on January 7th. Tony was presumed missing after loosing regular contact with the Maritime Mobile Net.
As it turned out, Tony had trouble charging his batteries and could not use any electronic equipment including his High

Frequency ham transceiver.
N2MBC says in his packet report that Tony has scrapped his voyage for the Philippines and selling the boat in Hawaii. Until he turned up in Hilo, boaters along the US West Coast had thought WZ7B was shipwrecked somewhere off Baja California, Mexico.

(*****
2310 MHz REALLOCATED

Word that the FCC has voted to allocate spectrum from 2310 to 2360 MHz for a new satellite digital audio radio service. This band is part of spectrum from 2300 to 2450 MHz, all of which is currently allocated to the Amateur and Amateur Satellite Services in ITU Region 2 on a secondary basis. This, with the exception of 2310 to 2390 MHz which is restricted from use by hams.
The FCC says the new audio service will allow direct satellite to ground radio to areas of the country and to minority and ethnic groups that are inadequately served by traditional, terrestrial radio.
The Commission notes that service and licensing rules for the new allocation will be addressed in a later rule making.

(*****
OFF THE AIR

Word that health and welfare station K4CG is shutting down due to federal budget cutbacks. K4CG is located in Alexandria, Virginia. It was formerly known as NMH and was the site of the Headquarters for the United States Coast Guard radio station.

(*****
BOY SCOUT NET

The Boy Scouts of America has established a new net called BSA Net International. It meets every Sunday at 20:30 UTC on 14.290 MHz. KB8OCC will act as net control.

(*****
10-10 CONVENTION

The 10-10 International net Inc. will hold its convention in Tuscaloosa, Alabama on June 16th and 17th. Information is available from K4CIH for a business size SASE or packet from K4CIH at the KD4CIF packet BBS.

(*****
IRAQ HAM CONVENTION

Also on the convention scene, Adel Aswad, YI1FC says that Iraq is planning to hold a world-wide amateur radio convention in March. He says his government wants invite all active radio amateurs around the world to attend the gathering. With Iraqi

strongman Saddam Hussein still running Iraq, it will be interesting to see who from outside that nation accepts the invitation.

(*****
AMSAT-NA JOINS WORLD-WIDE WEB

Turning to the Newsline science page, word that the amateur radio space program has a new communications tool that will eventually benefit all hams. Here is what it is and how it works. AMSAT-North America has joined the World Wide Web service on the Internet. This new pilot project will make available a variety of hypertext documents, pictures, video, and audio materials related to the amateur satellite program. Users will need a computer with an Internet connection and a special browser program. The Web presents a very friendly, easy to use interface to a wealth of information on AMSAT's new server and on thousands of other servers worldwide. Graphical browser programs such as "Mosaic" are freely available for many popular computers, including the PC running Windows or OS/2, the Macintosh, and UNIX machines using the X Window System. Text mode browser programs, such as Lynx, are freely available for text terminals attached to host computers. The project also joins the AMSAT.ORG mailing lists as a service of the Electronic Publishing department of AMSAT-NA.
More information on this World Wide Web project is available directly from Amsat North America or your local Amsat area coordinator.

(*****
TRAKBOX FIRMWARE FIX

As most active satellite Trak Box users must know by now, here is a bug in firmware versions 3.30a through 3.30h. The problem relates to the clock settings now that we are in the year 1995 and became apparent at midnight on December 31, 1994. A new code to fix the problem is available from various sources for the benefit of those users who have programming capability. The code will be posted on the KO-23 and KO-25 satellites as soon as the birds are back in normal service. Meanwhile, Track Box users can also find the new operating code in DL5 of the HAMNET Special Interest Group on Compuserve. For those Track Box users not having programming capability, Tucson Amateur Packet Radio is taking orders for new ROMs for your Trak Box. Please contact that organization for more information on any charges and availability.

(*****
DX

In DX word that Seborgia may soon be on the air again. This in a fax received by several DX newsletters from 3A2LZ who states he

has received operating permission for 1995. Look for him as IK/3A2LZ/1P0D usually on weekends operating CW and RTTY until the battery in his laptop computer runs out.
Also, DU9RG, has announced that plans are being made for a Spratley Island operation around April 10th to the 16th. The callsign that will be used is DU0K. No other information was made available as we go to air. Also a reminder that Spratly is a disputed territory and is claimed by several countries.

(*****
OMEGA RADIO MOVE

This note to those who listen to Newsline by satellite rebroadcast over the Omega Radio Network. Word that Omega radio will be moving to a new satellite and transponder in two weeks. Effective February 1st, look for programming like the Friday Night Live TVRO Show, This Week in Amateur Radio and Spectrum on the Telstar 302 communications satellite on Channel 21. Again, the change in satellites and transponders for hobby radio programming of the Omega Radio Network takes place on February 1st. Look for it on Telstar 302 on Channel 21.

(*****
A CASE OF HONOR

And finally, here is a sad tale as reported by Tony Breathmach, EI5EM over in Dublin, Ireland, which would leave a sour taste to any serious DX operator. A blatant request for a bogus QSL card for DXCC credit!
According to a packet radio dispatch from the Irish Amateur Radio Association, EI5EM says that after a recent CW QSO with a European Station on 80 meters he received a package direct to his address. A correct QSL card was enclosed for the 80 meter contact, but also included was a card for a CW QSO on 160 meters that Tony says never took place. A blank third party QSL card was also enclosed for a special event Marconi Station QSO. Also included was a note specifically requesting a QSL card for the fictitious QSO on 160 meters. The note said it was needed for 8 Band DXCC as 160 meter QSO's with EI prefix stations are particularly difficult.
But it gets worse still. EI5EM says that the operator also supplied a list of blank QSL's in addition to the special event one enclosed. Tony said it was obvious to him that these would become available if the 160 meter QSL was sent.
But we can all be very proud of EI5EM. Tony filled out only the legitimate QSL card and returned the other two cards with appropriate comments. Among the rare cards available from the operator in question were HB0, IS0, 4U1ITU, UA0, 4K1, 7X2 and numerous others.
But here is the real kicker. Tony says that printed in bold type on the rogue operators QLC card were the words "DXCC Honor

Roll".

(*****

And for this week, that's all from the Amateur Radio Newsline.

We've had this problem with Radio Shack as well. They will not let us
advertise our exam sessions, classes etc, even though the manager of one
of our local Radio Shacks is a ham himself. Apparently there is some sort
of (misguided) company policy that is system-wide and prohibits this sort
of thing. I guess they think if they help us they'll have to help the
CBers, computer user groups etc etc and so they won't do it for anybody.
You might try the local access bulletin-board on your cable TV system to
get some wide-area publicity. We've had good luck with that...in fact
that was how I got hooked up with the local ham club to take MY first
exam. 73 - Alan NS0B

CTP is a marine radio station in Portugal. What you actually heard was
QSX 4 8 12 16 MHz AR, indicating that it was open for traffic in the
calling segments of the 4, 8, 12 and 16 MHz marine bands.

Lots of comments are quite correct. The radio manufacturers do not want to be the sole provider of a ground path for other equipment in the auto. So a fuse is placed into the ground lead. Also this has some benefit for radio's with reverse polarity protection diodes too. In my auto the battery lead is number 10 stranded wire. I have a 60 amp fuse about 5 inches from the battery connection, then I continue to use the normal radio power line fuses,at the barrier terminal strip within the passenger compartment.

Surely you can just cut the negative fuse out of the circuit, have seen one of these radio's, did not think copper on circuit boards could be blown off the glass so easily

Nice commentary on the reasons for grounding, but responding to your
p.s.: in simple terms, I understand that lightning, being static
electricity, is a surface charge. Therefore, if you are inside the
metal body of a car, you are more or less protected. Woe unto
convertables <grin>.

I want to thank all the people who responded (14 responses received as
I write this). Rather than quote a lot of levels of quotes, I'll
unpack two comments and add a few comments of my own:

In article <1995Jan26.133159.5317@ke4zv.atl.ga.us>, gary@ke4zv.atl.ga.us
(Gary Coffman) writes:
> The reason for the fuse in the ground lead is so that if the strap connection
> from the battery to the frame fails (and this happens fairly often due to
> corrosion), vehicle power won't flow *through* your radio from the RF ground
> connection back to the battery.

Others mentioned this. Some said that a direct connection to the battery
negative wasn't necessary, but *if* it is used the fuse is essential,
for this reason.

On 26 Jan 95 10:41:14 EST Carl Morgan (clmorgan@miavx3.mid.muohio.edu) wrote
in rec.radio.amateur.misc:
: Presuming the ground strap to be broken (I've NEVER had one break in 40+
: years of using cars), how could you get 200A to flow thru the #16 or #14
: wire commonly used in a radio hookup?
: Even if it did, why could it "toast" the radio if the radio case and coax
: shield are both connected to ground?

I haven't ever had a ground strap break, but I've had starter problems
traced to relatively high resistance connections in the ground return
path or the negative lead to the battery so often that the first thing
I thing of trying when I have starting problems is tapping on the
battery connectors with a wrench.
I think Gary's explanation is basically correct, and although the current
wouldn't flow through the radio itself, it could very well flow
through the places where the radio chassis and antenna ground are in
contact with the chassis, possibly damaging the coax and scorching
some paint. Sure, you wouldn't get 200 amps to flow, but that might be
worse -- the current might not be enough to crank the starter and you
might end up running a smaller current through your coax braid or the
negative lead for a longer time, perhaps long enough to melt something
or make something under the hood (near the by-now-flooded carburetor)
red hot. Maybe the car wouldn't catch fire, but there would be some mess
to clean up.

Thanks to all who responded. Next time I install a mobile I will either
only ground it through the frame of the car *or* if it is high power
I will run two fused wires to the battery.

Kevin, I agree with Marc. Fourty meters can be a great band. Yes propagation is a bit strange in this part of the sunspot cycle but there are still opportunities. As a Novice, my technique was to get as close to a broadcast carrier as my filters would allow and call CQ. I could always find space that way and got lots of contacts.

Given the current 40m propagation conditions though, you might consider 80m. If you stick with 40m you might try a digital audio filter. They do a great job of taking out the AM carrier whistle (heterodyne). I bought one from Radio Shack at a hamfair for $79. It may not be the most sophisticated unit but the price was right <grin>. The price is a bit higher in the stores now but still cheap.

Have fun!

Sounds like a Portuguese coast station to me ! The callsigns conform to the
same ITU allocations as amateur ones, so it's generally easy to work out
where they are coming from. Bear in mind though, that you will hear some
prefixes used in the marine bands that are not used in the amateur service,
like M which is used by the UK.

Hi all:

Here's an amended version of RAC SPECIAL NEWS BULLETIN 02-95 that I sent you last Monday. The title of that bulletin was incorrectly given as "EMCAB-2 PUT ON HOLD". The correct title, as shown below, should have been "EMCAB-2 APPLICATION PUT ON HOLD

What's in a word? Quite a lot! Jim Dean VE3IQ, RAC Vice-President Government Affairs, points out that EMCAB-2 is still alive and out there, but IC has agreed not to apply it to interference cases until they get their procedures developed, the measuring equipment bought, etc. He adds that maybe that will never happen, but we have to keep up the fight to have EMCAB-2 withdrawn.

73,

Steve VE3GRS

SB RAC @ CANADA < VA3RAC $RAC_9501.28
RAC SPECIAL NEWS BULLETIN 02A-95 AMENDED INTERNET EDITION
28 JANUARY 1995
Issued at RAC Administrative Office
614 nNorris Court, Unit 6
Kingston, ON K7P 2R9
Editor: Cam Inglis VE3UXN <CAMERON.INGLIS@GTM-INC.COM>
Internet Transmission: Steve Cutway VE3GRS <CUTWAYS@QUCDN.QUEENSU.CA>

EMCAB-2 APPLICATION PUT ON HOLD

The President of RAC, Farrell Hopwood, VE7RD, is pleased to announce that following consultations with RAC, officials at Industry Canada have placed the application of EMCAB-2 on hold until further notice.

At a meeting on 25 November, 1994, with Mr. Michael Binder, Assistant Deputy Minister (Spectrum, Information Technologies and Telecommunications), RAC Executive members Jim Dean, VE3IQ, and Ken Pulfer, VE3PU, again voiced opposition to EMCAB-2, Issue 1, and expressed particular concern that the document had been released before completion of the development of measurement procedures, acquisition of measuring equipment and preparation of guidance to field offices on the application of EMCAB-2.

Mr. Mike Connolly, Director, Spectrum Management Operations, noted that EMCAB-2 was intended to be an instrument for use as a last resort in resolving interference problems, but acknowledged RAC's concerns that under the circumstances there was potential for premature and improper application. RAC

has been advised that instructions were issued to Industry Canada's Regional Offices in mid-December that use of EMCAB-2 is to be put on hold until further notice.

RAC will continue to press for the withdrawal of EMCAB-2, Issue 1. In the meantime, radio amateurs should report any application of EMCAB-2 to interference problems to RAC's Vice-President of Government Affairs, James Dean, VE3IQ.

This is an offer for a private newsletter which is an advertisement, right?
An offer to subscribe to advertising is, IMHO, an advertisement in its
own right. The real crux here is the motive behind your postings--it's to
market a product, plain and simple. As far as responding via private e-mail,
well, I hope that my postings will prompt others to complain about what you
are trying to do here. If we let you get started, then we may as well open
the floodgates net-wide. Wouldn't that be a pretty sight--junk e-mail by
the megabyte...

There's also no charge for a ham plate in Rhode Island. But there is one interesting thing about it. A ham plate in RI is what's known to the DMV as a type 18, regular and vanity plates are type 01's. Police departments here don't know the difference. One night a friend of mine was sick and parked his truck left wheels to the curb in front of his home. At 2AM he was awakened by a police officer wanting to know who's vehicle it was and why nothing came back when he called in the registration. Seems the dispatcher on the other end keyed the plate in as a type 01.

As another example of the ineptitude of the Providence Police Department I'll tell you about the friend who's car gets regular parking tickets but never a summons to appear for outstanding tickets. Why? The meter molly writes the one on his plate as an I (Ie. KD1NR becomes KDINR).

Of course this is typical in Rhode Island.

I recently posted a reply to the AMSOFT spam telling them that
instead of asking for a copy of their thinly disguised advertisement
for their CD-ROM, I was sending a copy of their message to their
system administrator.

I sent that message to all the newsgroups AMsoft spammed because most
everywhere their original message went, there are people talking about
burying the instigators under a deluge of email. This will clog the
network and may well cause the people doing it to lose their access.

As I said in the message, the thing to do is to send a message
to their system administrator, which I did, with a copy to AMSOFT.
(The ALL CAPS warning not to send me their ad was to prevent them
from sending me more of their junk mail because of that copy.)

I presume that most people already know this, but a cursory review of the
responses to their luncheon meat attack shows that a lot of people don't.

To repeat (and clarify), the proper response to any kind of spamming
and especially to a _commercial_ spam is to send a copy of the
message to the miscreant's system administrator along with a note
describing the problems they're causing. This is almost always
